Canon

OCTOBER 2008
REV. 0

Application

This manual has been issued by Canon Inc. for qualified persons to learn technical theory, installation, maintenance, and repair of products. This manual covers all localities where the products are sold. For this reason, there may be information in this manual that does not apply to your locality.

Corrections

This manual may contain technical inaccuracies or typographical errors due to improvements or changes in products. When changes occur in applicable products or in the contents of this manual, Canon will release technical information as the need arises. In the event of major changes in the contents of this manual over a long or short period, Canon will issue a new edition of this manual.

The following paragraph does not apply to any countries where such provisions are inconsistent with local law.

Trademarks

The product names and company names used in this manual are the registered trademarks of the individual companies.

Copyright

This manual is copyrighted with all rights reserved. Under the copyright laws, this manual may not be copied, reproduced or translated into another language, in whole or in part, without the written consent of Canon Inc.

Caution

Use of this manual should be strictly supervised to avoid disclosure of confidential information.

Symbols Used

This documentation uses the following symbols to indicate special information:

Symbol	Description
	Indicates an item of a non-specific nature, possibly classified as Note, Caution, or Warning.
	Indicates an item requiring care to avoid electric shocks.
	Indicates an item requiring care to avoid combustion (fire).
	Indicates an item prohibiting disassembly to avoid electric shocks or problems.
	Indicates an item requiring disconnection of the power plug from the electric outlet.
Memo	Indicates an item intended to provide notes assisting the understanding of the topic in question.
REF.	Indicates an item of reference assisting the understanding of the topic in question.
	Provides a description of a service mode.
	Provides a description of the nature of an error indication.

The following rules apply throughout this Service Manual:

1. Each chapter contains sections explaining the purpose of specific functions and the relationship between electrical and mechanical systems with reference to the timing of operation.
In the diagrams,  represents the path of mechanical drive; where a signal name accompanies the symbol, the arrow  indicates the direction of the electric signal.
The expression "turn on the power" means flipping on the power switch, closing the front door, and closing the delivery unit door, which results in supplying the machine with power.
2. In the digital circuits, '1' is used to indicate that the voltage level of a given signal is "High", while '0' is used to indicate "Low". (The voltage value, however, differs from circuit to circuit.) In addition, the asterisk (*) as in "DRMD*!" indicates that the DRMD signal goes on when '0'.
In practically all cases, the internal mechanisms of a microprocessor cannot be checked in the field. Therefore, the operations of the microprocessors used in the machines are not discussed: they are explained in terms of from sensors to the input of the DC controller PCB and from the output of the DC controller PCB to the loads.

The descriptions in this Service Manual are subject to change without notice for product improvement or other purposes, and major changes will be communicated in the form of Service Information bulletins.

All service persons are expected to have a good understanding of the contents of this Service Manual and all relevant Service Information bulletins and be able to identify and isolate faults in the machine."

Contents

Chapter 1 Introduction

1.1 System Construction	1- 1
1.1.1 System Configuration of Pickup/Delivery Options.....	1- 1
1.2 Product Specifications	1- 2
1.2.1 Names of Parts	1- 2
1.2.1.1 External View.....	1- 2
1.2.1.2 Cross Section	1- 3
1.2.2 Using the Machine	1- 4
1.2.2.1 Turning on the Power Switch.....	1- 4
1.2.2.2 Control Panel.....	1- 5
1.2.2.3 Control Panel.....	1- 6
1.2.3 User Mode Items	1- 7
1.2.3.1 Overview	1- 7
1.2.3.2 Paper Settings.....	1- 7
1.2.3.3 Volume Settings	1- 7
1.2.3.4 Common Settings	1- 8
1.2.3.5 Communications Settings *3.....	1- 9
1.2.3.6 Address Book Settings.....	1- 11
1.2.3.7 Printer Settings.....	1- 13
1.2.3.8 Timer Settings	1- 15
1.2.3.9 Adjustment/Cleaning	1- 16
1.2.3.10 Report Settings	1- 16
1.2.3.11 System Management Set.....	1- 17
1.2.4 Maintenance by the User	1- 25
1.2.4.1 Cleaning	1- 25
1.2.5 Safety	1- 28
1.2.5.1 Points to note at disassembly/assembly	1- 28
1.2.5.2 CDRH Regulations	1- 28
1.2.5.3 Safety of the Laser Light.....	1- 28
1.2.5.4 Handling the Laser Unit	1- 28
1.2.5.5 Safety of Toner.....	1- 29
1.2.5.6 Notes when handling a battery	1- 29
1.2.6 Product Specifications	1- 30
1.2.6.1 Main Body Specifications	1- 30
1.2.6.2 Main Body Specifications	1- 31
1.2.6.3 ADF Specifications	1- 33
1.2.6.4 FAX Specifications	1- 34
1.2.7 Function List.....	1- 35
1.2.7.1 Print Speed	1- 35
1.2.7.2 Print Speed	1- 36
1.2.7.3 Paper Type	1- 37

Chapter 2 Basic Operation

2.1 Construction.....	2- 1
2.1.1 Functional Configuration.....	2- 1
2.1.2 Connecting the Main PCBs	2- 2
2.2 Basic Sequence	2- 3
2.2.1 Basic Sequence of Operation	2- 3
2.2.2 Power-On Sequence	2- 4

Chapter 3 Main Controller

3.1 Overview/Configuration	3- 1
3.1.1 Overview	3- 1
3.1.2 Configurations/functions	3- 2
3.2 Set-Up Sequence	3- 4
3.2.1 Overview	3- 4
3.2.2 Startup Sequence	3- 5
3.3 Image Processing.....	3- 6
3.3.1 Overview of the Image Flow	3- 6
3.3.2 Construction of the Image Processing Module	3- 6
3.3.3 Reader Unit Input Image Processing.....	3- 7
3.3.4 Compression/ Extesion/ Editing Block.....	3- 7
3.3.5 Printer unit Output Image Processing	3- 8
3.4 Image Data Flow.....	3- 9
3.4.1 Flow of Image Data According to Copy Functions	3- 9
3.4.2 Flow of Image Data for the SEND Function	3- 10
3.4.3 Flow of Image Data for the Fax Transmission	3- 10
3.4.4 Flow of Image Data for the Fax Reception Function.....	3- 11
3.4.5 Flow of Image Data for the PDL Function.....	3- 11
3.5 Parts Replacement Procedure	3- 12
3.5.1 Main Controller PCB	3- 12
3.5.1.1 Before Removing the Main Controller PCB	3- 12
3.5.1.2 Removing the Main Controller PCB	3- 12
3.5.1.3 Procedure after Replacing the Main Controller PCB	3- 12

Chapter 4 Original Exposure System

4.1 Basic Construction.....	4- 1
4.1.1 Overview	4- 1
4.1.2 Major Components	4- 1
4.2 Basic Sequence	4- 3
4.2.1 Basic Sequence of Operation at Power-on	4- 3
4.2.2 Basic Sequence of Operation in Response to a Press on the Start Key (book)	4- 4
4.3 Various Control	4- 5
4.3.1 Lamp Control.....	4- 5
4.3.1.1 Overview	4- 5
4.3.2 Enlargement/Reduction.....	4- 6
4.3.2.1 Overview	4- 6
4.3.3 Detecting the Size of Originals.....	4- 6

4.3.3.1 Overview	4- 6
4.3.4 Dirt Sensor Control	4- 7
4.3.4.1 Overview	4- 7
4.3.4.2 Stream Reading Position Shift	4- 7
4.4 Parts Replacement Procedure	4- 8
4.4.1 ADF Unit + Reader Unit	4- 8
4.4.1.1 Before Removing the ADF Unit + Reader Unit	4- 8
4.4.1.2 Removing the ADF Unit + Reader Unit	4- 8
4.4.1.3 Procedure after Replacing the ADF Unit	4- 10
4.4.1.4 Procedure after Replacing the Reader Unit	4- 10
4.4.2 Reader Unit	4- 10
4.4.2.1 Before Removing the Reader Unit	4- 10
4.4.2.2 Removing the Reader Unit	4- 10
4.4.2.3 Procedure after Replacing the Reader Unit	4- 11

Chapter 5 Original Feeding System

5.1 Basic Construction	5- 1
5.1.1 Overview	5- 1
5.2 Basic Operation	5- 3
5.2.1 Operation Mode	5- 3
5.2.2 Document Size Detection	5- 5
5.3 Detection Jams	5- 6
5.3.1 Overview	5- 6
5.4 ADF/DADF	5- 7
5.4.1 ADF/DADF	5- 7
5.4.1.1 Removing the ADF unit	5- 7
5.4.1.2 Procedure after Replacing the ADF Unit	5- 8
5.4.2 Pickup Feed Unit	5- 8
5.4.2.1 Removing the ADF Pickup Feed Unit	5- 8
5.4.3 Pick-up Roller	5- 10
5.4.3.1 Removing the ADF Pickup Roller	5- 10
5.4.4 Separation Roller	5- 11
5.4.4.1 Removing the ADF Separation Roller	5- 11
5.4.5 Pick-up Motor	5- 12
5.4.5.1 Before Removing the ADF Pickup Motor	5- 12
5.4.5.2 Removing the ADF Pickup Motor	5- 12
5.4.6 Pick-up Solenoid	5- 13
5.4.6.1 Before Removing the ADF Pickup Solenoid	5- 13
5.4.6.2 Removing the ADF Pickup Solenoid	5- 13
5.4.7 Separation Pad	5- 14
5.4.7.1 Removing the ADF Separation Pad	5- 14

Chapter 6 Laser Exposure

6.1 Overview/Configuration	6- 1
6.1.1 Overview	6- 1
6.2 Controlling the Laser	6- 3
6.2.1 Overview	6- 3

Contents

6.2.2 Laser Light Emission Control.....	6- 4
6.2.3 Laser Light Intensity Control	6- 4
6.2.4 Image Masking Control.....	6- 4
6.2.5 Failure Detection.....	6- 4
6.3 Controlling the Laser Scanner Motor.....	6- 5
6.3.1 Overview	6- 5
6.3.2 Failure Detection.....	6- 5
6.4 Parts Replacement Procedure	6- 6
6.4.1 Laser/Scanner Unit	6- 6
6.4.1.1 Before Removing the Laser Scanner Unit	6- 6
6.4.1.2 Removing the Laser Scanner Unit	6- 6

Chapter 7 Image Formation

7.1 Overview/Configuration	7- 1
7.1.1 Overview	7- 1
7.1.2 Print Process	7- 2
7.1.3 Electrostatic Latent Image Formation Block.....	7- 3
7.1.4 Development Block.....	7- 4
7.1.5 Transfer Block	7- 4
7.1.6 Fixing Block	7- 6
7.1.7 Cleaning Block	7- 6
7.2 Image Stabilization Control	7- 7
7.2.1 Overview	7- 7
7.2.2 Environmental Change Corrective Control.....	7- 8
7.2.3 D-half Control	7- 9
7.2.4 Color Displacement Corrective Control.....	7- 11
7.2.5 Auto Gradation Correction Control.....	7- 14
7.3 Toner Cartridge	7- 15
7.3.1 Overview	7- 15
7.3.2 Toner Level Detection	7- 16
7.3.3 Memory Tag Control.....	7- 16
7.3.4 Toner Cartridge Detection	7- 16
7.3.5 New Toner Cartridge Detection	7- 17
7.3.6 Developing Cylinder Engagement/disengagement Control	7- 18
7.4 Transfer Unit	7- 19
7.4.1 ETB Unit	7- 19
7.4.2 Automatic Bias Control	7- 20
7.4.3 ETB Cleaning	7- 21
7.4.4 Transfer Roller Engagement/disengagement Control	7- 22
7.5 Parts Replacement Procedure	7- 26
7.5.1 Drum Motor	7- 26
7.5.1.1 Before Removing the Drum Motor	7- 26
7.5.1.2 Removing the Drum Motor	7- 26
7.5.2 Main Drive Unit	7- 26
7.5.2.1 Before Removing the Main Drive Unit	7- 26
7.5.2.2 Removing the Main Drive Unit	7- 26
7.5.2.3 Point to Note When Installing the Main Drive Unit	7- 28
7.5.3 Developing Estrangement Solenoid.....	7- 30

7.5.3.1 Before Removing the Developing Disengage Solenoid	7- 30
7.5.3.2 Removing the Developing Disengage Solenoid	7- 30
7.5.3.3 Points to Note When Installing the Developing Disengage Solenoid	7- 31
7.5.4 ETB Unit	7- 31
7.5.4.1 Removing the ETB Unit	7- 31
7.5.5 ETB Motor	7- 32
7.5.5.1 Before Removing the ETB Motor	7- 32
7.5.5.2 Removing the ETB Motor	7- 32
7.5.6 ETB Estrangement Solenoid	7- 33
7.5.6.1 Before Removing the ETB Disengage Solenoid	7- 33
7.5.6.2 Removing the ETB Disengage Solenoid	7- 33
7.5.7 Color Displacement/Image Density Sensor	7- 34
7.5.7.1 Before Removing the Color Displacement/Density Sensor	7- 34
7.5.7.2 Removing the Color Displacement/Density Sensor	7- 34

Chapter 8 Pickup and Feed System

8.1 Overview/Configuration	8- 1
8.1.1 Overview	8- 1
8.1.2 Interval Speed Increase Control	8- 3
8.2 Other Control	8- 4
8.2.1 Cassette Pickup Mechanism	8- 4
8.2.2 Manual Feed Pickup Mechanism	8- 5
8.2.3 Skew Correction	8- 6
8.2.4 Throughput-down Control	8- 7
8.2.5 Throughput-down Control	8- 8
8.2.6 Feeding Speed Control	8- 9
8.2.7 Feeding Speed Control	8- 9
8.2.8 Warp Control	8- 9
8.2.9 Delivery	8- 11
8.3 Detection Jams	8- 13
8.3.1 Jam Detection Outline	8- 13
8.3.1.1 Overview	8- 13
8.3.2 Delay Jams	8- 13
8.3.2.1 Pickup Delay JAM	8- 13
8.3.2.2 Delivery Delay JAM	8- 13
8.3.2.3 Duplexing Pickup Delay JAM	8- 13
8.3.2.4 Duplexing Reverse Unit Delay JAM	8- 13
8.3.3 Stationary Jams	8- 14
8.3.3.1 Pickup Stationary JAM	8- 14
8.3.3.2 Delivery Stationary JAM	8- 14
8.3.4 Other Jams	8- 14
8.3.4.1 Wrapping JAM	8- 14
8.3.4.2 Residual JAM	8- 14
8.3.4.3 Door Open JAM	8- 14
8.3.4.4 Automatic Delivery Function	8- 14
8.4 Duplex Feeding	8- 15
8.4.1 Overview	8- 15
8.4.2 Duplexing Feed Control	8- 16

Contents

8.4.3 Duplexing Pickup Operation	8- 19
8.5 Parts Replacement Procedure	8- 20
8.5.1 Pickup Feed Unit	8- 20
8.5.1.1 Before Removing the Pickup Feed Unit.....	8- 20
8.5.1.2 Removing the Pickup Feed Unit.....	8- 20
8.5.2 Cassette Pickup Roller	8- 21
8.5.2.1 Before Removing the Cassette Pickup Roller.....	8- 21
8.5.2.2 Removing the Cassette Pickup Roller.....	8- 21
8.5.3 Pickup Motor	8- 22
8.5.3.1 Before Removing the Pickup Motor	8- 22
8.5.3.2 Removing the Pickup Motor.....	8- 22
8.5.4 Cassette Pickup Solenoid	8- 23
8.5.4.1 Before Removing the Cassette Pickup Solenoid.....	8- 23
8.5.4.2 Removing the Cassette Pickup Solenoid.....	8- 23
8.5.5 Cassette Separation Pad	8- 25
8.5.5.1 Removing the Cassette Separation Pad.....	8- 25
8.5.6 Manual Pickup Roller.....	8- 25
8.5.6.1 Before Removing the Manual Feed Pickup Roller	8- 25
8.5.6.2 Removing the Manual Feed Pickup Roller	8- 25
8.5.7 Manual Pickup Solenoid.....	8- 25
8.5.7.1 Before Removing the Manual Feed Pickup Solenoid	8- 25
8.5.7.2 Removing the Manual Feed Pickup Solenoid	8- 25
8.5.8 Manual Separation Roller	8- 27
8.5.8.1 Before Removing the Manual Feed Separation Pad	8- 27
8.5.8.2 Removing the Manual Feed Separation Pad	8- 27
8.5.9 Duplexing Feed Motor	8- 28
8.5.9.1 Before Removing the Duplex Feed Motor	8- 28
8.5.9.2 Removing the Duplex Feed Motor	8- 28
8.5.10 Reverse Unit	8- 28
8.5.10.1 Before Removing the Reversal Unit	8- 28
8.5.10.2 Removing the Reversal Unit	8- 28
8.5.11 Reverse Motor	8- 30
8.5.11.1 Before Removing the Reversal Motor	8- 30
8.5.11.2 Removing the Reversal Motor	8- 30
8.5.12 Reverse Solenoid	8- 30
8.5.12.1 Before Removing the Reversal Solenoid.....	8- 30
8.5.12.2 Removing the Reversal Solenoid.....	8- 30

Chapter 9 Fixing System

9.1 Overview/Configuration	9- 1
9.1.1 Overview	9- 1
9.2 Various Control Mechanisms.....	9- 2
9.2.1 Controlling the Temperature of the Fixing Unit.....	9- 2
9.2.1.1 Fixing Temperature Control	9- 2
9.2.1.2 Throughput Down Control	9- 3
9.2.2 Fixing Pressurizing/Release Control	9- 4
9.2.2.1 Fixing Sleeve Pressuring/releasing Control	9- 4
9.3 Protection Function.....	9- 5

9.3.1 Overview	9- 5
9.3.2 Failure Detection	9- 5
9.4 Parts Replacement Procedure	9- 6
9.4.1 Fixing Unit	9- 6
9.4.1.1 Removing the Fixing Assembly	9- 6
9.4.2 Fixing Sleeve Unit	9- 6
9.4.2.1 Before Removing the Fixing Sleeve Unit	9- 6
9.4.2.2 Removing the Fixing Sleeve Unit	9- 6
9.4.3 Fixing Drive Unit	9- 9
9.4.3.1 Before Removing the Fixing Drive Unit	9- 9
9.4.3.2 Removing the Fixing Drive Unit	9- 9
9.4.4 Fixing Motor	9- 12
9.4.4.1 Before Removing the Fixing Motor	9- 12
9.4.4.2 Removing the Fixing Motor	9- 12

Chapter 10 External and Controls

10.1 DC Controller	10- 1
10.1.1 Overview	10- 1
10.1.2 Operation of Each Block	10- 2
10.1.3 Fan/Motor Control	10- 2
10.1.4 Drum motor failure detection	10- 3
10.1.5 ETB motor failure detection	10- 3
10.1.6 Fixing motor failure detection	10- 3
10.1.7 Main Unit Fan Failure Detection	10- 3
10.1.8 Duplex Fan Failure Detection	10- 3
10.2 Control Panel	10- 4
10.2.1 Overview	10- 4
10.3 Counter	10- 5
10.3.1 Overview	10- 5
10.3.2 Timing of Increasing the Count	10- 5
10.4 Power Supply	10- 6
10.4.1 Power Supply	10- 6
10.4.1.1 Low-voltage Power Unit	10- 6
10.4.2 Protection Function	10- 7
10.4.2.1 Protective Function	10- 7
10.4.2.2 Safety	10- 7
10.4.3 Energy-Saving Function	10- 7
10.4.3.1 Overview	10- 7
10.5 Parts Replacement Procedure	10- 9
10.5.1 Front Cover	10- 9
10.5.1.1 Before Removing the Front Cover Unit	10- 9
10.5.1.2 Removing the Front Cover Unit	10- 9
10.5.2 Front Upper Cover 1	10- 10
10.5.2.1 Before Removing Front upper Cover 1	10- 10
10.5.2.2 Removing Front Upper Cover 1	10- 10
10.5.3 Rear Cover	10- 11
10.5.3.1 Removing the Rear Cover Unit	10- 11
10.5.4 Right Cover	10- 11

Contents

10.5.4.1 Before Removing the Right Cover	10- 11
10.5.4.2 Removing the Right Cover	10- 11
10.5.5 Left Cover	10- 13
10.5.5.1 Before Removing the Left Cover	10- 13
10.5.5.2 Removing the Left Cover	10- 13
10.5.6 Delivery Tray Cover	10- 14
10.5.6.1 Before Removing the Delivery Tray Cover	10- 14
10.5.6.2 Removing the Delivery Tray Cover	10- 14
10.5.7 Power Station Cover	10- 15
10.5.7.1 Before Removing the Electrical Components Cover	10- 15
10.5.7.2 Removing the Electrical Components Cover	10- 15
10.5.8 Controller Box	10- 15
10.5.8.1 Before Removing the Controller Box	10- 15
10.5.8.2 Removing the Controller Box	10- 15
10.5.9 Laser Scanner Cover	10- 16
10.5.9.1 Before Removing the Laser Scanner Cover	10- 16
10.5.9.2 Removing the Laser Scanner Cover	10- 16
10.5.10 Upper Frame Unit	10- 18
10.5.10.1 Before Removing the Upper Frame Unit	10- 18
10.5.10.2 Removing the Upper Frame Unit	10- 18
10.5.11 Operation Panel Unit	10- 21
10.5.11.1 Removing the Control Panel Unit	10- 21
10.5.11.2 Procedure after Replacing the Control Panel	10- 21
10.5.12 NCU Board	10- 22
10.5.12.1 Before Removing the NCU PCB	10- 22
10.5.12.2 Removing the NCU PCB	10- 22
10.5.13 DC Controller PCB	10- 22
10.5.13.1 Before Removing the DC Controller PCB	10- 22
10.5.13.2 Removing the DC Controller PCB	10- 22
10.5.13.3 Procedure after Replacing the DC controller PCB	10- 23
10.5.14 Memory Controller PCB	10- 23
10.5.14.1 Before Removing the Memory Controller PCB	10- 23
10.5.14.2 Removing the Memory Controller PCB	10- 23
10.5.15 Duplexing Driver PCB	10- 23
10.5.15.1 Before Removing the Duplex Driver PCB	10- 23
10.5.15.2 Removing the Duplex Driver PCB	10- 23
10.5.16 Low-voltage Power Supply PCB	10- 23
10.5.16.1 Before Removing the Low-Voltage Power Supply PCB	10- 23
10.5.16.2 Removing the Low Voltage Power Supply PCB	10- 24
10.5.17 High-voltage Power Supply PCB	10- 25
10.5.17.1 Before Removing the High Voltage Power Supply PCB	10- 25
10.5.17.2 Removing the High Voltage Power Supply PCB	10- 25
10.5.18 Off Hook PCB	10- 25
10.5.18.1 Before Removing the Off Hook PCB	10- 25
10.5.18.2 Removing the Off Hook PCB	10- 25
10.5.19 Cooling Fan	10- 26
10.5.19.1 Before Removing the Cooling Fan	10- 26
10.5.19.2 Removing the Cooling Fan	10- 26
10.5.20 Duplex Fan	10- 26

10.5.20.1 Before Removing the Duplex Fan.....	10- 26
10.5.20.2 Removing the Duplex Fan	10- 26

Chapter 11 Maintenance and Inspection

11.1 Periodically Replaced Parts.....	11- 1
11.1.1 Periodically Replaced Parts.....	11- 1
11.2 Consumables	11- 1
11.2.1 Expected Service Life of Consumable Parts.....	11- 1
11.3 Periodical Service.....	11- 1
11.3.1 Periodic Service.....	11- 1

Chapter 12 Measurement and Adjustments

12.1 Scanning System.....	12- 1
12.1.1 Procedure after Replacing the Copyboard Glass.....	12- 1
12.1.2 Procedure after Replacing the Reader Unit.....	12- 1
12.2 Fixing System.....	12- 1
12.2.1 Checking the Nip Width (fixing pressure roller)	12- 1
12.3 Electrical Components.....	12- 1
12.3.1 Procedure after Replacing the DC controller PCB	12- 1
12.3.2 Procedure after Replacing the Main Controller PCB	12- 1
12.3.3 Procedure after Clearing RAM Data.....	12- 1
12.3.4 Procedure after Replacing the Control Panel	12- 2
12.4 ADF.....	12- 2
12.4.1 Outline.....	12- 2
12.4.1.1 Procedure after Replacing the ADF Unit	12- 2

Chapter 13 Correcting Faulty Images

13.1 Initial Checkup	13- 1
13.1.1 Initial Check.....	13- 1
13.2 Test Printing	13- 2
13.2.1 Test Printing	13- 2

1.2.4 Maintenance by the User

1.2.4.1 Cleaning

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

If the original is not copied clearly, clean the machine. For high-quality printouts, we recommend cleaning the machine once or twice a month.

- Do not use alcohol, benzene, paint thinner, or other solvents for cleaning. Doing so may result in damage to the plastic parts.
- Do not use tissue paper, paper towels, or similar materials for cleaning; they can stick to the components or generate static charges.
- Disconnect the power cord from the power outlet regularly, and clean the area around the base of the power plug's metal pins and the power outlet with a dry cloth to ensure that all dust and grime is removed. If the power cord is connected for a long period of time in a damp, dusty, or smoky location, dust can build up around the power plug and become damp. This may cause a short circuit and result in a fire.

MEMO:

- You cannot send or receive documents when the main power switch is turned off or the power cord is disconnected.
- If the main power switch is turned ON, all jobs waiting in the print queue will be erased.
- Documents received into memory and documents stored for delayed send will be retained for approximately 60 minutes after the power cord has been disconnected.

Exterior

Clean the exterior of the machine.

- 1) Turn OFF the main power switch and disconnect the power cord.
- 2) Wipe the machine's exterior with a clean, soft, lint-free cloth dampened with water or diluted dishwashing detergent solution.
- 3) Wait for the machine to dry, then reconnect the power cord and turn ON the main power switch.

Interior

Clean the machine's print area periodically to prevent toner powder and paper dust from accumulating inside.

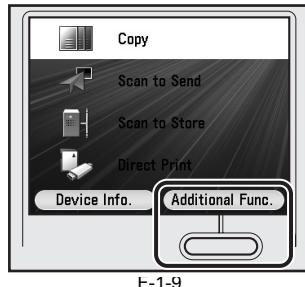

Cleaning the Fixing Unit

If black streaks appear on printed output, the fixing unit may be dirty. Also, you should use the Fixing Unit Cleaning procedure every time the toner cartridge is replaced. Print the cleaning pattern on LTR paper for cleaning the fixing unit.

MEMO:

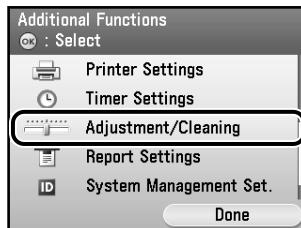

- As cleaning paper, LTR or A4 paper must be loaded in the paper drawer or the stack bypass tray.
- Cleaning the fixing unit takes approximately 60 seconds.

- 1) Press (Main Menu).
- 2) Press the right Any key to select <Additional Func>.

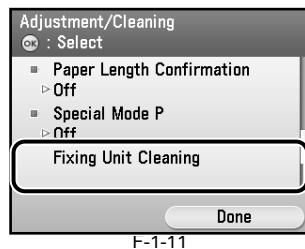

F-1-9

- 3) Use [▲], [▼], or (Scroll Wheel) to select <Adjustment/Cleaning>, then press [OK].

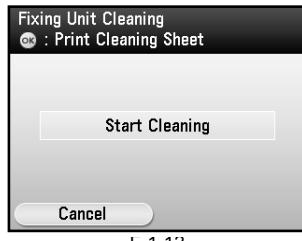

F-1-10

- 4) Use [▲], [▼], or (Scroll Wheel) to select <Fixing Unit Cleaning>, then press [OK].

F-1-11

- 5) Confirm that <Start Cleaning> is displayed, then press [OK].
Printing starts.

The display returns to the Adjustment/Cleaning screen.

MEMO:

- Discard the cleaning sheet after use.
- The cleaning process cannot be canceled. Please wait until it is completed.

6) Press (Main Menu) to return to the Main Menu screen.

Scanning Area

Keep the scanning area clean to avoid dirty copies or faxes to be sent.

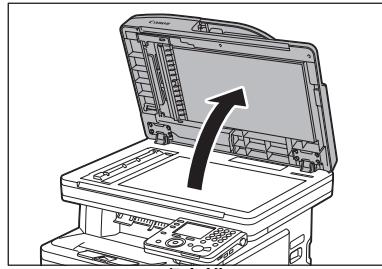

Cleaning the Platen Glass

Clean the platen glass and the underside of the feeder by following the procedure below.

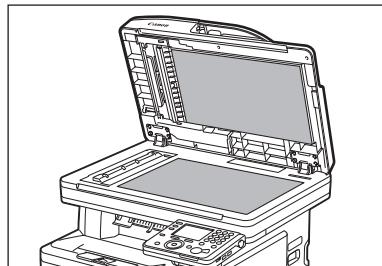

When cleaning the machine, first turn OFF the main power switch, and disconnect the power cord. Failure to observe these steps may result in a fire or electrical shock.

1) Open the feeder.

F-1-13

2) Clean the platen glass and the underside of the feeder with a cloth dampened with water. Then, wipe the area with a soft, dry cloth.

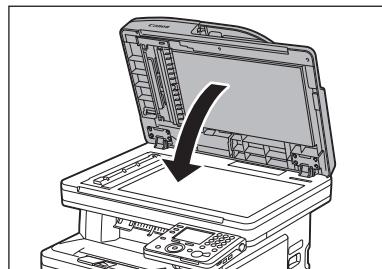

F-1-14

MEMO:

- Do not dampen the cloth too much, as this may tear the document or damage the machine.

3) Close the feeder.

F-1-15

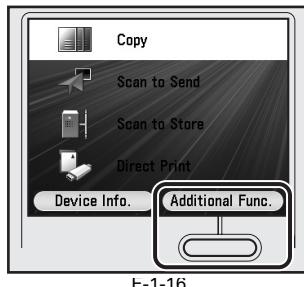

Cleaning the Feeder Automatically

If your originals have black streaks or appear dirty after scanning them through the feeder, clean the rollers of the feeder.

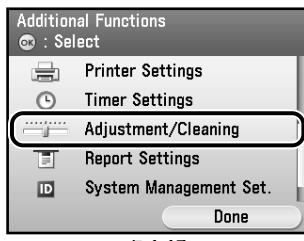

MEMO:

- Use LTR or A4 paper as cleaning paper.
- It takes approximately 30 seconds to clean the feeder.

- 1) Press (Main Menu).
 2) Press the right Any key to select <Additional Func>.

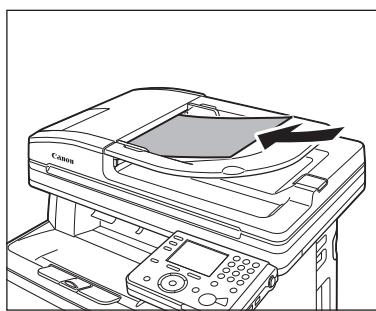

- 3) Use [▲], [▼], or (Scroll Wheel) to select <Adjustment/Cleaning>, then press [OK].

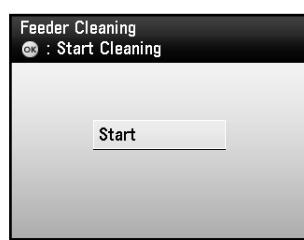

- 4) Use [▲], [▼], or (Scroll Wheel) to select <Feeder Cleaning>, then press [OK].

- 5) Place 10 sheets of blank paper into the feeder.

- 6) Confirm that <Start> is displayed, then press [OK].

The display returns to the Adjustment/Cleaning screen.

MEMO:

- Discard the cleaning sheet after use.
- The cleaning process cannot be canceled. Please wait until it is completed.

- 7) Press (Main Menu) to return to the Main Menu screen.

1.2.5 Safety

1.2.5.1 Points to note at disassembly/assembly

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

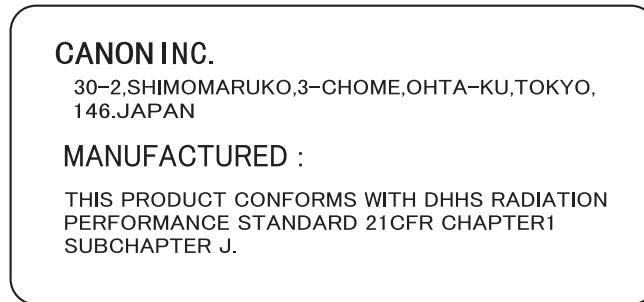

Make sure to follow the instruction below at disassembly/assembly.

1. At disassembly/assembly, be sure to unplug the power plug for safety reason.
2. At assembly, execute the operation in the reverse order of disassembly procedure.
3. Take care not to make a mistake in the type of screws (length/diameter) and their usage locations in assembly.
4. To check the electrical continuity, a screw with washer is used for the grounding wire and the varistor etc. Make sure to use this screw when attaching them.
5. Do not operate the machine without any part.
6. At disassembly, do not remove the screw with bond lock.

1.2.5.2 CDRH Regulations

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The Center for Devices and Radiological Health of the US Food and Drug Administration put into force regulations concerning laser products on August 2, 1976. These regulations apply to laser products manufactured on and after August 1, 1976, and the sale of laser products not certified under the regulations is banned within the United States. The label shown here indicates compliance with the CDRH regulations, and its attachment is required on all laser products that are sold in the United States.

F-1-21

A different description may be used for a different product.

1.2.5.3 Safety of the Laser Light

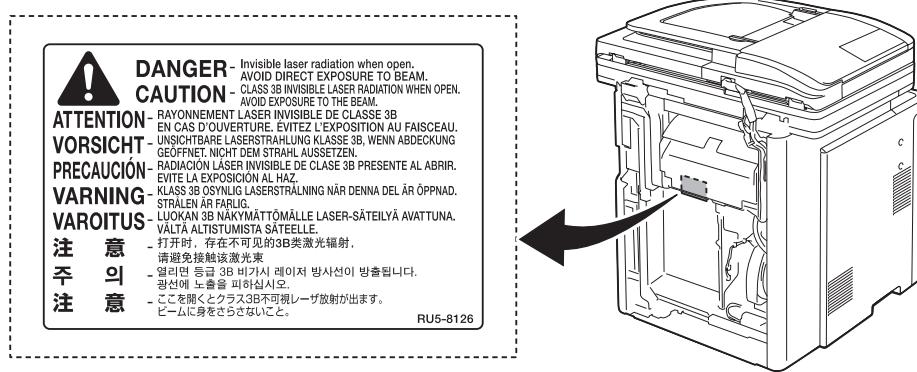

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Laser light can prove to be hazardous to the human body. The machine's laser unit is fully enclosed in a protective housing and external covers so that its light will not escape outside as long as the machine is used normally.

1.2.5.4 Handling the Laser Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The laser/scanner unit emits invisible laser beam. DO NOT disassemble the unit as the laser beam can possibly damage your eyes. The unit cannot be adjusted in the field. The following label is attached to the plate behind the unit:

F-1-22

1.2.5.5 Safety of Toner

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

About Toner

The machine's toner is a non-toxic material made of plastic, iron, and small amounts of dye.

Do not throw toner into fire. It may cause explosion.

Toner on Clothing or Skin

1. If your clothing or skin has come into contact with toner, wipe it off with tissue; then, wash it off with water.
2. Be sure to use water at room temperature for cleaning toner on clothing; Using warm water may cause the toner to jell and fuse permanently with the fibers of the cloth.
3. Do not bring toner into contact with plastic material. It tends to react easily.

Storage of copy/print output

Do not use transparent polyvinyl case.

If printed side contact with the surface of case, toner melts and the paper may be adhered with a case.

1.2.5.6 Notes when handling a battery

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE.
DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTIONS.

The following warnings are given to comply with Safety Principles (EN60950).

Wenn mit dem falschen Typ ausgetauscht, besteht Explosionsgefahr.
Gebrauchte Batterien gemäß der Anleitung beseitigen.

1.2.6 Product Specifications

1.2.6.1 Main Body Specifications

imageCLASS MF9170c / imageCLASS MF9150c

Copyboard	Fixed copyboard
Body	Desktop
Light source type	Cold-cathode tube
Lens type	Fixed focal length lens
Photosensitive medium	OPC drum (24 mm dia)
Image reading method	CCD
Exposure method	2-polygon 4-laser (2-beam/laser)
Charging method	Roller charging
Development method	Contact development
Attraction method	Roller attraction
Transfer method	Direct transfer (ETB: Electrostatic Transportation Belt)
Separation method	Curvature separation
Cassette pickup method	Duplo (Center line)
Multifeeder pickup method	Duplo (Center line)
Drum cleaning method	Cleaning blade
Transfer cleaning method	Electrostatic cleaning
Fixing method	On-demand fixing
Delivery method	Face down
Toner level detection function	Provided
Toner type	Nonmagnetic 1-component toner
Toner supply type	All-in-one cartridge
Toner save mode	Provided
Original type	Sheet, book, 3-D object (Up to 2kg)
Maximum original size	A4/ LTR/ LGL
Original size detection function	Not provided
Reproduction ratio	50% to 200% (incremented by 1%), 50%, 70%, 81%, 86%, 100%, 115%, 122%, 141%, 200%
Warm-up time	Less than approx. 60 sec (Temperature: 20 degC, Humidity: 65%, from when the machine is turned on to when the standby screen is displayed)
Print area	At printing Paper other than envelope: Inside of the circumference of 5 mm Envelope: Inside of the circumference of 10 mm At copying Inside of the lead edge of 5 mm, both sides of 3 mm, and trailing edge of 5 mm At the time of printing a received message Inside of the lead edge of 5 mm, both sides of 3 mm, and trailing edge of 6 mm
Maximum non-image width (main scanning direction)	Less than +/- 0.5% (At stream reading: Not specified)
Maximum non-image width (sub scanning direction)	Less than +/- 0.5% (At stream reading: Less than +/- 1.0%)
Image margin (leading edge)	0 +/- 1.5 mm
Image margin (left/right)	Left edge: 0 +/- 1.5 mm (The right side is not detected.)
Non-image width (leading edge)	Less than 5.0 +/- 2.0 mm (When ADF is used (incl. stream reading): Less than 5.0 +/- 2.0 mm)
Non-image width (left/right)	Left edge: Less than 3.0 +/- 2.0 mm (When ADF is used (incl. stream reading): Less than 3.0 +/- 2.0 mm)
Gradation	256 gradation
Reading resolution	600 x 600 dpi
Reading speed	Fixed reading: Not specified Stream reading: Single-sided: 20.8ipm/LTR (600dpi), 19.7ipm/A4 (600dpi) Double-sided: Approx. 7ipm
Copying resolution	600 x 600dpi (ADF, copyboard)
Printing resolution	600 x 600 dpi
First copy time	(See "Print Speed") Fixed reading: Less than 12.5 sec (A4/LTR) Stream reading: Less than 18.5 sec (A4/LTR)
First print time	Less than 12.5 sec
Print speed	(See "Print Speed")
Print speed (A4)	21 ppm

Print speed(LTR)	22 ppm
Paper type	(See "Paper Type")
Cassette paper size	LTR, LGL, EXEC, FLSC, OFI, B-OFI, M-OFI, A4, A5, B5
Multifeeder paper size	LTR, LGL, STMT, EXEC, FLSC, OFI, B-OFI, M-OFI, G-LTR, G-LGL, A4, A5, B5, Custom Size, COM10, Monarch, DL, ISO-C5, ISO-B5
Cassette paper type	Plain, Recycled Paper, Color, Bond, Heavy, Rough
Multifeeder tray paper type	Plain, Recycled Paper, Color, Bond, Heavy, Rough, Transparencies, Labels
Cassette capacity	Paper cassette: 250 sheets Cassette Feeding Unit-AB1/ AC1 (optional): 500 sheets (80g/m2)
Multifeeder tray capacity	100 sheets
Auto 2-sided printing	Provided
Duplex method	Automatic double-sided printing
Delivery tray stack	250 sheets (64 to 80g/m2)
Continuous reproduction	1 to 99 sheets
Memory	Main Unit RAM - 384 MB: MF9150c - 512 MB: for all excluding MF9150c
Hard disk	No (without options)
Sleep mode	Provided
Operating environment (temperature range)	10 to 30 degC
Operating environment (humidity range)	Humidity equivalent to 10 to 80%
Noise	At standby: - Less than 43dB (Sound power level) At copying: - B&W: 66.35dB - Color: 67.3dB
Power supply rating	Rated input voltage: 100 to 127V (100V model)/220 to 240V (200V model) Rated input frequency: 50/60Hz
Power consumption (maximum)	Less than 929W (Main unit only) Less than 949W (When Cassette Unit AB1/AC1 (optional) is installed)
Power consumption	At standby: Less than 28W At sleep mode: Less than 1W (100V model), Less than 1.2W (200V model)
Ozone	At initial use: Less than 0.01ppm, After service life: Less than 0.035ppm B&W: 1.5mg/hr Color: 3.0mg/hr
Dimensions	Dimension: 546 mm x 527 mm x 627 mm (Main unit only) 546 mm x 527 mm x 930 mm (When Cassette Feeding Unit-AB1/ AC1 (optional) is installed) Installation space (Jam removal cover and ADF opened, Cassette pulled out): 546 mm x 1140 mm x 792 mm 546 mm x 1140 mm x 1095 mm (When Cassette Feeding Unit-AB1/ AC1 (optional) is installed)
Weight	Approx. 44kg (incl. toner cartridge)
Option	See "System Configuration".

1.2.6.3 ADF Specifications

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Paper size	AB type: A4R, B5R, A5R, A5, B6 (B6: Horizontal feeding only) Inch type: LGL, LTRR, STMTR, STMT (Length: 128 mm to 355.6 mm, Width: 139.7 mm to 215.9 mm)
Duplex paper size	A4R/B5R/A5R/A5/B6/LTRR/LGL/STMTR (B6: Horizontal feeding only)
Original type	Sheet document
Original orientation	Face-up
Original position	Center line
Original processing mode	Single-sided/Double-sided
Original reading	Stream reading
Stack	[J/J] A4/LTR: 50 sheets, LGL: 30 sheets [LL/HH] A4/LTR: 30 sheets, LGL: 15 sheets
Mixed original sizes	Enabled
Original AE detection	Provided

1.2.6.4 FAX Specifications

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Applicable lines	Public Switched Telephone Network (PSTN) * PSTN currently supports the modem speed of up to 28.8Kbps. It, however, differs depending on the telephone line condition. Number of lines connected: 1
Transmission method	G3
Modulation method	Image modulation: V.34/V.17/V.29/V.27ter Transmission procedure: V.21
Transmission speed	Transmission speed: Approx. 3 sec per page ECM-JBIG, Transmitted from memory at 33.6Kbps * Based on the JBIG standard mode with ITU-T standard chart No. 1 Modem speed: 33,600bps, Automatic fallback
Coding	Compression method: JBIG, MMR, MR, MH
Error correction	ECM
Scanning line density	Reading: 8x 3.85/7.7/15.4 16x15.4 Recording: 600 x 600dpi
Scanning density adjustment	9 levels, manual adjustment
Half tone	256 gradation
Printing resolution	Resolution conversion: Provided <200 x 100dpi>: 8 pixels/mm x 3.85 lines/mm <200 x 200dpi>: 8 pixels/mm x 7.7 lines/mm <200 x 400dpi>: 8 pixels/mm x 15.4 lines/mm <400 x 400dpi>: 16 pixels/mm x 15.4 lines/mm
Reduction for reception	Automatic reduction of an image received: 75 to 100% (incremented by 1%)
FAX/TEL switching	Provided
Remote reception	Provided
Memory reception	Send/Receive memory: More than 1000 pages (Total number of sent/received pages) *Based on the JBIG standard mode with ITU-T standard chart No. 1 Memory reception: Provided
Redial	Automatic redialing: Provided
Memory backup	Number of memories which can be accumulated: 1236 sheets Memory backup time: 1 hour
Time	Within 60 sec per month (Zone A) Within 90 sec per month (Zone B)
Others	Dialing method - Address book (300 destinations) Group dialing (299 destinations) (incl. One-touch button (200 destinations)) - Regular dialing (by numeric keys) - Automatic redialing, manual redialing (specified from the calling record) - Broadcast transmission (301 destinations) Output of reports - Communication management report (Automatically printed for every 40 calls) - Transmission result report / Reception result report Reception method - Automatic reception - Remote reception by a telephone set (Initial setting ID: 25)

1.2.7 Function List

1.2.7.1 Print Speed

imageCLASS MF9170c / imageCLASS MF9150c

First copy time

The following standard is defined with "35 seconds" after printing 90 sheets of A4-size plain paper in the mode of "1 vs. multiple copies" *1 at copyboard reading.
(Unit: second)

T-1-37

Size		Mode/Pickup position		
		Single-sided printing		
		Cassette/Optional cassette		Manual feed tray
Plain paper	A4R	12.5		12.5
	LGL	16.3		16.3
	LTRR	12.5		12.5
Thick paper	A4R	-		15.7
	LGL	-		-
	LTRR	-		15.7

Print speed

(Unit: ppm)

T-1-38

Size		Mode/Pickup position							
		1 vs. multiple copies *1 (Fixed reading)				1 vs. 1 copy *1 (Stream reading)			
		Single-sided		Double-sided		Single-sided		Double-sided	
Plain paper	Cassette/ Optional cassette	Manual feed tray	Cassette/ Optional cassette	Manual feed tray	Cassette/ Optional cassette	Manual feed tray	Cassette/ Optional cassette	Manual feed tray	Cassette/ Optional cassette
	A4R	21.0	21.0	10	10	19.7	19.7	7	7
	LGL	17.9	17.9	5	5	17.9	17.9	5	5
Thick paper	LTRR	22.0	22.0	11	11	20.8	20.8	7	7
	A4R	17	17	8.4	8.4	16.8	16.8	7	7
	LGL	14.3	14.3	4	4	14.3	14.3	4	4
	LTRR	17	17	8.8	8.8	17.6	17.6	7	7
	Transparency *2	-	3.6 to 1.8	-	-	-	3.6 to 1.8	-	-
	Postcard *2	-	10.1 to 2.5	-	-	-	10.1 to 2.5	-	-
Envelopes		-	3.2	-	-	-	3.2	-	-

*1: 1 vs. multiple copies:
For example, make 10 copies of one sheet of document.
1 vs. 1 copy:
For example, make one copy of one sheet of document.

*2: At the continuous print, printing speed may decelerate depending on the conditions.

1.2.7.2 Print Speed

imageCLASS MF8450c

First copy time

The following standard is defined with "25 seconds" after printing 75 sheets of A4-size plain paper in the mode of "1 vs. multiple copies" *1 at copyboard reading.
(Unit: second)

T-1-39

Size		Mode/Pickup position	
		Single-sided printing	
		Cassette/Optional cassette	Manual feed tray
Plain paper	A4R	15.7	15.7
	LGL	20.3	20.3
	LTRR	15.7	15.7
Thick paper	A4R	-	15.7
	LGL	-	-
	LTRR	-	15.7

Print speed

(Unit: ppm)

T-1-40

Size		Mode/Pickup position							
		1 vs. multiple copies *1 (Fixed reading)				1 vs. 1 copy *1 (Stream reading)			
		Single-sided		Double-sided		Single-sided		Double-sided	
		Cassette/ Optional cassette	Manual feed tray	Cassette/ Optional cassette	Manual feed tray	Cassette/ Optional cassette	Manual feed tray	Cassette/ Optional cassette	Manual feed tray

Envelopes		-	3.2	-	-	-	3.2	-	-

*1: 1 vs. multiple copies:
1 vs. 1 copy:

For example, make 10 copies of one sheet of document.
For example, make one copy of one sheet of document.

*2: At the continuous print, printing speed may decelerate depending on the conditions.

1.2.7.3 Paper Type

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Paper Type

Supported paper types are shown below:

A: available

-: not available

T-1-41

Type	Weight	Cassette/ Optional cassette	Manual feed tray
Plain	From 19 to 24 lb (70 to 90 g/m ²)	A	A
Plain H	From 20 to 28 lb (75 to 105 g/m ²)	A	A
Color	From 19 to 24 lb (70 to 90 g/m ²)	A	A
Recycled	From 19 to 24 lb (70 to 90 g/m ²)	A	A
Heavy 1	From 28 to 32 lb (106 to 120 g/m ²)	A	A
Heavy 2	From 32 to 47 lb (121 to 176 g/m ²)	-	A
Bond	20 lb (75 g/m ²)	A	A
Transparency *	-	-	A
Labels	-	-	A
Envelopes	-	-	A
Rough	-	A	A

*: Use only LTR transparencies made especially for this machine.

Paper Size

Supported paper sizes are shown below.

T-1-42

	Cassette/Optional cassette	Manual feed tray
Size (W x L)	Legal, Letter, Officio, M-Officio, B-Officio, Executive, Foolscap, A4, B5, A5	3" x 5" to Legal (8 1/2" x 14") (76.2 x 127 to 215.9 mm x 355.6 mm) (Always set vertically.)

MEMO:

The default paper size is LTR. If you use a different paper size, you must change the paper size settings.

*2 For outside Japan (PCB19: 120 V, PCB21: 230 V)

2.2 Basic Sequence

2.2.1 Basic Sequence of Operation

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The operational sequence of a printer is controlled by the microcomputer (CPU) on the DC controller.

The purposes of each period, from power-ON until the inverter motor stops after the completion of printing, are listed below.

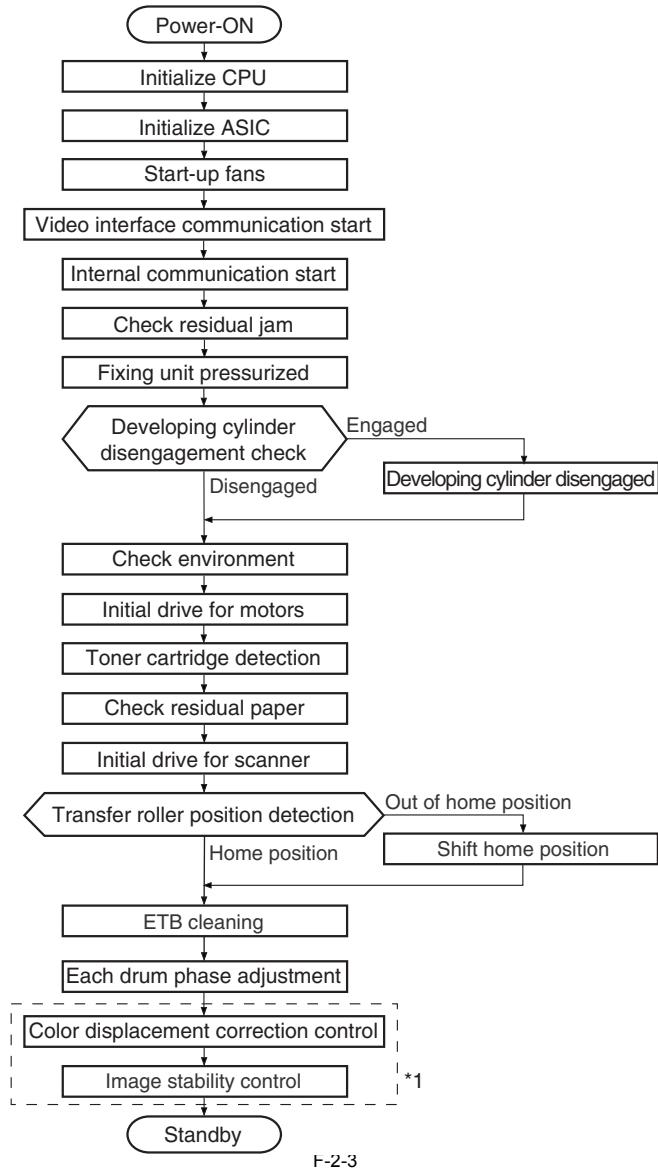

T-2-1

Operation	Interval	Description	Remarks
WAIT (Wait)	From either power switch is turned ON or front cover is closed until each drum phase adjustment is completed.	To clear drum surface potential, to adjust each drum phase, and to clean the ETB.	The machine detects the toner level, cartridge presence, new cartridge, and environmental status during the period. It also executes the calibration (color displacement correction and image stability control) as required.
STBY (Stand-by)	From end of WAIT or LSTR period until either the print command is input from the main controller or power switch is turned OFF.	To keep the machine ready to print.	The machine goes into sleep mode when a sleep command is sent from the main controller. It executes the color displacement correction and the image stability control when each command is sent.
INTR (Initial rotation)	From the print command is input by the main controller until paper is picked up.	To stabilize the photosensitive drum sensitivity in preparation for printing.	
PRINT (Print)	From /TOP signal is sent to the main controller after INTR period until the fixing delivery sensor detects trailing edge of paper.	To form image on the photosensitive drum based on the video signals sent from the main controller and to transfer the toner image onto paper.	The printer executes the image stabilization control in every specified number of prints or specified time elapsed after the power is turned ON.
LSTR (Last rotation)	From the end of PRINT period until the inverter motor stops.	To deliver the last paper out of the machine.	The machine returns to the INTR period as soon as another print command is sent from the main controller.

2.2.2 Power-On Sequence

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Power-on sequence is to reset the machine's status and to check that there is no JAM or failure.
The sequences from power-ON until the stand-by status are as below.

F-2-3

*1 Items surrounding with dotted line are functioning only when needed.

3.1 Overview/Configuration

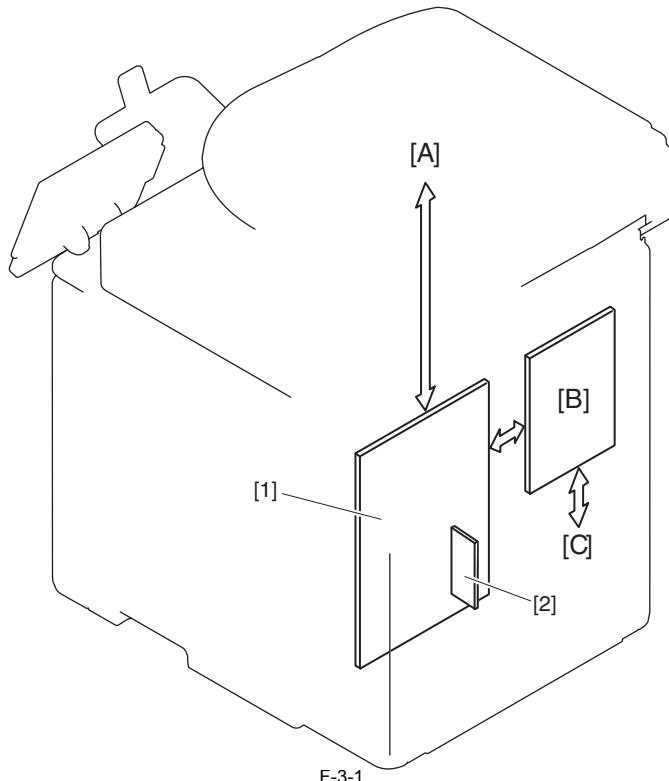

3.1.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine's main controller mainly consists of the following parts.

T-3-1

No.	PCB Name	Function
[1]	Main controller PCB	System control, memory control, image processing control, interface control
[2]	Extended RAM DIMM	Memory for image storage Memory for work (image processing and data analysis, etc.)

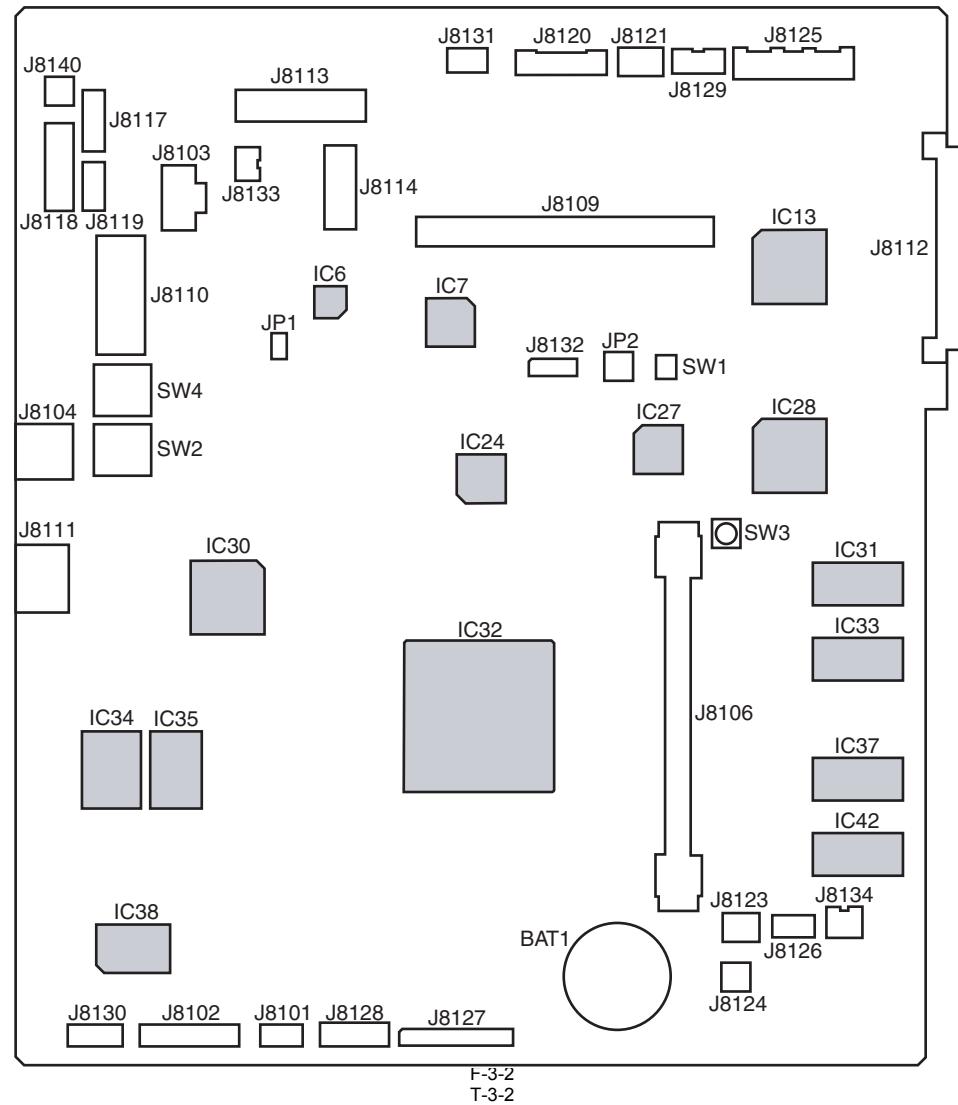

F-3-1

- [A] Reader unit
- [B] DC controller PCB
- [C] Printer unit

3.1.2 Configurations/functions

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

IC	Function
IC6	Control panel screen transfer
IC7, IC27	Read image process
IC13, IC28	Record image process
IC24	Universal port
IC30	Ethernet controller
IC31, IC33, IC37, IC42	DDR SDRAM (main memory)
IC32	Main CPU, main image process
IC34	BOOT ROM
IC35	Main program ROM
IC38	FAX modem

T-3-3

Jack No.	Function	Connect to
J8101	Serial interface for debug	-
J8102	Not implemented	-
J8103	USB on a control panel, Connect to a media card reader	Control panel relay PCB
J8104	USB device connector	USB device
J8106	RAM DIMM connector	RAM DIMM for expansion
J8109	SRAM connector for debug	-
J8110	On-board SD card interface	SD card
J8111	LAN connector	LAN
J8112	Video signal, engine command	DC controller PCB
J8113	CCD read image signal, lamp power/control signal	CCD relay PCB
J8114	Control panel screen image signal, key signal	Control panel relay PCB
J8117	CCVI interface	CC-VI
J8118	Serial interface	Coin vendor (100V, 230V) Serial I/F PCB (120V)
J8119	Card reader interface	Card reader-E1
J8120	Motor for ADF, solenoid, sensor signal	ADF relay PCB
J8121	Reader motor control signal	Reader motor (M12)
J8123	Not implemented	-
J8124	Secondary battery for memory backup	Secondary battery
J8125	Power source	Low-voltage power PCB
J8126	Pseudo CI signal	Pseudo CI PCB
J8127	NCU control signal (digital)	NCU PCB
J8128	NCU control signal (analog)	NCU PCB
J8129	Power control signal	Low-voltage power PCB
J8130	Not implemented	-
J8131	CCD unit HP signal	Reader HP sensor (SR717)
J8132	For debug	-
J8133	Front cover open/close detection signal	Front cover sensor (SR720)
J8134	Power for pseudo CI	Pseudo CI PCB/off hook PCB
J8140	Power for serial I/F	Serial I/F PCB

3.2 Set-Up Sequence

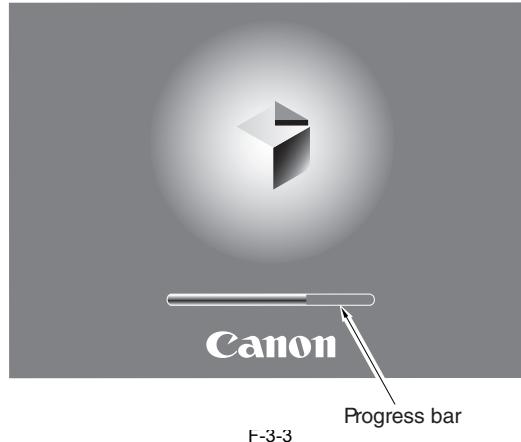

3.2.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The system software controlling the machine is stored in the main program ROM in the main controller PCB.

At the time of startup, the CPU reads the system software from the main program ROM into the main memory (DDR-SDRAM) according to the boot program in the BOOT ROM.

While the CPU is reading the system software and initializing memory, etc., the following screen is displayed in the control panel, where the progress status is displayed in the progress bar.

F-3-3

3.2.2 Startup Sequence

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

1. Boot Program

Executed by the CPU in the main controller PCB when the main power switch is turned on.

Check the status of the image memory (DDR-SDRAM).

Load the control program from the main program ROM to the memory if the status is normal.

Display an error code when a fault is detected.

2. Control Program 1

1) Perform checking and initialization of each device (each hardware device in the main controller PCB).

2) Perform recovery of the system file as necessary when the previous shutdown was not executed normally.

In this case, it takes longer time than a normal case to start up the program.

3) Initialize each program module.

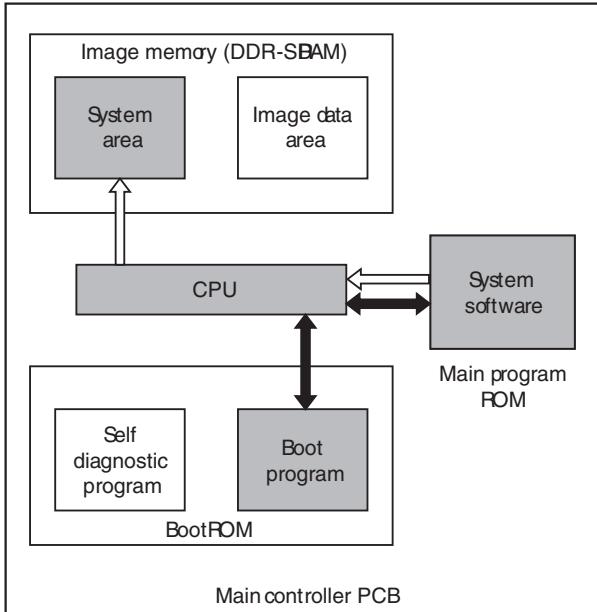

3. Control Program 2

1) Perform initialization of each software module and communication with a printer.

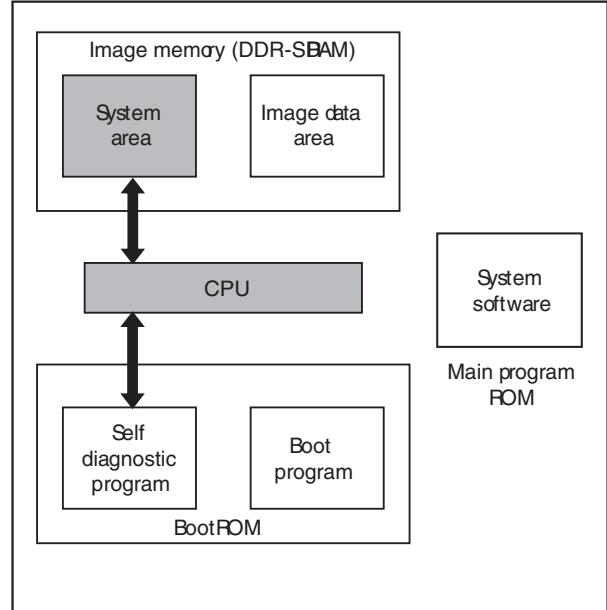

2) When the printer is detected normally, the startup sequence is completed.

If it is not detected normally, an error code "E197" is displayed after a connection timeout occurs.

- When Executing the Boot Program

- When Executing the Control Program

↔ : access to the program at time of execution.

← : flow of system program operations.

↔ : access to the program at time of execution.

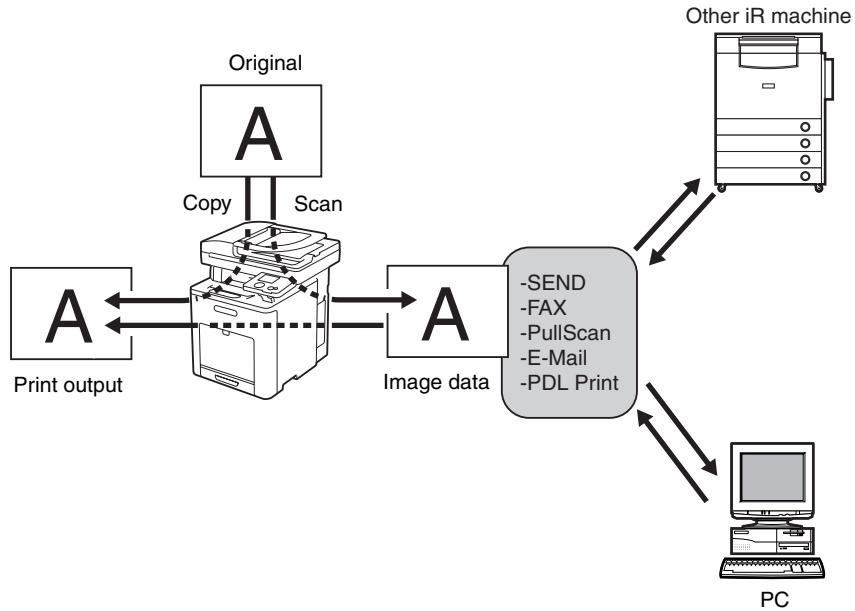

F-3-4

When the startup sequence is completed, it becomes possible to receive a job. (The operation screen is displayed in the control panel, and the color of the LED of the start key is changed from red to green.)

3.3 Image Processing

3.3.1 Overview of the Image Flow

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

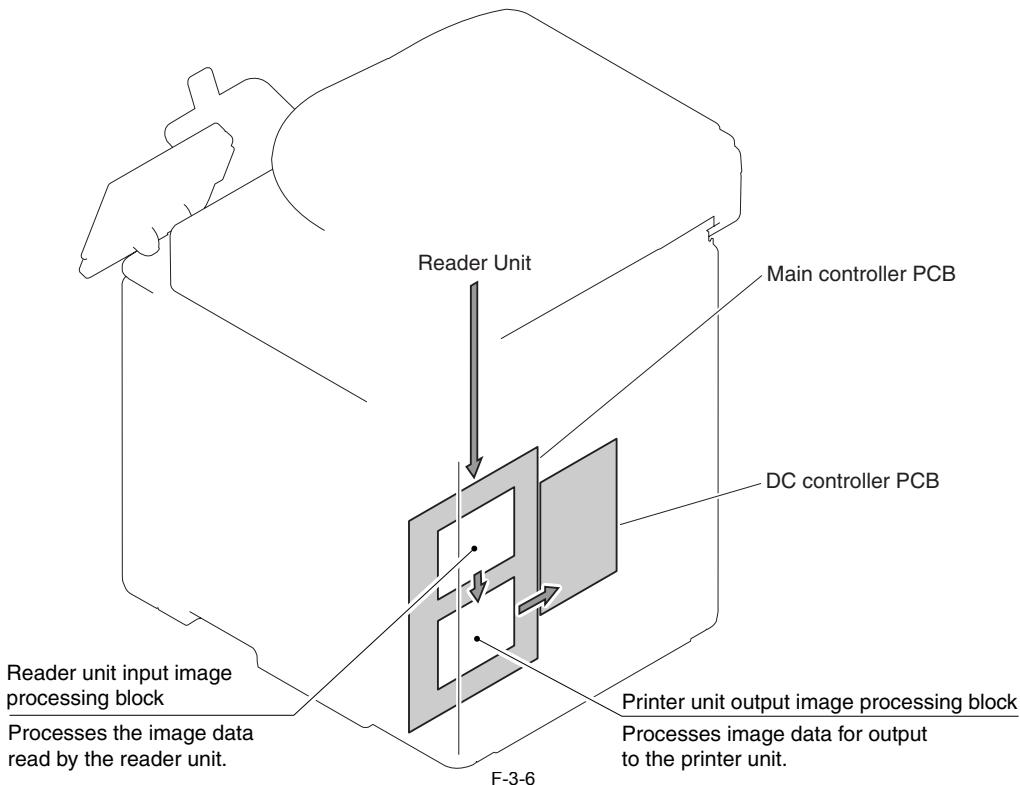

F-3-5

3.3.2 Construction of the Image Processing Module

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Image processing is mainly executed by the main controller PCB.
The configuration of related modules is shown below.

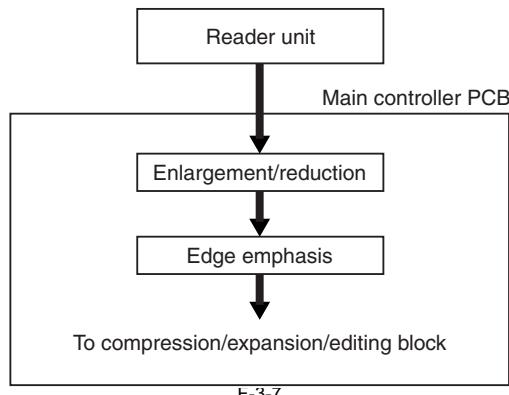

F-3-6

3.3.3 Reader Unit Input Image Processing

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The main controller PCB performs image processing to the image data read by the CCD.

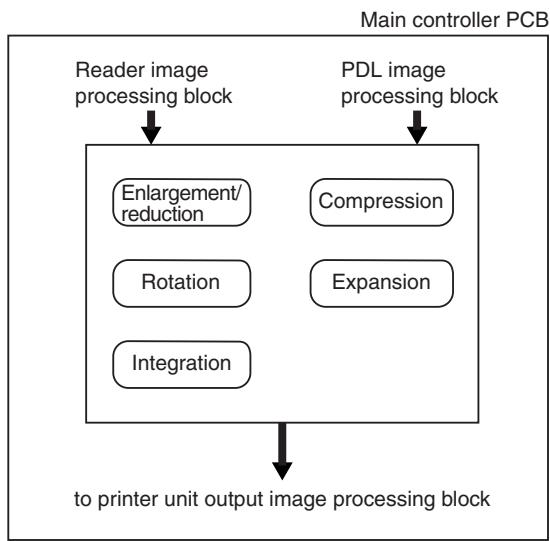

F-3-7

3.3.4 Compression/ Extension/ Editing Block

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In this processing, compression/extension/editing are performed.

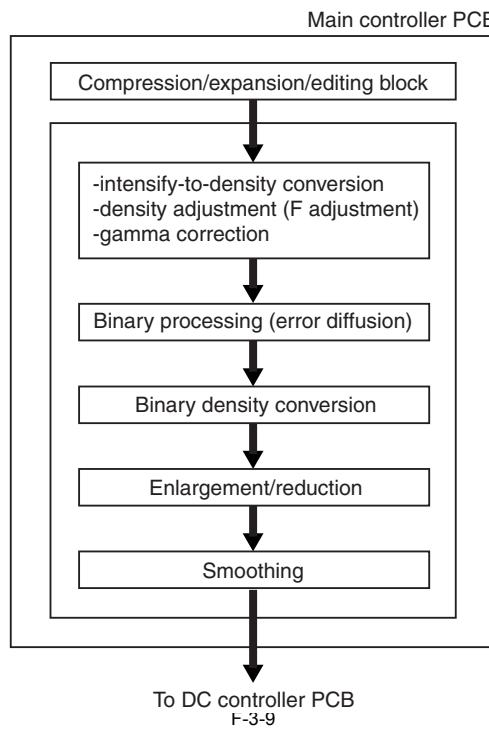

F-3-8

3.3.5 Printer unit Output Image Processing

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

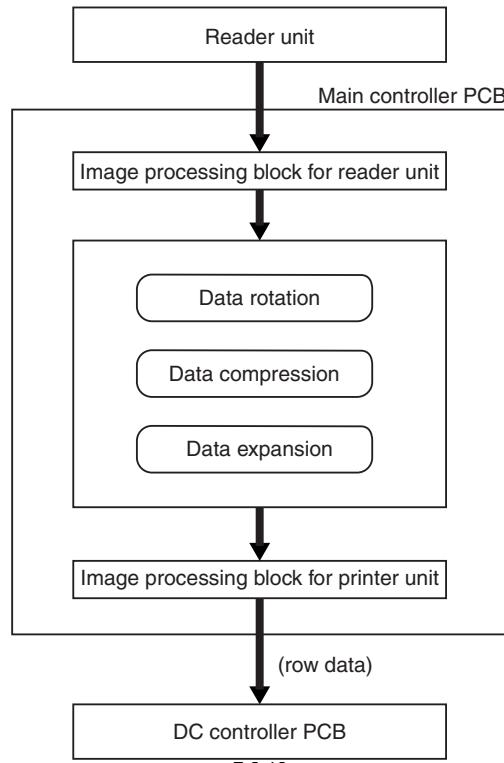

The main controller PCB performs image processing to perform printing to the image data received from the reader unit.

3.4 Image Data Flow

3.4.1 Flow of Image Data According to Copy Functions

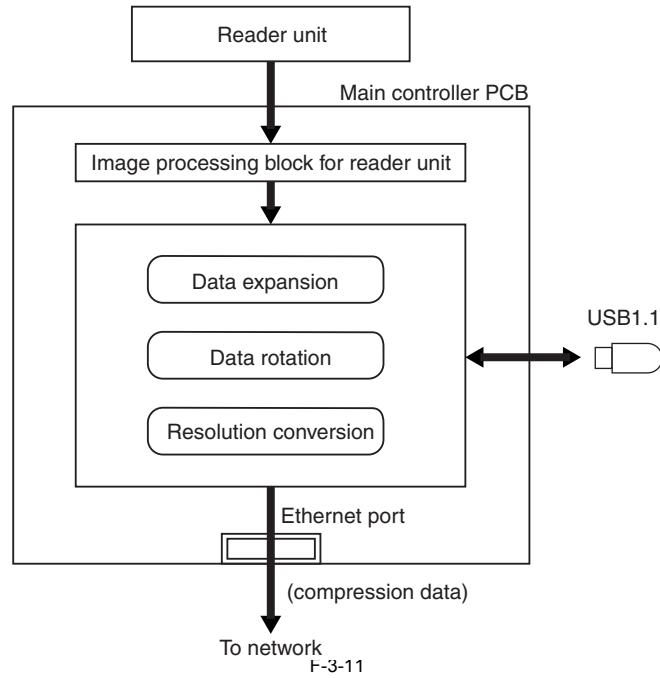

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

F-3-10

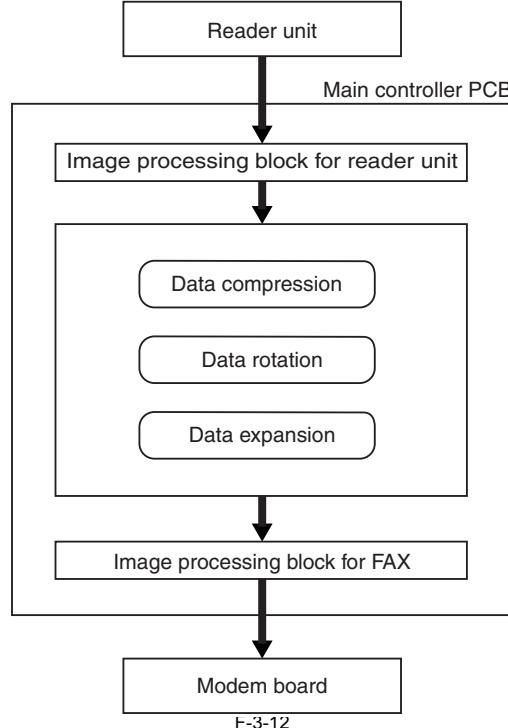

3.4.2 Flow of Image Data for the SEND Function

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

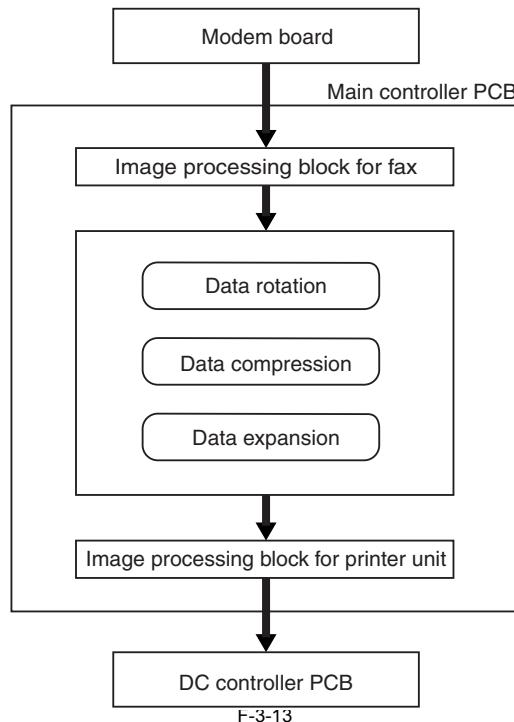

3.4.3 Flow of Image Data for the Fax Transmission

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

3.4.4 Flow of Image Data for the Fax Reception Function

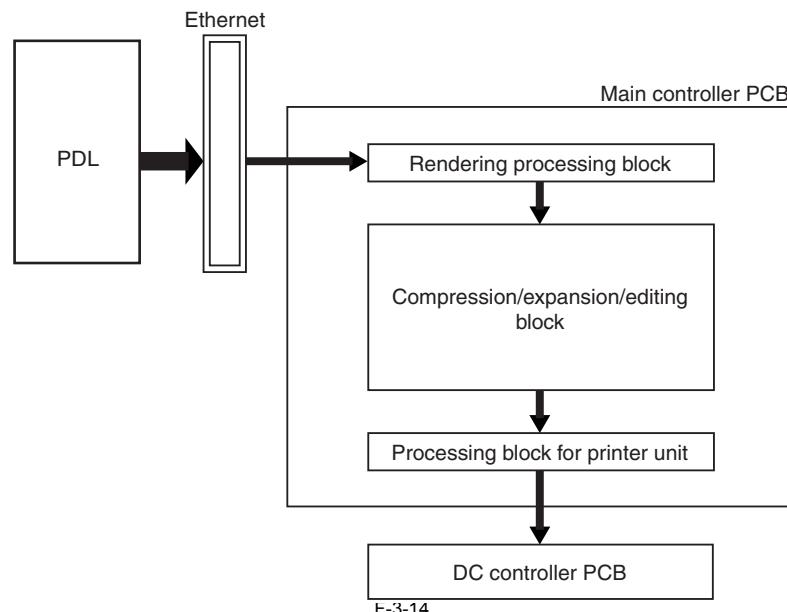

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

F-3-13

3.4.5 Flow of Image Data for the PDL Function

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

F-3-14

3.5 Parts Replacement Procedure

3.5.1 Main Controller PCB

3.5.1.1 Before Removing the Main Controller PCB

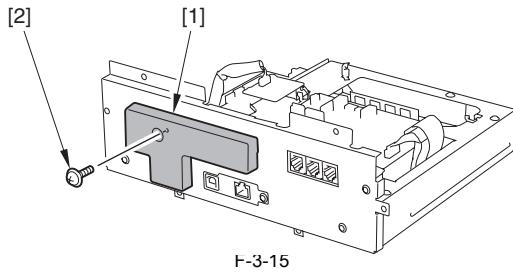

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 4) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]
- 5) Remove the Electrical Components Cover.[\(page 10-15\)](#)Reference [Removing the Electrical Components Cover]
- 6) Remove the Controller Box.[\(page 10-15\)](#)Reference [Removing the Controller Box]

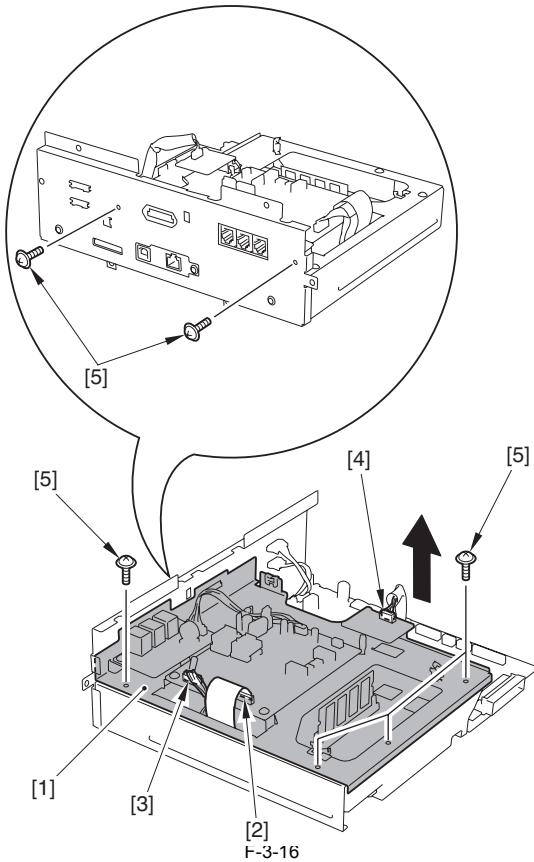

3.5.1.2 Removing the Main Controller PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the face cover [1].
- 1 screw [2]

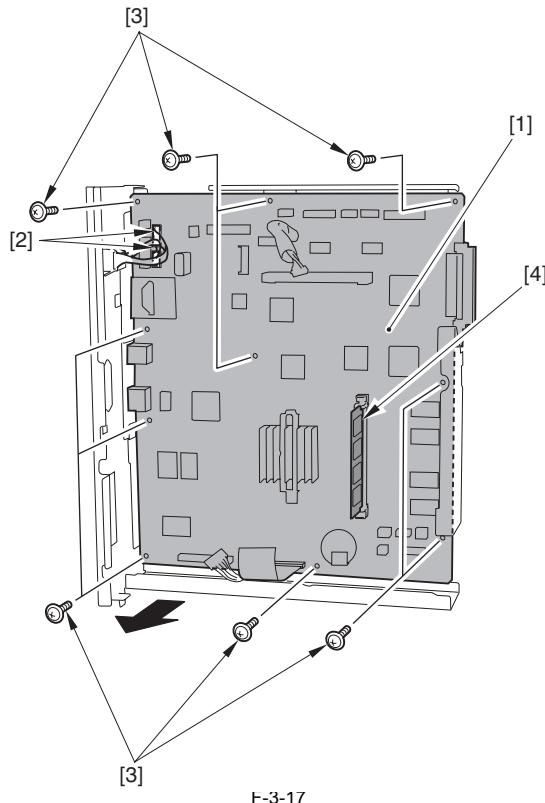

- 2) Remove the NCU frame [1].
- 1 flat cable [2] (only of the machine with FAX)
- 1 connectors [3] (only of the machine with FAX)
- 1 connectors [4]
- 6 screws [5]

- 3) Remove the Main controller PCB [1].

- 2 connectors [2]
- 10 screws [3]

F-3-17
T-3-4

⚠ Points to Note When Replacing the Main Controller

- If the RAM [4] is installed in the main controller PCB, remove it.
- If a RAM is not installed in the new main controller, install the removed RAM [4].

3.5.1.3 Procedure after Replacing the Main Controller PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the main controller PCB with new one, perform the following procedure.

1. Backup the user data

Import the user data using the remote UI.

The machine does not support "Import/export via USB" (provided in the following service SW) because it supports network as standard function.
COPIER->FUNCTION->PARAM->SYS-SW->Bit Switch->SW 02 Bit6

2. Enter the flicker adjustment value of the control panel

- 1) Using the service mode, check the flicker value of the control panel.
TESTMODE> PANEL> FLICKER CHECK START> FLICKER ADJUST

MEMO:

The flicker adjustment value can be also checked in the spec list (FLICKER ADJ PRM).
How to output the spec list: COPIER> FUNCTION> MISC-P> OUTPUT> SPEC

- 2) Replace the main controller PCB.

- 3) Using the service mode, enter the adjustment value checked in Step 1).
TESTMODE> PANEL> FLICKER CHECK START> FLICKER ADJUST

- 4) Using the user mode, execute automatic gradation correction (full correction).

Initial Setting/Registration> Adjustment/Cleaning> Automatic Gradation Correction> Full Correction

4.1 Basic Construction

4.1.1 Overview

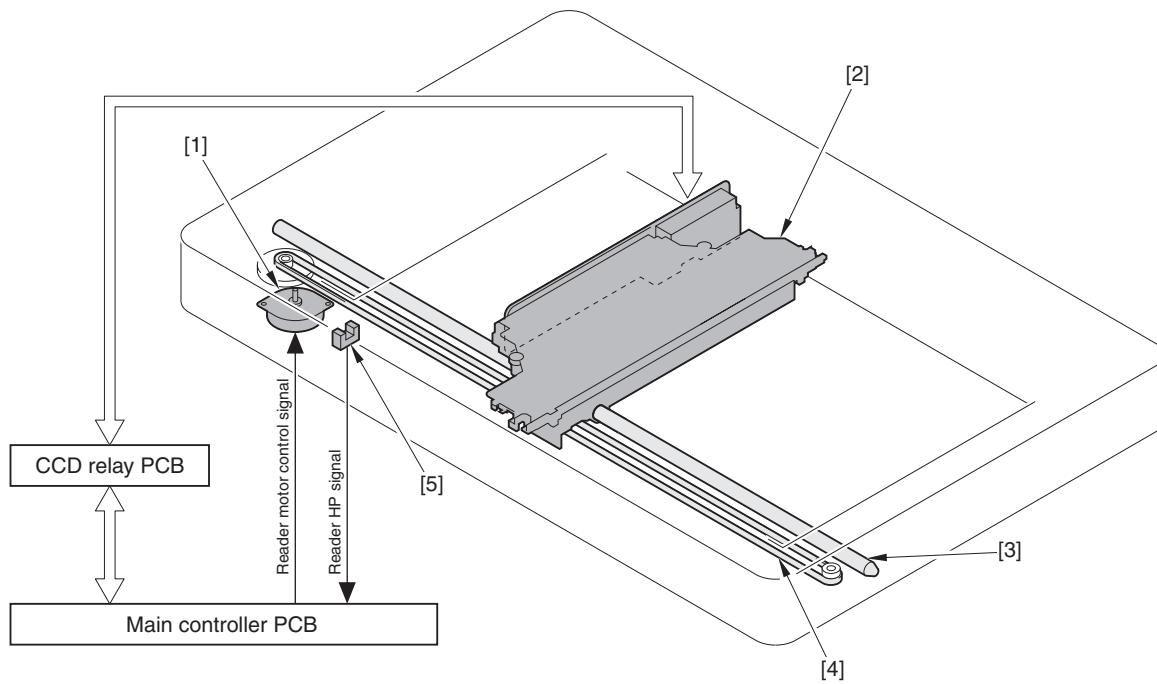

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-4-1

Item	Function/Method
Lamp	Cold-cathode tube
Document scan	Book mode: Scanning by movement of the CCD unit ADF: Scanning in stream reading mode with CCD unit fixed
Reading resolution	600 dpi x 600 dpi
Gradation	256 gradation
Productivity (ADF)	Single-sided: 20.8 ipm (LTR), 19.7 ipm (A4) Double-sided: Approx. 7 ipm (A4/LTR)
Detection of the carriage position	Reader HP sensor (SR717)
Magnification change (Zoom)	50 to 200 % (Sub scanning direction only. Image processing by the main controller PCB)
Lens	Fixed focus lens
CCD	Number of lines: 1 line each for RGB Pixels: 5400 pixels/color Maximum document reading width: Equivalent to LTR
CCD unit drive control	Drive control by the reader motor (M12)
Document lamp	Lighting control by the inverter circuit
Document size detection	Not provided

4.1.2 Major Components

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

F-4-1

- | | | | |
|-----|--------------------------|-----|---------------|
| [1] | Reader motor (M12) | [2] | CCD unit |
| [3] | Guide shaft | [4] | Carriage belt |
| [5] | Reader HP sensor (SR717) | | |

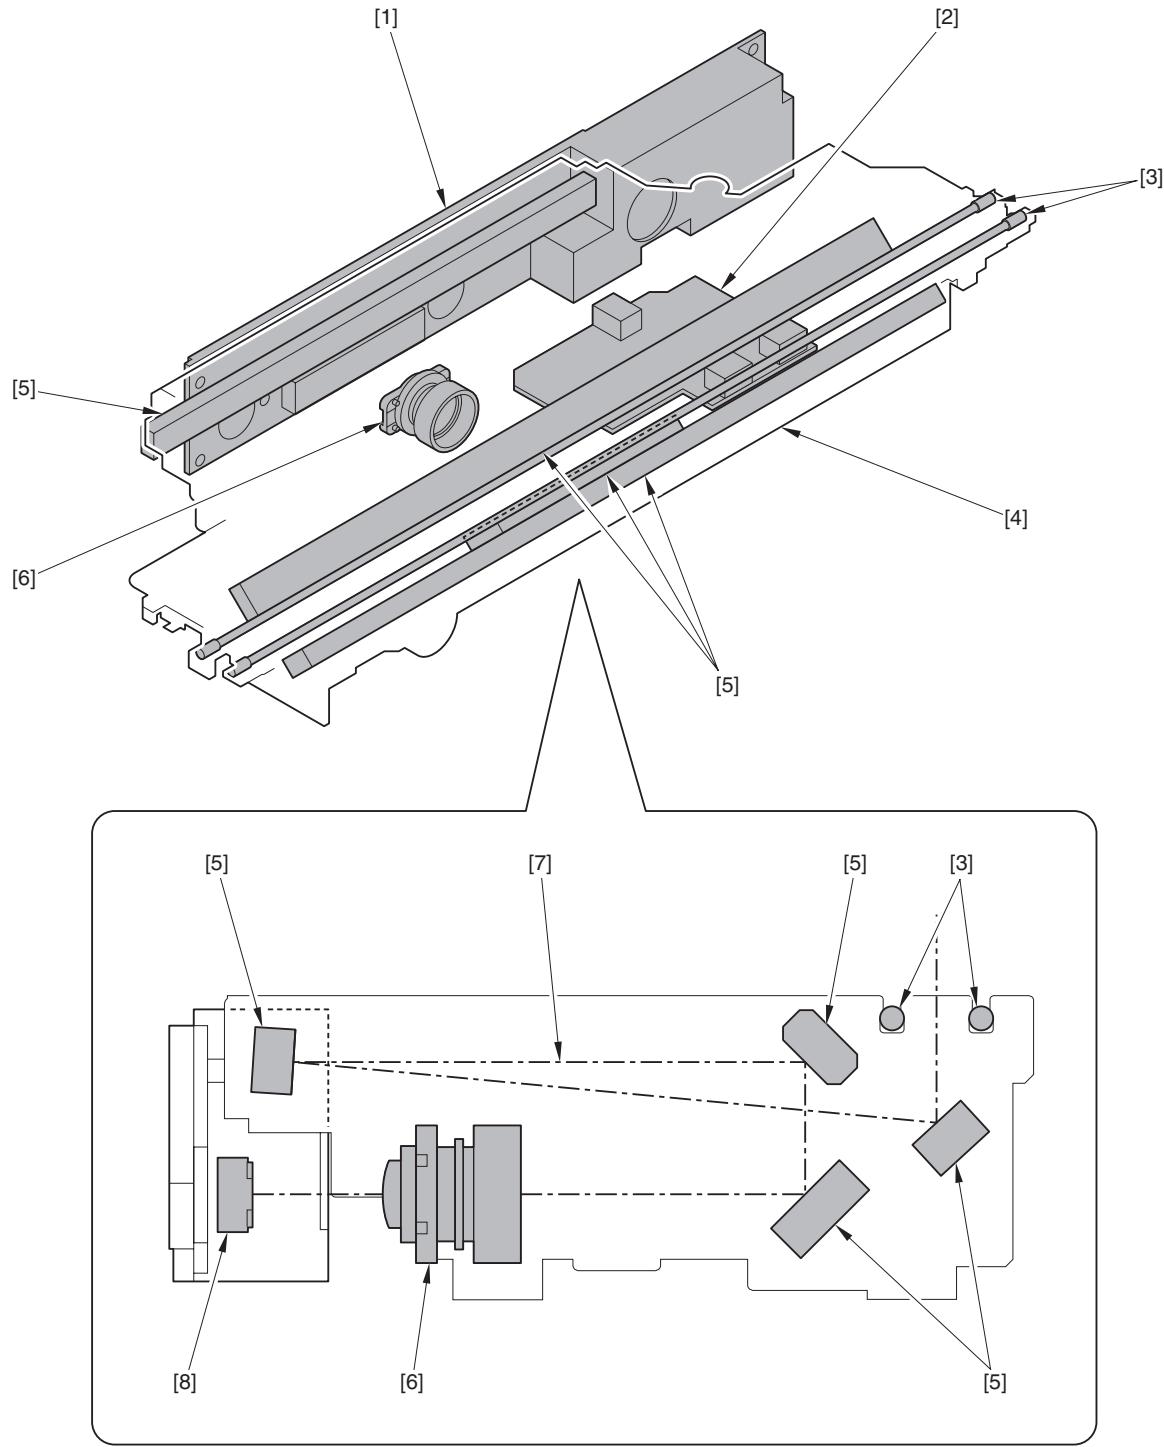

Reading on the copyboard

The document loaded on the copyboard is read by the CCD unit, which moves in the horizontal direction.
The CCD unit is driven by the reader motor (M12).

The CCD unit home position is detected by the reader HP sensor (SR717).

Constitution of the CCD unit

The light illuminated from the 2 document lamps (LAMP1, 2) is reflected to the original and reaches to the CCD via the 4 mirrors and the lenses.

4.2 Basic Sequence

4.2.1 Basic Sequence of Operation at Power-on

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

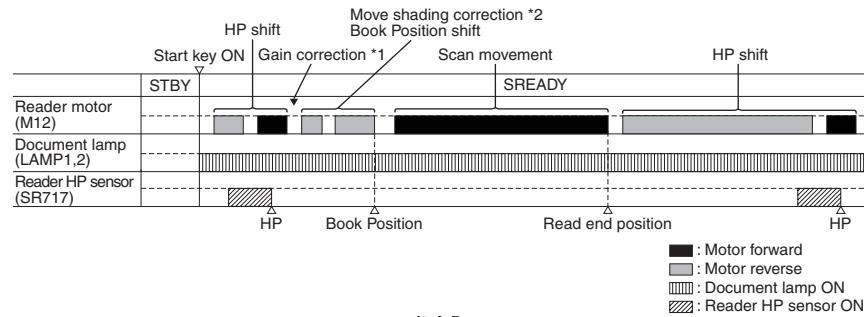

*1: Pre-scan operation: the machine drives the A4R-long scan operation (motor drive only) to smooth the drive belt and grease.

F-4-4

4.2.2 Basic Sequence of Operation in Response to a Press on the Start Key (book)

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

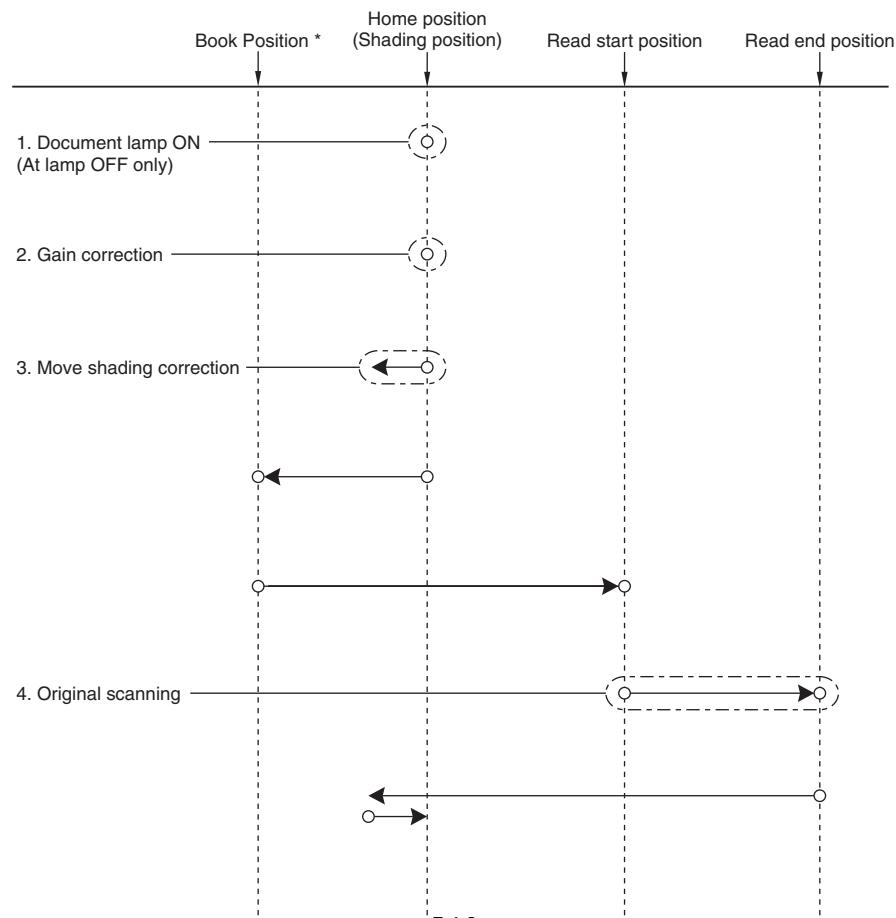

*1 Gain correction: The gain ratio of the analog video signal output from CCD is adjusted to be a fixed value.

*2 Move shading correction: Even when the document density is constant, the CCD output level does not become constant due to the following reasons.

- Variation in pixels for CCD
- Difference of the transmitted light intensity between the center and the surrounding of the lens
- Difference of the light intensity between the center and the surrounding of the document lamp
- Deterioration of the document lamp

Shading correction is performed to correct unevenness of the CCD output level.

* Book Position: the position at which the motor is accelerated to prepare for reading.

4.3 Various Control

4.3.1 Lamp Control

4.3.1.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Advance lamp activation control

It takes 9 to 25 sec (which varies depending on the surrounding temperature) from when the cold-cathode tube lamp, which is used as a document lamp, is activated to when the light intensity reaches the target intensity.

If the document lamp is deactivated immediately after the scan job is completed, it takes time until the light intensity becomes stable next time when the lamp is activated, causing productivity to decrease.

The machine deactivates the document lamp when five minutes elapse after the scan job is completed.

If the next job is started within five minutes after the scan job is completed, reading can be performed immediately because the document lamp has been activated. Even in the condition where the document lamp has been deactivated, if the next job is started within five minutes (within 10 minutes after the previous job is completed), the temperature of the document lamp tube is relatively high, and the time required until reading is enabled can be reduced.

Even after five minutes elapse, the document lamp is activated in advance when any of the following operations is performed. The machine reduces the wait time by activating the document lamp before the scan job is started.

- Pressing a button on the control panel
- Inserting a USB memory into the USB slot
- Inserting a memory card into the card slot
- Opening/closing the front cover or reverse assembly cover
- Opening/closing the cassette
- Setting paper in the empty cassette
- Setting paper in the empty manual feed tray
- Setting paper in the empty document tray

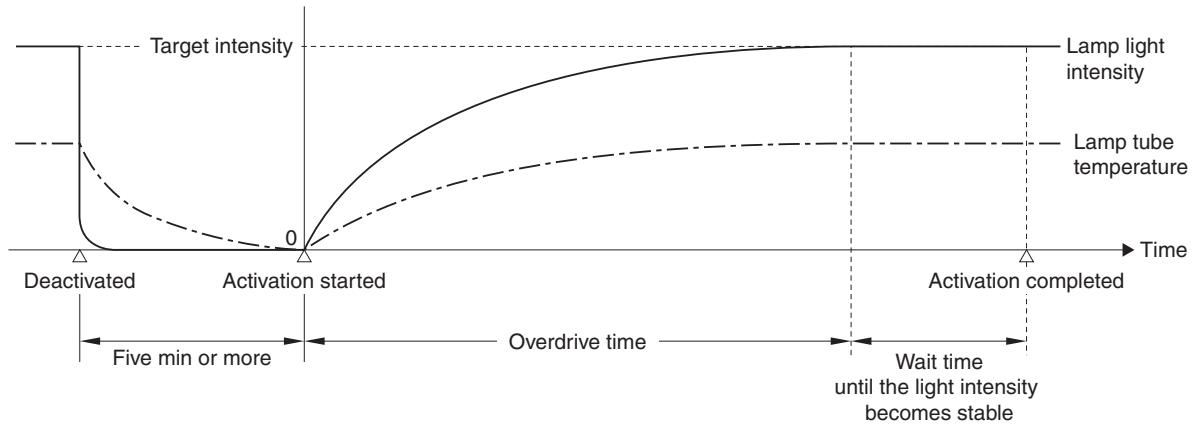

Overdrive control

When starting activation of the document lamp, the machine applies a voltage higher than the one applied at reading. The machine reduces the time required until the light intensity of the document lamp reaches the target intensity (overdrive time) as much as possible by controlling the voltage.

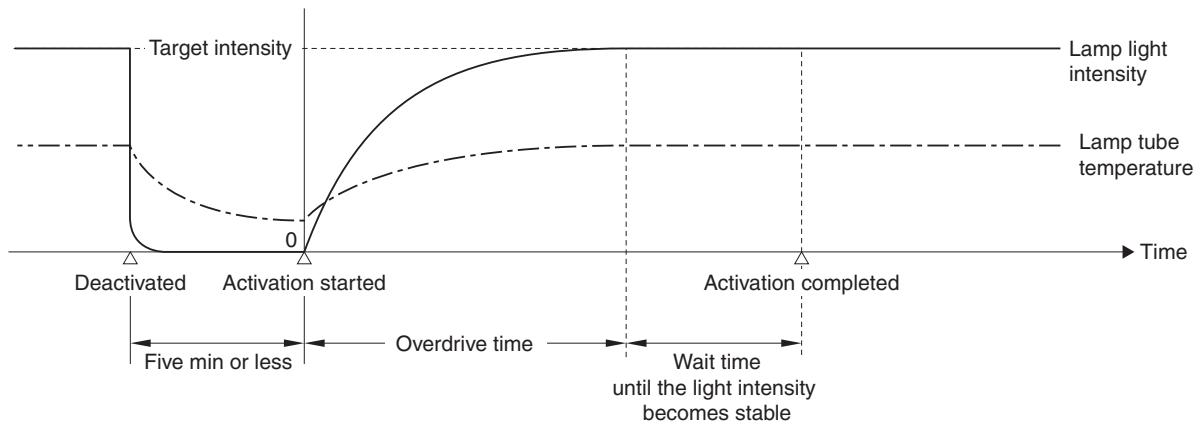

The overdrive time varies depending on the tube temperature at the time when activation of the lamp is started. The tube temperature is affected by the previous activation time, time that elapsed after deactivation, and temperature detected by the environment sensor (PCB28).

The wait time until the activation of the document lamp is completed is calculated by totaling the overdrive time and wait time until the light intensity becomes stable.

In the case that the document lamp is activated when five minutes or more elapse after being deactivated.

In the case that the document lamp is activated within five minutes after being deactivated.

4.3.2 Enlargement/Reduction

4.3.2.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine does not perform optical magnification change. It always reads a document at 100 % (original size). However, the main controller has a function to perform digital magnification change at 50 to 200 %, and the magnification can be set in increments/decrements of 1 %.

4.3.3 Detecting the Size of Originals

4.3.3.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine does not perform document size detection. (The machine is not equipped with the document size sensor.) The machine performs reading in the size specified on the control panel when reading the document.

4.3.4 Dirt Sensor Control

4.3.4.1 Overview

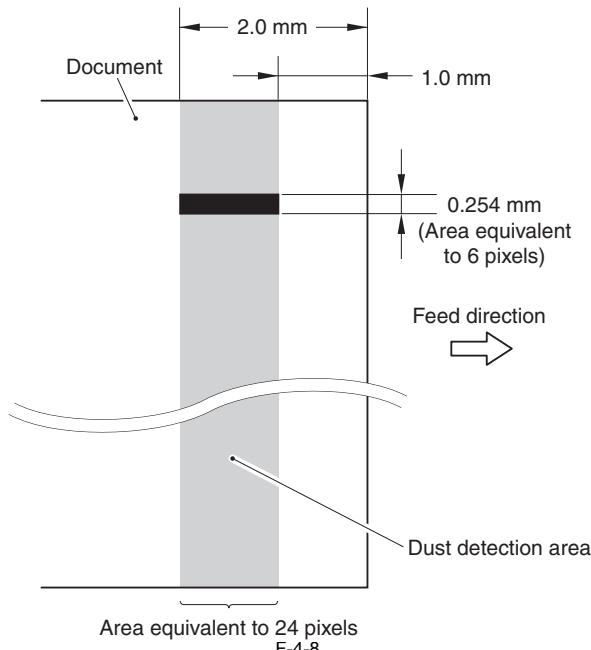

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine performs dust detection control when stream reading is performed on the ADF.

When dust is adhered to the scanning glass surface, the correction is made to remove the dust from the scanned image.
Dust detection control is executed for all documents for which stream reading is performed regardless of the mode.

Dust detection

When the CCD scans the leading edge of the document, if there is the object with the width of less than 6 pixels (0.254 mm), length of 24 pixels and the density from 16/255 to 188/255 in the area of 1.0 to 2.0 mm (equivalent to 24 pixels) from the leading edge of the document, the machine determines that "dust is adhered to the scanning glass surface".

However, since the dust detection control system is designed to perform detection for A4-size document, it is only applied in the area of 103 mm at both sides (= 206 mm) based on the center line. For a document of which width is larger than A4-size, there is an area at both edges where dust detection control is not performed.

Dust correction

When dust is detected, the correction of removing the dust is automatically performed based on the scanned data.

However, when a document does not have a margin or it has an image on the margin, the machine determines that dust is adhered to the scanning glass surface, which may cause incorrect correction to be performed. In such a case, disabling of the correction can be set in the user mode.

Adjustment/Cleaning > Automatic correction of feeder dust

ON: Perform automatic correction (initial setting)

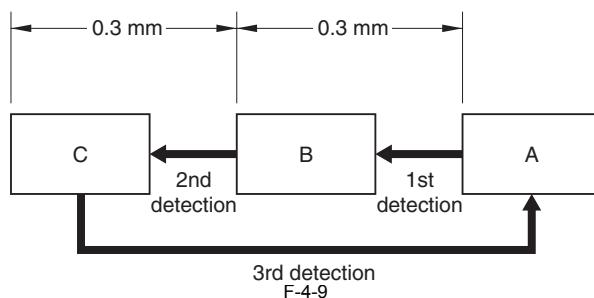

OFF: Do not perform automatic correction.

4.3.4.2 Stream Reading Position Shift

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

When dust is detected at the final document in the job, the stream reading position is shifted to prevent dust lines from being printed in the subsequent job. There are three stream reading positions, and the position is shifted sequentially every time dust is detected when the job is completed ([A] --> [B] --> [C]).

When dust is detected at the 3rd detection, the stream reading position returns to the original position ([C] --> [A]).

When dust is detected in three jobs consecutively, the alarm message "The scanning assembly is dirty" is displayed in a pop-up window on the control panel. The alarm message disappears when pressing the [OK] button displayed in the pop-up window.

When the subsequent job is started or the power is turned OFF/ON, information such as the number of times dust was detected or scanning positions is reset. Disabling of display of the alarm message can be set in the user mode.

Common specification settings > Display of the error for feeder dust

ON: Display the alarm message. (Initial setting)

OFF: Do not display the alarm message (It is possible to set the dust detection function only.)

4.4 Parts Replacement Procedure

4.4.1 ADF Unit + Reader Unit

4.4.1.1 Before Removing the ADF Unit + Reader Unit

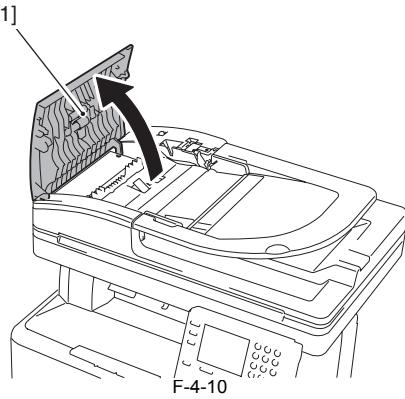

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the rear cover unit. (page 10-11) Reference [Removing the Rear Cover Unit]

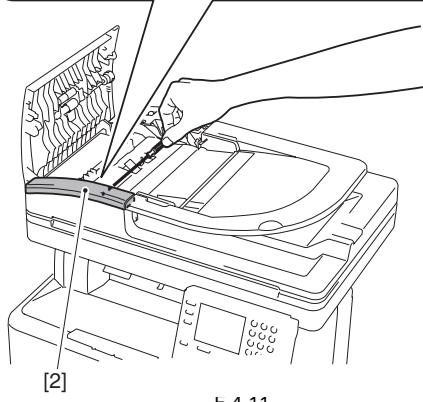

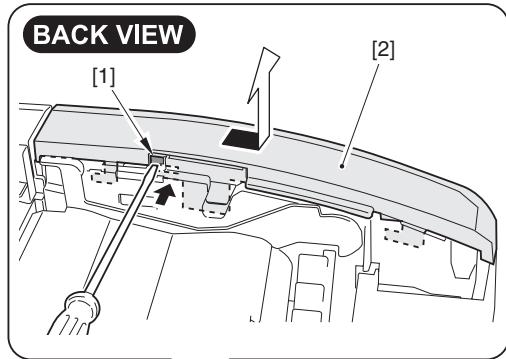

4.4.1.2 Removing the ADF Unit + Reader Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

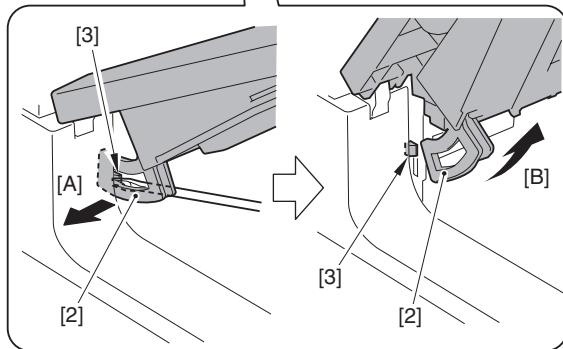

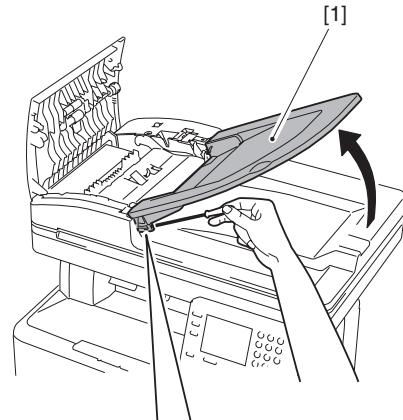

- 1) Open the ADF upper cover [1].

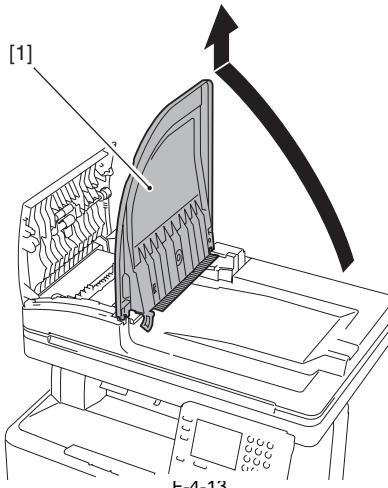

- 2) While pushing the claw [1], remove the ADF upper front cover [2].

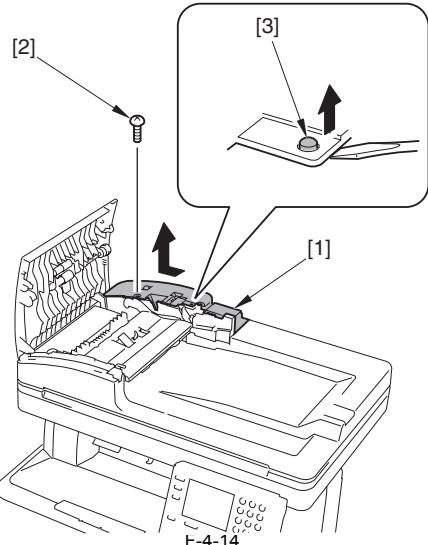

- 3) Open the ADF tray [1] to the position indicated in the figure below. Using a flat-blade screwdriver, press the hook [2] in the direction of the arrow [A] and release the claw [3] to remove the ADF tray in the direction of the arrow [B].

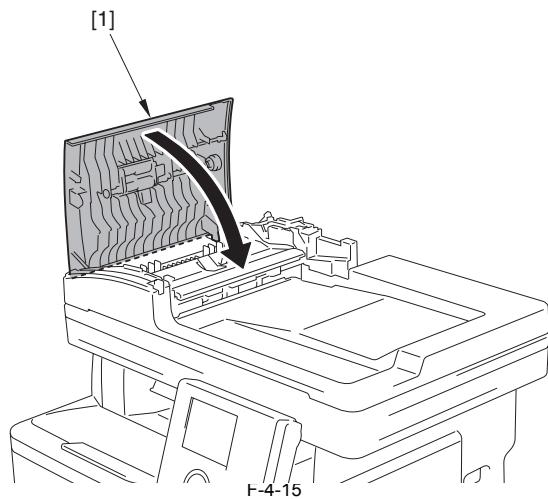

- 4) Open the ADF tray [1] to the position indicated in the figure below to remove it upward.

- 5) Remove the ADF upper rear cover [1].
 - 1 screw [2]
 - 1 boss [3]

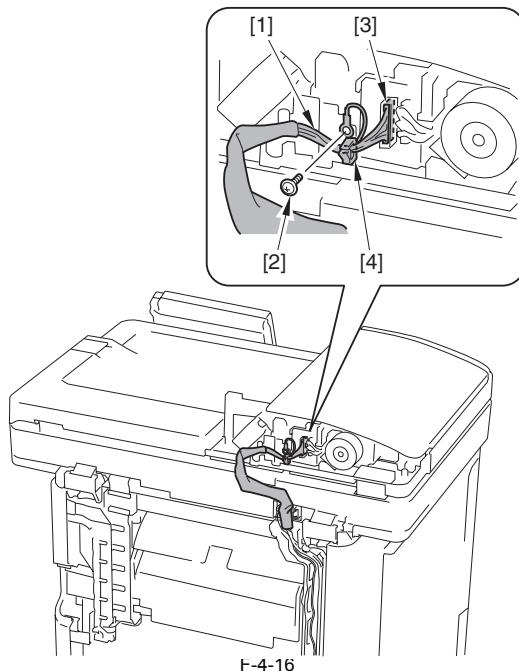

6) Close the ADF upper cover [1].

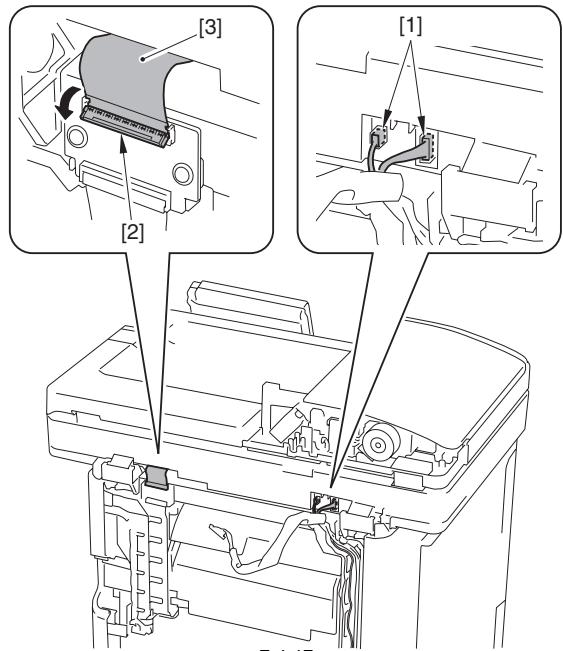

7) Remove the ADF unit communication cable [1].

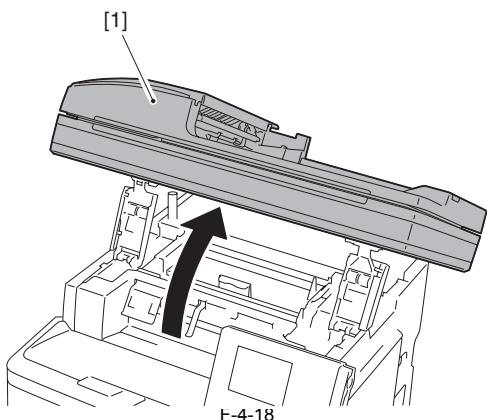

- 1 screw [2]
- 1 connector [3]
- 1 wire saddle [4]

8) Disconnect the 2 connectors [1]. Open the connector holder [2] to disconnect the flat cable [3].

9) Open the ADF unit + reader unit [1].

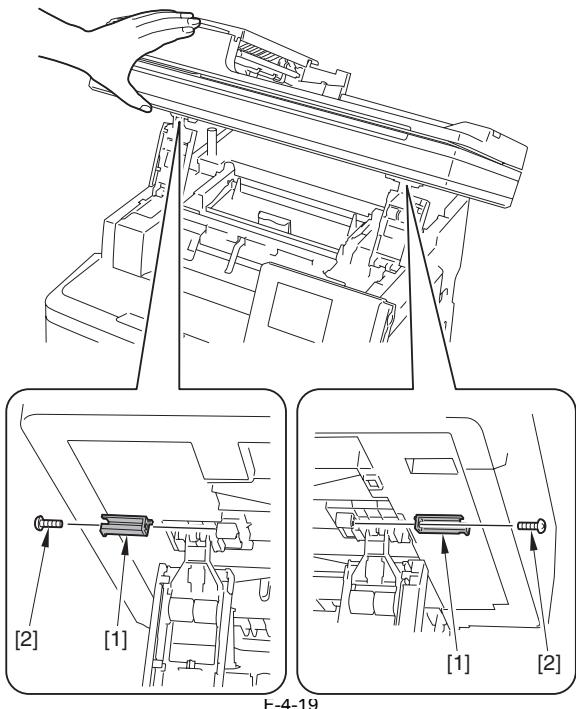

⚠ Points to note at work

Be sure not to close the ADF unit + reader unit hastily. If closing the ADF unit + reader unit hastily, the impact can cause damage.
Also be careful not to get your hands caught between the ADF unit + reader unit and the host machine.

10) Remove the 2 hinge stoppers [1].
- 2 screws (binding) [2]

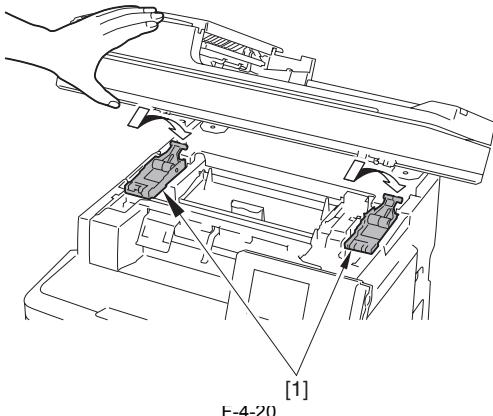

⚠ Points to Note When Removing the Hinge Stopper

When removing both the left and right hinge stoppers, the ADF + the reader unit close under their own weight, in which your hand may be caught. Be sure to perform the operation while holding them with one hand.

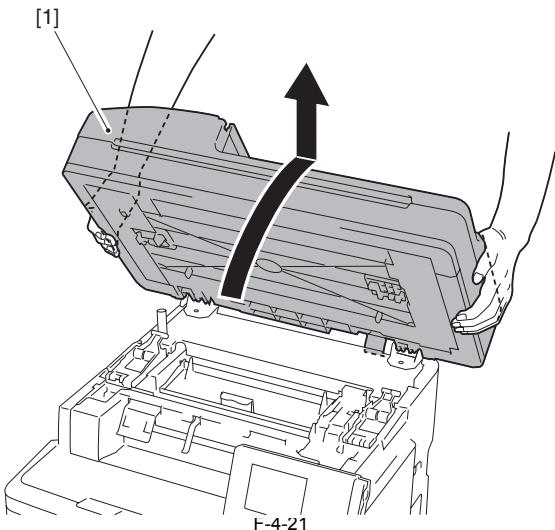

F-4-19

- 11) Bring the 2 hinges [1] down.

F-4-20

- 12) Open the ADF unit + reader unit [1] to the position indicated in the figure below to remove it upward.

F-4-21

After replacing the ADF unit, execute automatic detection of the CCD reading position at ADF stream reading in the following service mode.
COPIER> FUNCTION> INSTALL> STRD-POS

[Operation]

Adjust the reading position by moving the scanner in increments of 0.1 mm.

[Time]

When the lamp is turned on: Adjustment time; 10 seconds
When the lamp is not turned on: Lamp adjustment time; 10 to 30 seconds
+ Adjustment time; 10 seconds

4.4.1.4 Procedure after Replacing the Reader Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the reader unit, execute automatic detection of the CCD reading position at ADF stream reading in the following service mode.
COPIER> FUNCTION> INSTALL> STRD-POS

[Operation]

Adjust the reading position by moving the scanner in increments of 0.1 mm.

[Time]

When the lamp is turned on: Adjustment time; 10 seconds
When the lamp is not turned on: Lamp adjustment time; 10 to 30 seconds
+ Adjustment time; 10 seconds

4.4.2 Reader Unit

4.4.2.1 Before Removing the Reader Unit

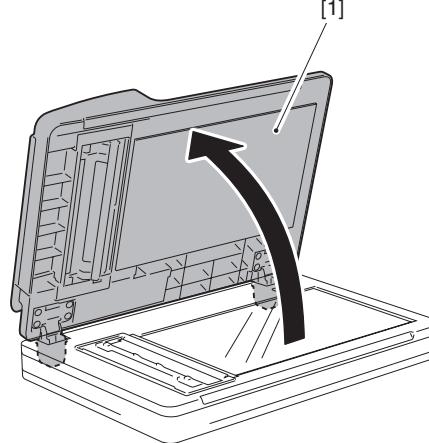

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ADF unit + reader unit. ([page 4-8](#)) Reference [Removing the ADF Unit + Reader Unit]

4.4.2.2 Removing the Reader Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Open the ADF unit [1].

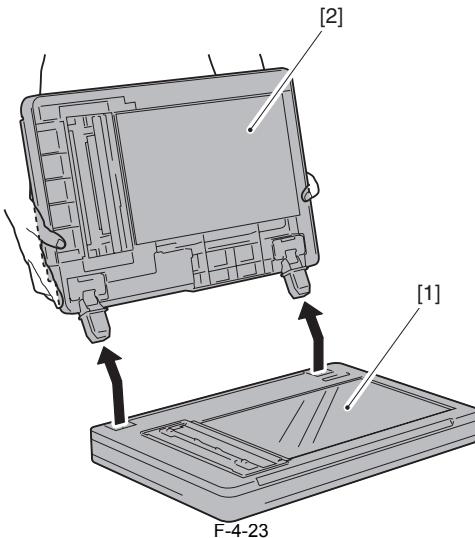

F-4-22

- 2) Remove the ADF unit [2] from the Reader Unit [1].

4.4.1.3 Procedure after Replacing the ADF Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

**MEMO:**

The CCD unit in the reader unit cannot be replaced in the field. If the CCD unit is broken, replace the reader unit.

4.4.2.3 Procedure after Replacing the Reader Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the reader unit, execute automatic detection of the CCD reading position at ADF stream reading in the following service mode.

COPIER> FUNCTION> INSTALL> STRD-POS

[Operation]

Adjust the reading position by moving the scanner in increments of 0.1 mm.

[Time]

When the lamp is turned on: Adjustment time; 10 seconds

When the lamp is not turned on: Lamp adjustment time; 10 to 30 seconds
+ Adjustment time; 10 seconds

5.1 Basic Construction

5.1.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

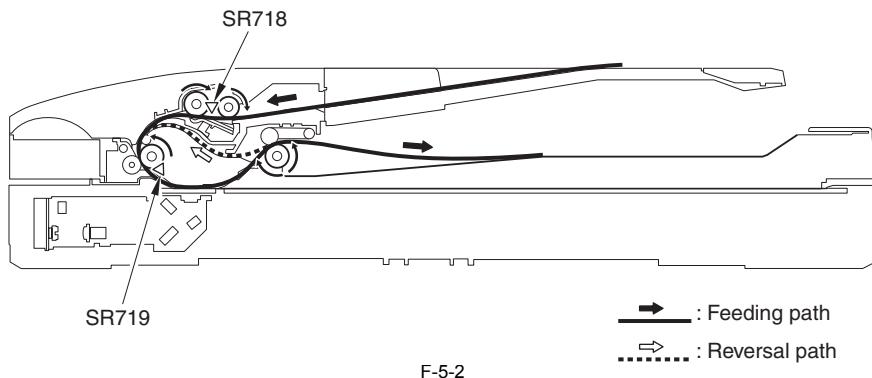

- | | | | | | |
|------|--------------------|------|--------------------------------|------|------------------------|
| [1] | Document tray | [2] | Slide guide | [3] | ADF delivery roller |
| [4] | ADF pickup roller | [5] | ADF separation roller | [6] | ADF pickup motor (M13) |
| [7] | CCD unit | [8] | ADF feed roller | [9] | Reading glass surface |
| [10] | ADF separation pad | [11] | ADF delivery solenoid (SL5016) | [12] | ADF delivery tray |

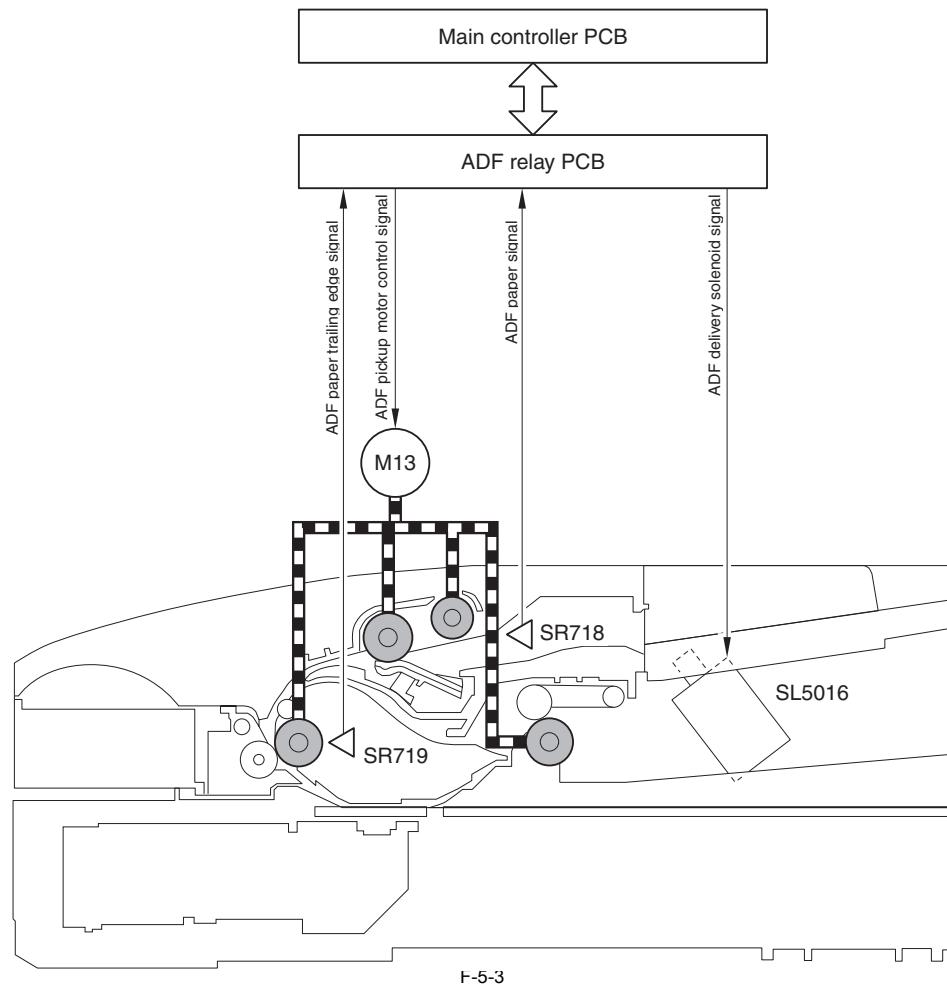

Reading at ADF

- 1) When the ADF paper sensor (SR718) detects the document on the document tray, the ADF pickup motor (M13) works and the ADF pickup roller descends to the surface of the document.
- 2) A document set on the document ray is transported to the ADF separation roller by the ADF pickup roller while being pressed by the slide guide so that it does not skew.
- 3) Only one sheet of document is separated by the ADF separation roller and the ADF separation pad.
- 4) The document is transported to the reading glass surface by the ADF feed roller.
- The ADF paper trailing edge sensor (SR719) detects the leading edge of the document.
- 5) While being transported by the ADF feed roller, the document is read by the CCD unit.
- 6) The document is delivered on the ADF delivery tray by the ADF delivery roller.

A 2-sided original with its first side read is delivered to the reading position again with the reversal path.

All the ADF rollers are driven by the ADF pickup motor.

5.2 Basic Operation

5.2.1 Operation Mode

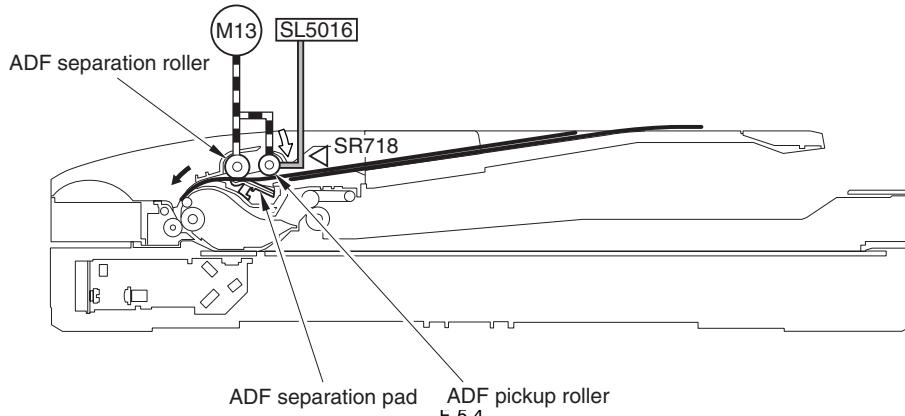

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Single-sided continuous pickup

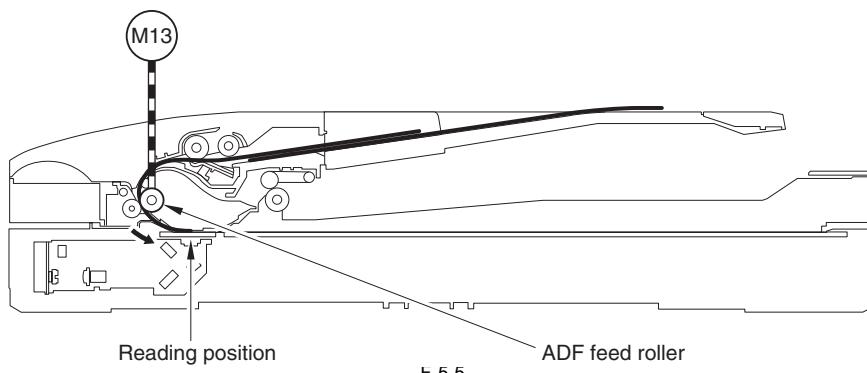

The following shows the operation sequence when two sheets of single-sided documents are set on the document tray.

- 1) The ADF paper sensor (SR718) detects the document loaded on the document tray, and sends a signal indicating "paper exists" to the main controller.
- 2) The ADF pickup motor (M13) rotates forward.

Driven by the ADF pickup motor, the ADF pickup roller moves down until it reaches the document, and then feeds the document. In this condition, one sheet of the upper-side document is picked up by the ADF separation roller and ADF separation pad.

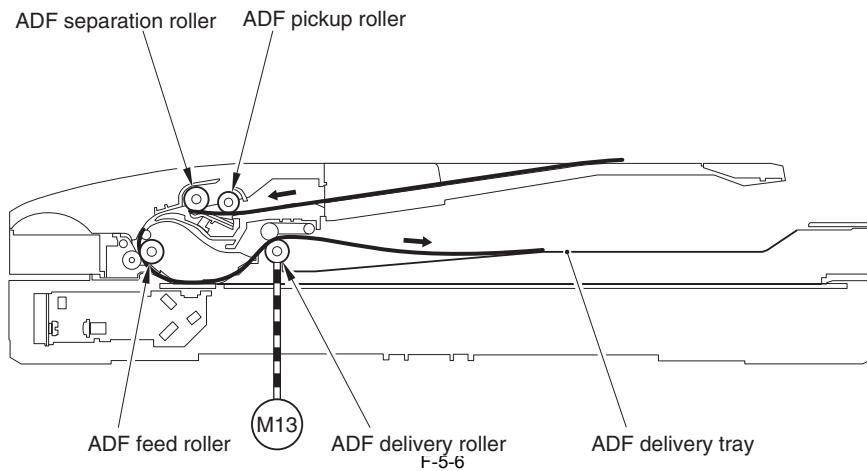

- 3) When the lead edge of the document reaches the ADF feed roller, the feed speed becomes approximately 1.2 times (which is the same as the reading speed). If no 'stop' request is sent from the main controller when the lead edge of the document reaches in front of the reading position, reading operation starts.

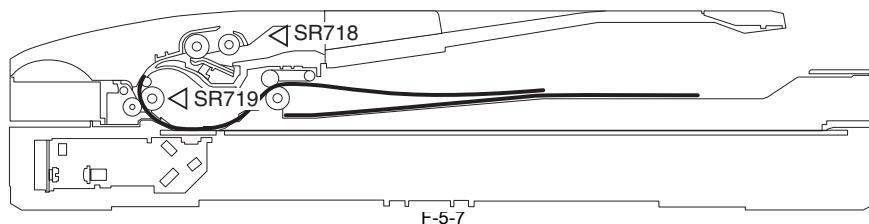

- 4) When reading is completed, the document is delivered to the ADF delivery tray by the ADF delivery roller.

When a specified period of time elapses after the trailing edge of the first page passes through the ADF separation roller, the second page is picked up by the ADF pickup roller.

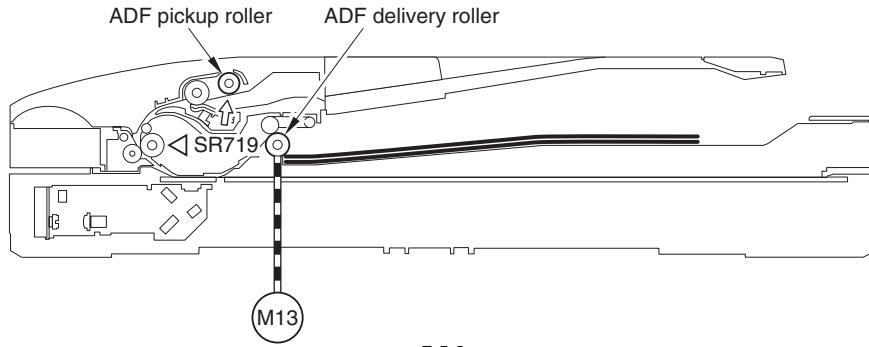

Because the ADF feed roller rotates faster than the ADF separation roller, a specified interval is secured between the first and second pages.

- 5) When the trailing edge of the second page passes through the ADF paper trailing edge sensor (SR719), the ADF paper sensor detects presence/absence of the paper.
When no document is detected, the document is considered to be the last page.

- 6) When a specified period of time (time until the trailing edge of the document passes through the ADF delivery roller) elapses after the trailing edge of the document passes through the ADF paper trailing edge sensor, the ADF pickup motor stops and then the ADF pickup roller moves up to a specified position.

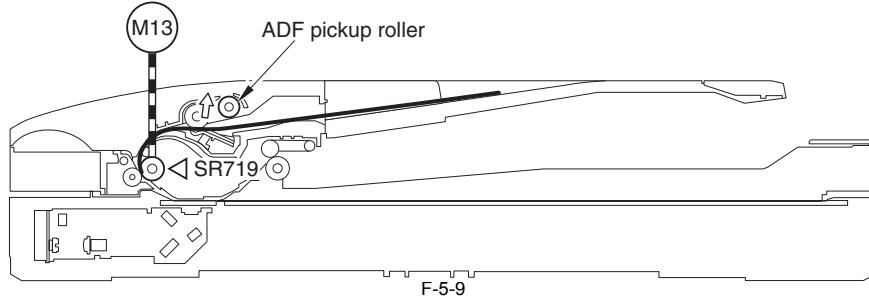

F-5-8

Double-sided document reading

The procedure of reading a double-sided document is the same as that of reading a single-sided document until the step where the lead edge of the document reaches the ADF paper trailing edge sensor. The following shows the operational sequence afterwards.

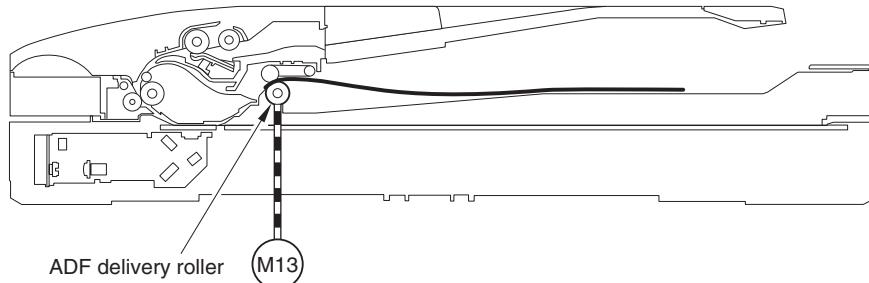

- 1) When the ADF paper trailing edge sensor detects the lead edge of the document, the ADF pickup motor stops and then the ADF pickup roller moves up.
When the ADF pickup roller moves up, feeding of the second and later pages stops.

As soon as receiving a drive signal from the main controller, the ADF pickup motor restarts feeding.

F-5-9

- 2) When the trailing edge of the document is transported until it is caught between the ADF delivery rollers, the ADF pickup motor stops.

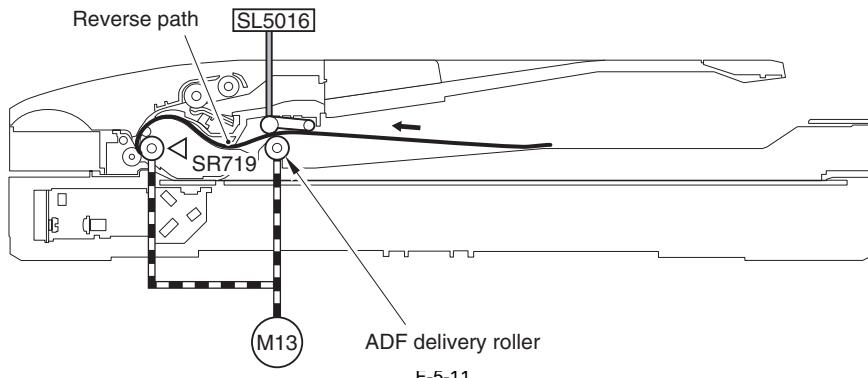

F-5-10

- 3) The ADF pickup motor rotates in reverse. The document is fed through the reverse path.

When the ADF paper trailing edge sensor detects the lead edge of the document, the ADF pickup motor stops.

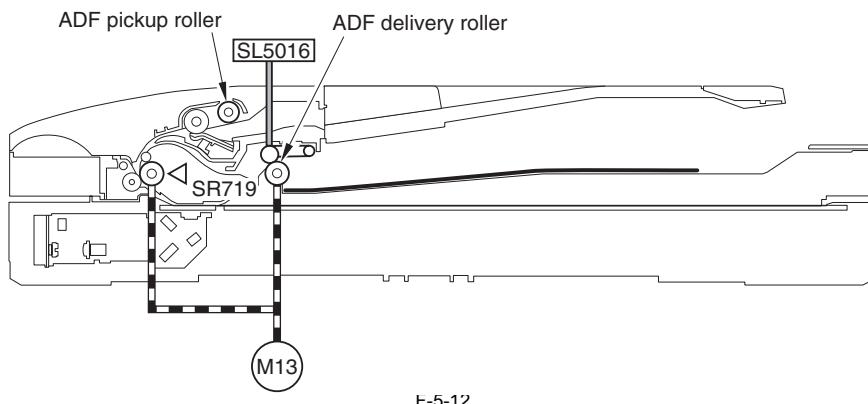

As soon as receiving a drive signal from the main controller, the ADF pickup motor rotates forward. In this condition, the ADF delivery rollers are disengaged by driving the ADF pickup solenoid (SL5016) so that the document is not pulled.

- 4) When the trailing edge of the document passes through the ADF delivery roller, the ADF pickup solenoid is turned OFF and the ADF delivery rollers are engaged.

- 5) When a specified period of time (time until the trailing edge of the document passes through the ADF delivery roller) elapses after the trailing edge of the document passes through the ADF paper trailing edge sensor, the ADF pickup motor stops.

In the case of double-sided document reading, the ADF pickup roller has already moved up to a specified position.

5.2.2 Document Size Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine does not perform document size detection. (The machine is not equipped with the document size sensor.)
The machine performs reading in the size specified on the control panel when reading the document.

5.3 Detection Jams

5.3.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Jam detection

T-5-1

Jam Code	Jam Type	Jam Condition	Single-sided Reading	Double-sided Reading
0001H	Delay jam	The leading edge of paper does not reach the ADF paper trailing edge sensor within 1.8 sec after the trailing edge of precedent page passes through the ADF paper trailing edge sensor in 1-sided multiple jobs.	Yes	-
		The leading edge of paper does not reach the ADF paper trailing edge sensor within 1.2 sec after reverse operation starts in 2-sided job.	-	Yes
0002H	Residual jam	The trailing edge of paper does not passes through the ADF paper trailing edge sensor within 3.4 sec after the leading edge of paper reaches the ADF paper trailing edge sensor in 1-sided job.	Yes	-
		The trailing edge of paper does not passes through the ADF paper trailing edge sensor within 3.5 sec after the leading edge of paper reaches the ADF paper trailing edge sensor in 2-sided job.	-	Yes
0094H	In-body residual jam (initial residual)	The ADF paper trailing edge sensor detects paper at power-ON.	Yes	Yes
0095H	Pickup NG	The paper is removed from the document tray during the pickup operation (within 0.1 sec after the start key is pressed).	Yes	Yes

Jam removal

To remove a jam, open the ADF upper cover, remove a jammed sheet, and then set a document on the document tray. However, a jam is not removed when the ADF paper trailing edge sensor detects the presence of paper (when residual paper exists).

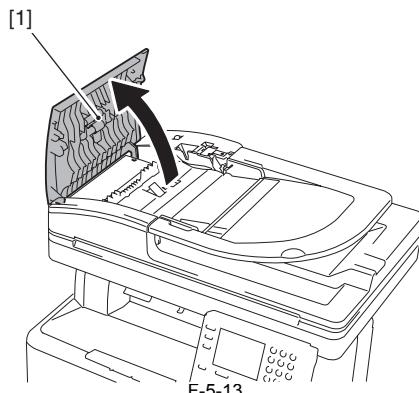

5.4 ADF/DADF

5.4.1 ADF/DADF

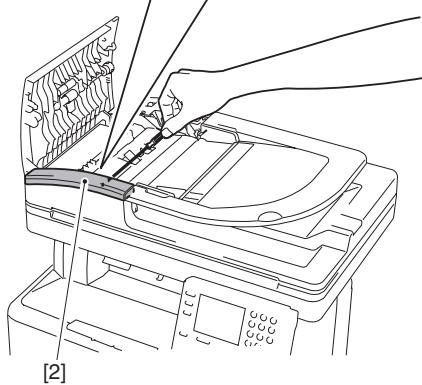

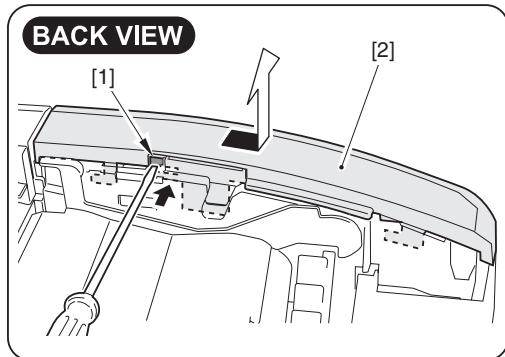

5.4.1.1 Removing the ADF unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

1) Open the ADF upper cover [1].

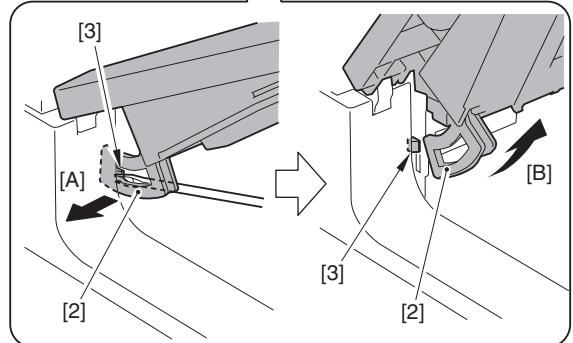

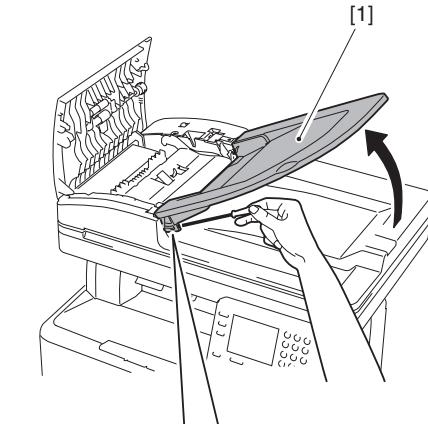

2) While pushing the claw [1], remove the ADF upper front cover [2].

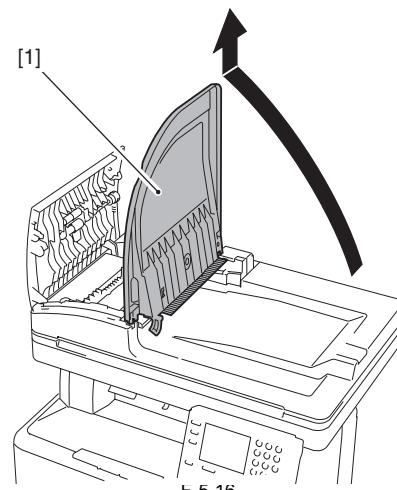

F-5-14

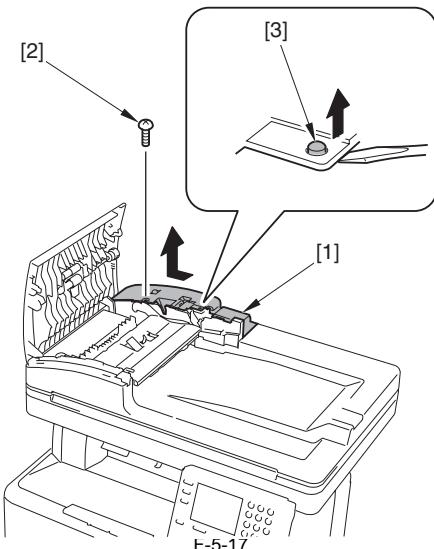

3) Open the ADF tray [1] to the position indicated in the figure below. Using a flat-blade screwdriver, press the hook [2] in the direction of the arrow [A] and release the claw [3] to remove the ADF tray in the direction of the arrow [B].

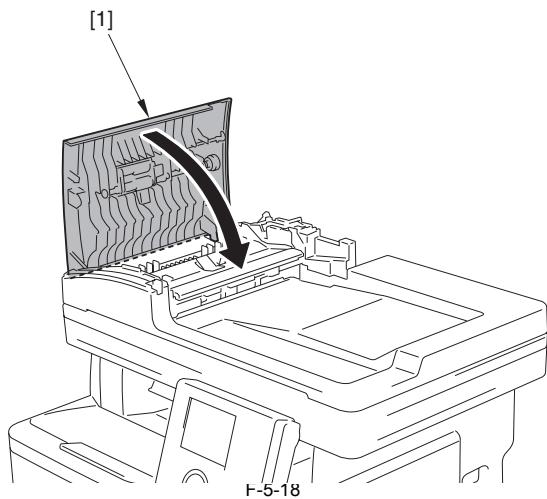

4) Open the ADF tray [1] to the position indicated in the figure below to remove it upward.

5) Remove the ADF upper rear cover [1].
 - 1 screw [2]
 - 1 boss [3]

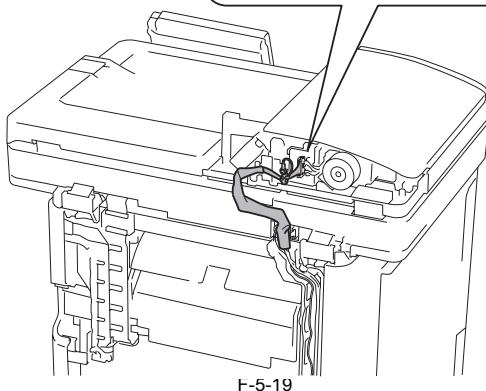

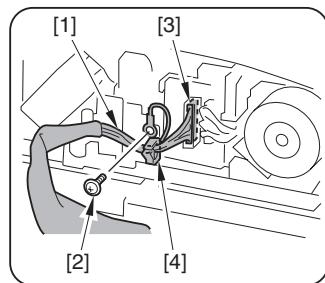

6) Close the ADF upper cover [1].

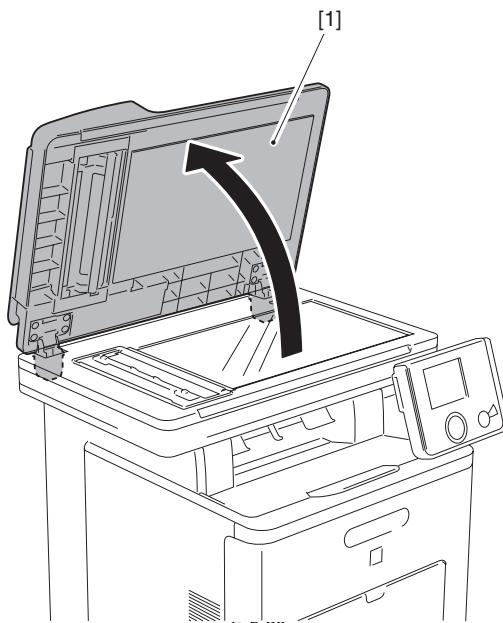

7) Remove the ADF unit communication cable [1].

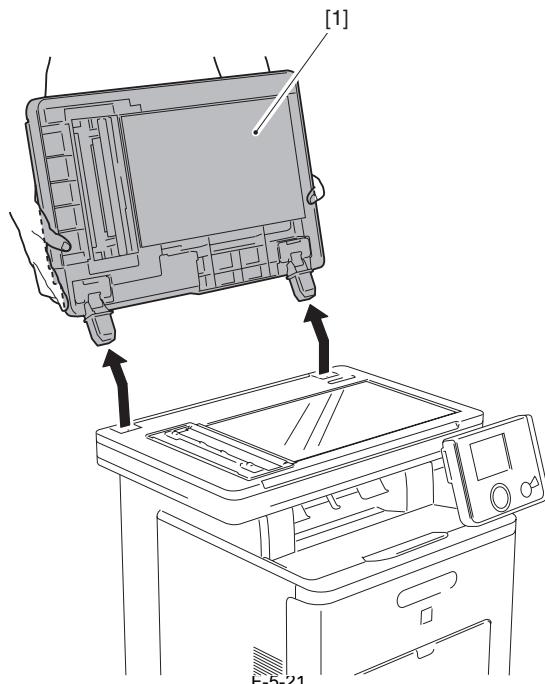

- 1 screw [2]
- 1 connector [3]
- 1 wire saddle [4]

8) Open the ADF unit [1].

9) Remove the ADF unit [1].

5.4.1.2 Procedure after Replacing the ADF Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the ADF unit, execute automatic detection of the CCD reading position at ADF stream reading in the following service mode.

COPIER> FUNCTION> INSTALL> STRD-POS

[Operation]

Adjust the reading position by moving the scanner in increments of 0.1 mm.

[Time]

When the lamp is turned on: Adjustment time; 10 seconds

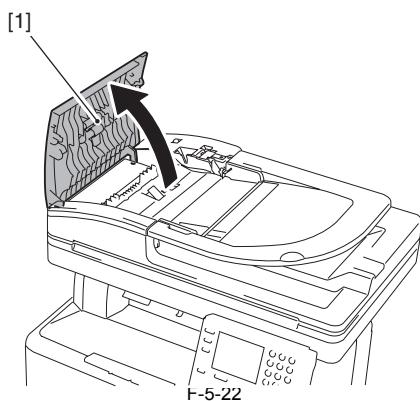

When the lamp is not turned on: Lamp adjustment time; 10 to 30 seconds + Adjustment time; 10 seconds

5.4.2 Pickup Feed Unit

5.4.2.1 Removing the ADF Pickup Feed Unit

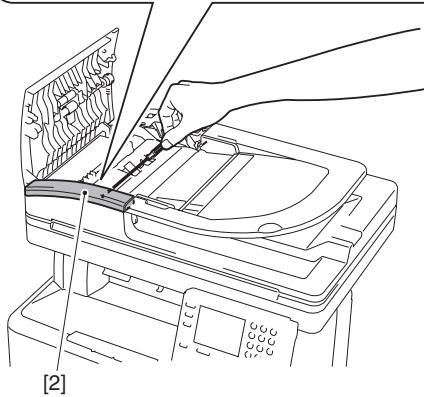

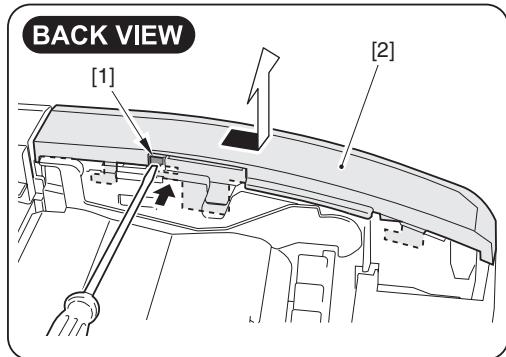

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

1) Open the ADF upper cover [1].

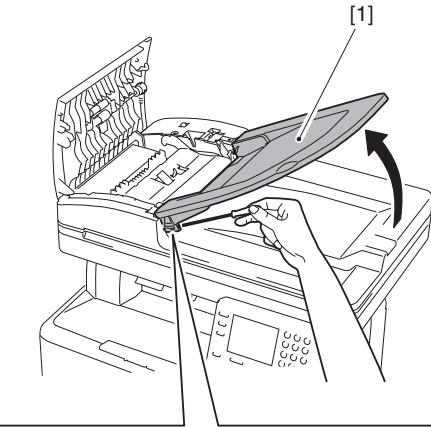

F-5-22

2) While pushing the claw [1], remove the ADF upper front cover [2].

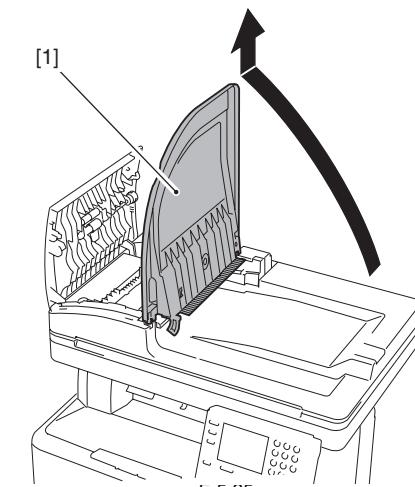

F-5-23

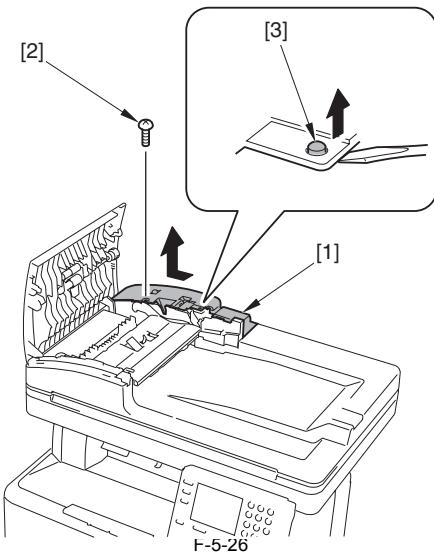

3) Open the ADF tray [1] to the position indicated in the figure below. Using a flat-blade screwdriver, press the hook [2] in the direction of the arrow [A] and release the claw [3] to remove the ADF tray in the direction of the arrow [B].

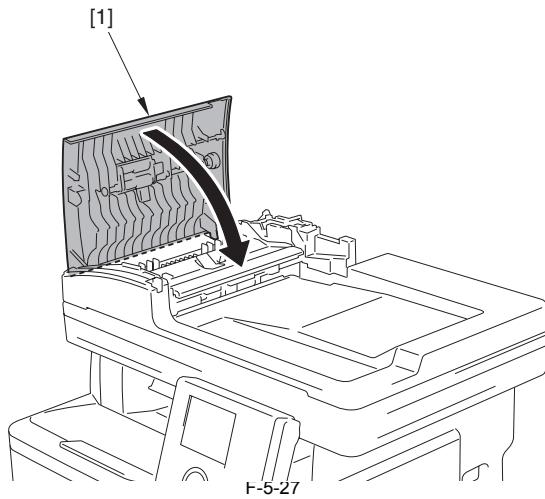

4) Open the ADF tray [1] to the position indicated in the figure below to remove it upward.

5) Remove the ADF upper rear cover [1].
 - 1 screw [2]
 - 1 boss [3]

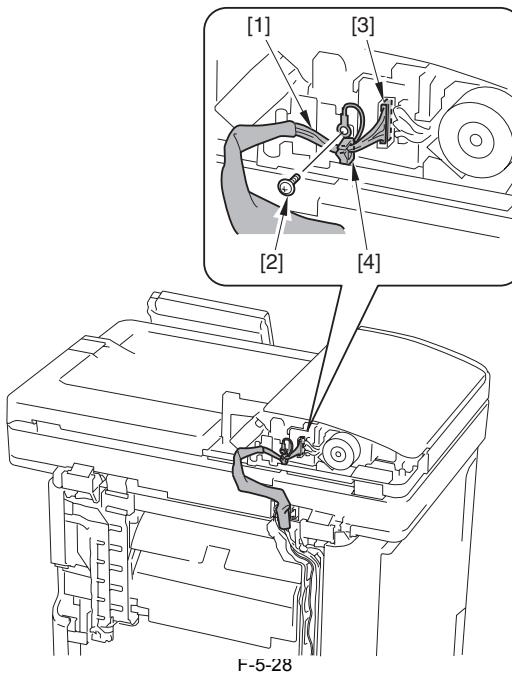

6) Close the ADF upper cover [1].

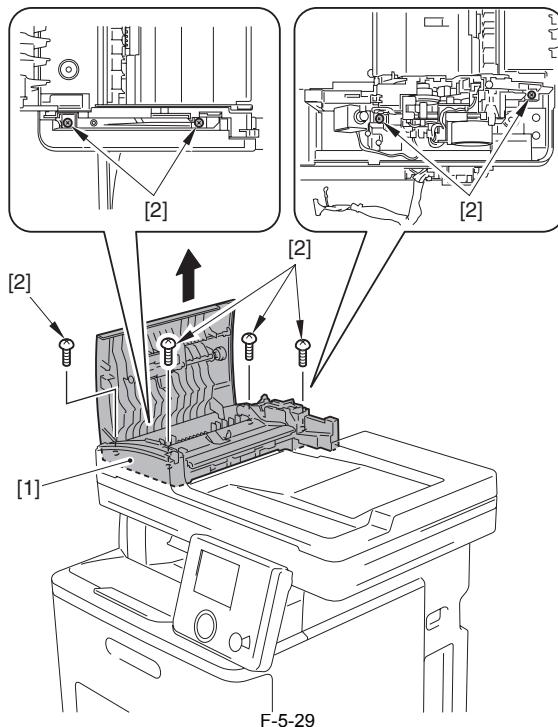

7) Remove the ADF unit communication cable [1].

- 1 screw [2]
- 1 connector [3]
- 1 wire saddle [4]

8) Remove the ADF pickup feed unit [1].
- 4 screws [2]

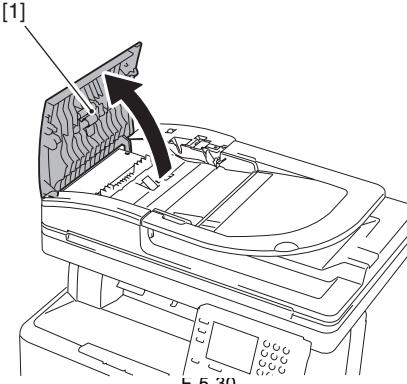

5.4.3 Pick-up Roller

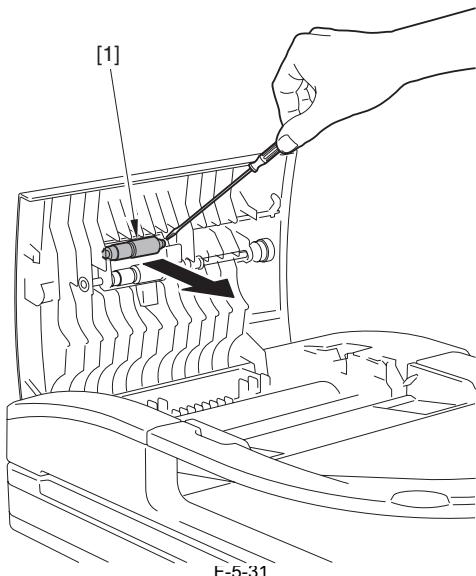

5.4.3.1 Removing the ADF Pickup Roller

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

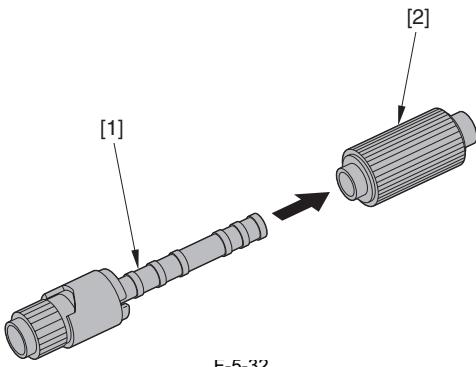

1) Open the ADF upper cover [1].

2) Remove the ADF pickup roller unit [1].

3) Remove the ADF pickup roller [2] from the ADF pickup roller shaft [1].

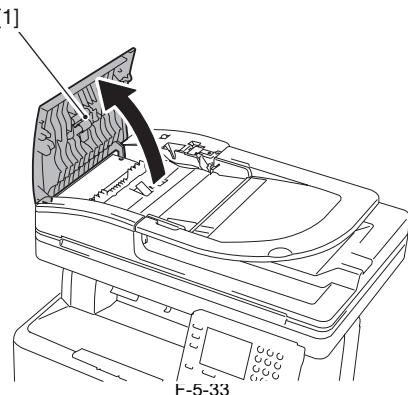

F-5-32

5.4.4 Separation Roller

5.4.4.1 Removing the ADF Separation Roller

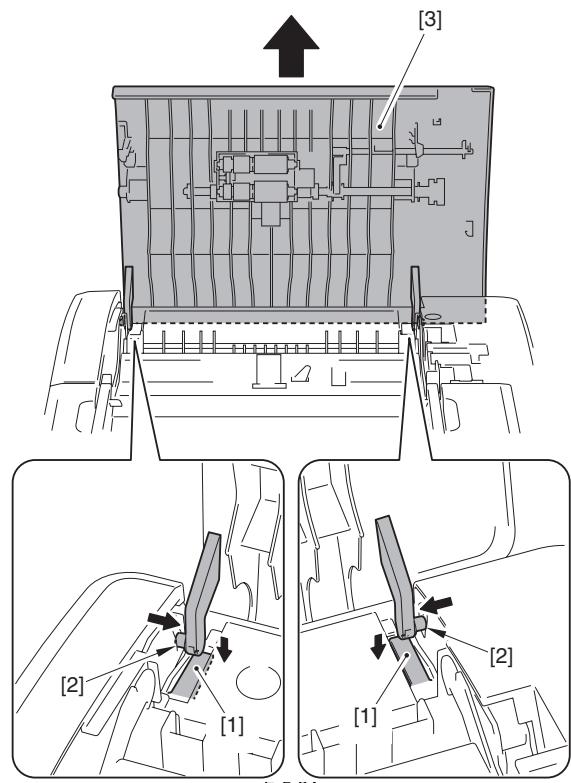

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Open the ADF upper cover [1].

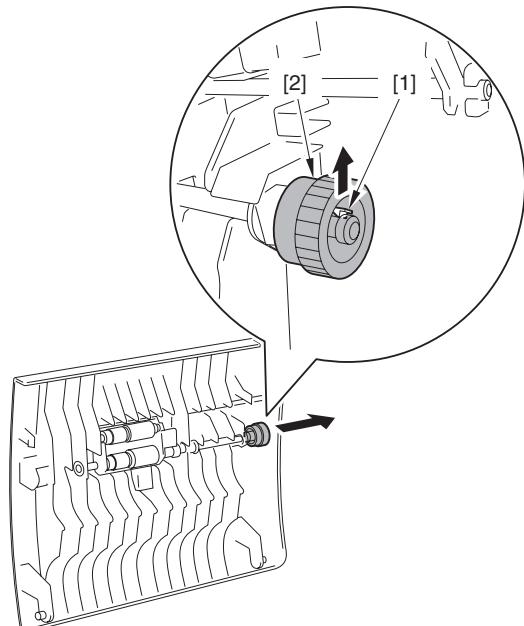

F-5-33

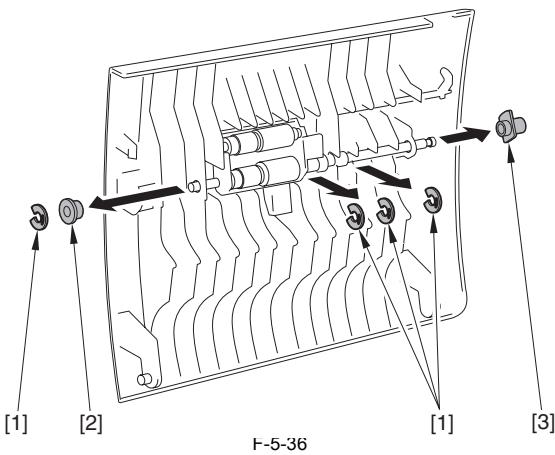

- 2) While pressing the shaft retainer [1], release the 2 shafts [2] and remove the ADF upper cover [3].

3) Release the claw [1] to remove the gear [2].

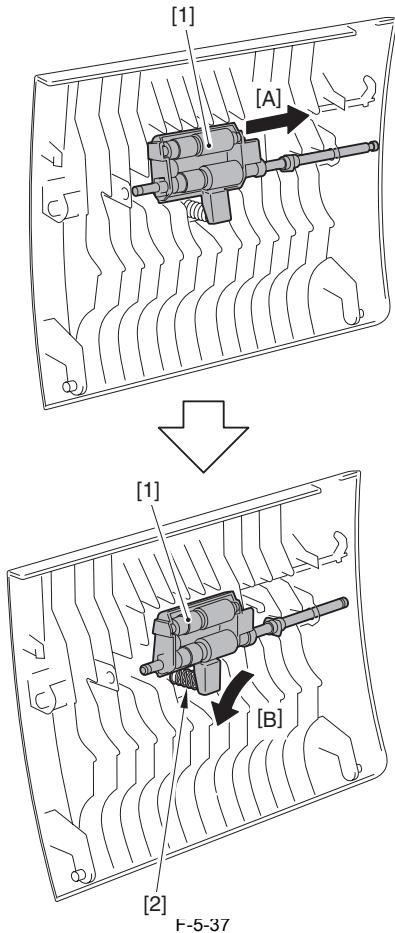

4) Remove the 4 grip-rings [1], the bushing [2] and the bushing [3].

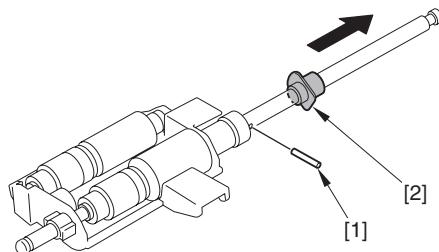

- 5) Move the ADF separation roller unit [1] in the direction of the arrow [A] to remove it from the ADF upper cover in the direction of the arrow [B].

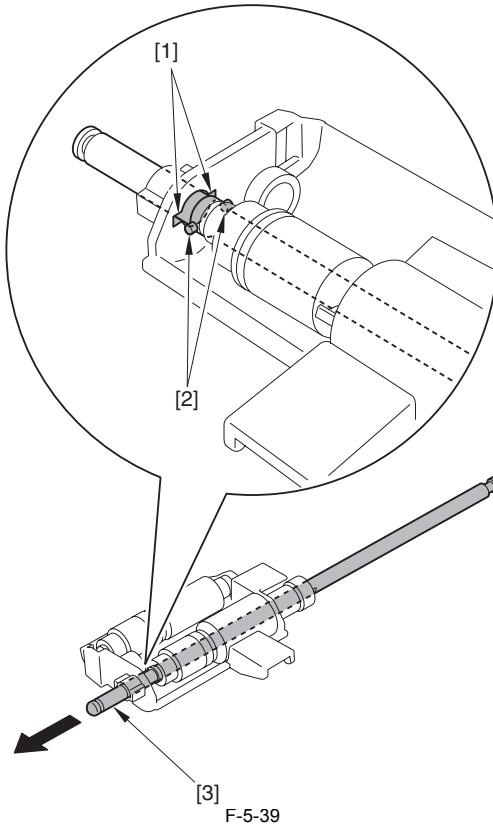

⚠
Do not lose the spring [2] when removing the ADF separation roller unit [1].

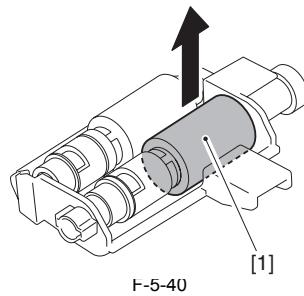

- 6) Remove the parallel pin [1] and the bushing [2].

- 7) Fit the groove [1] of the ADF separation roller cover with the projection [2] of the ADF separation roller shaft to remove the ADF separation roller shaft [3].

- 8) Remove the ADF separation roller [1].

5.4.5 Pick-up Motor

5.4.5.1 Before Removing the ADF Pickup Motor

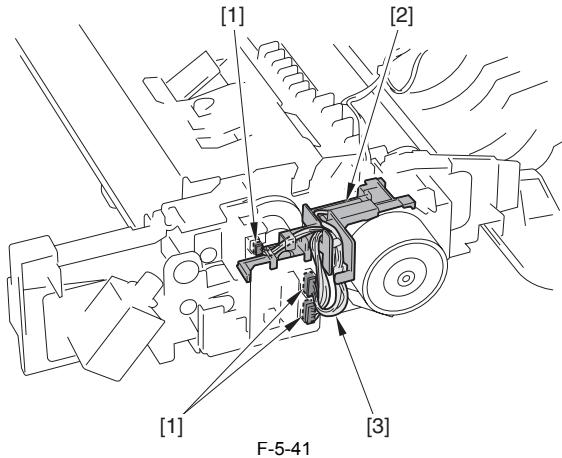

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ADF pickup feed unit.([page 5-8](#))Reference [Removing the ADF Pickup Feed Unit]

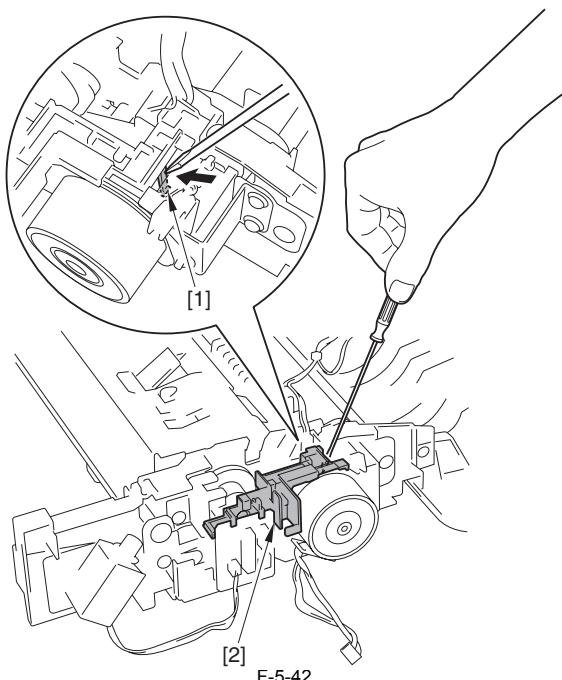

5.4.5.2 Removing the ADF Pickup Motor

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

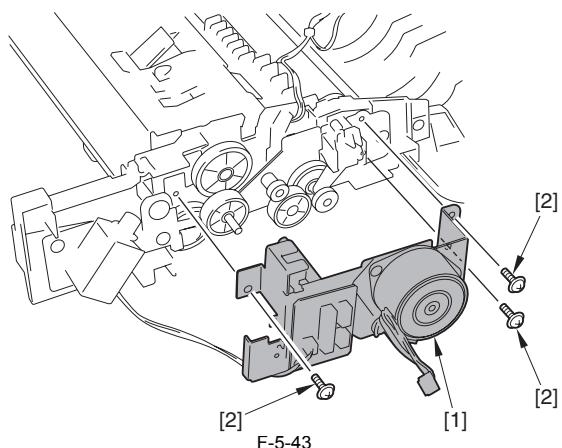

- 1) Disconnect the 3 connectors [1] and free the harness [3] from the harness guide [2].

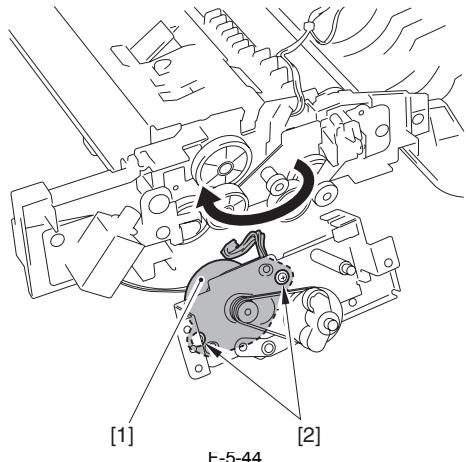

2) Remove the claw [1] to remove the harness guide [2].

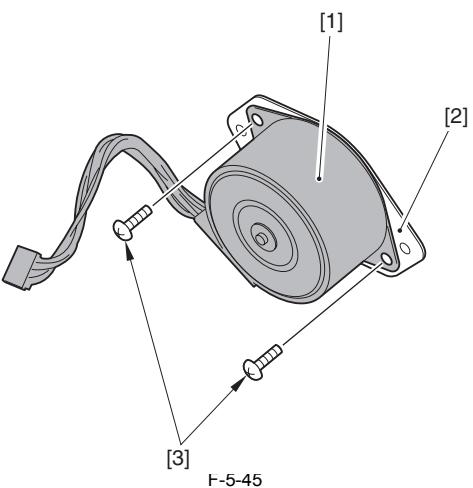

3) Remove the ADF pickup motor unit [1].
-3 screws [2]

4) Turn over the ADF pickup motor unit.
5) Remove the ADF pickup motor [1].
- 2 screws [2]

6) Remove the fixing plate [2] from the ADF pickup motor [1].
- 2 screws [3]

5.4.6 Pick-up Solenoid

5.4.6.1 Before Removing the ADF Pickup Solenoid

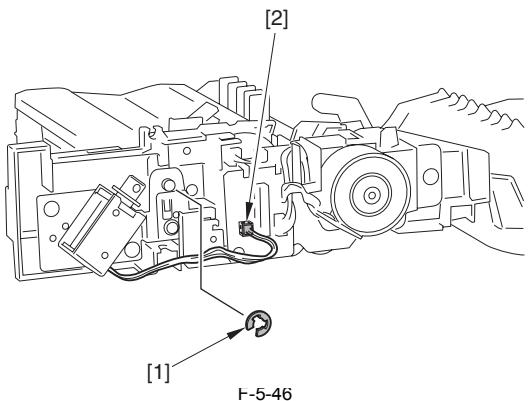

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

1) Remove the ADF pickup feed unit.(page 5-8)Reference [Removing the ADF Pickup Feed Unit]

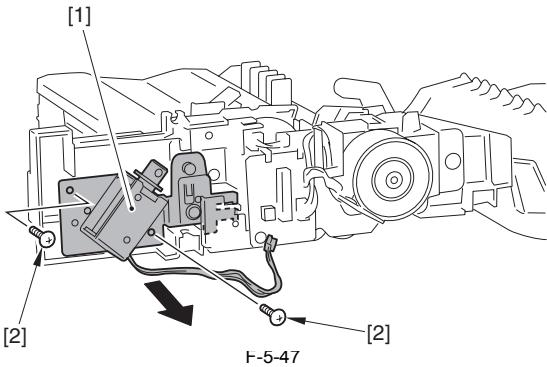

5.4.6.2 Removing the ADF Pickup Solenoid

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

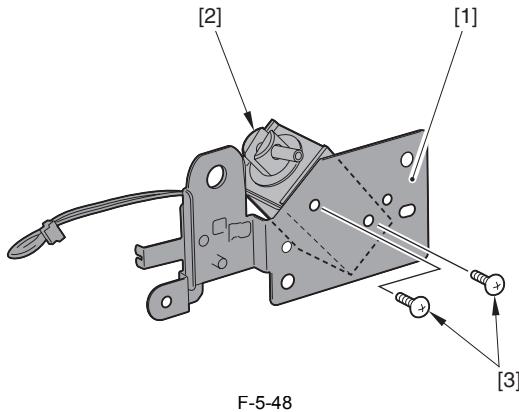

1) Remove the grip-ring [1] and disconnect the connector [2].

2) Remove the ADF pickup solenoid unit [1].
-2 screws [2]

- 3) Remove the ADF pickup solenoid [2] from the ADF pickup solenoid unit [1].
-2 screws [3]

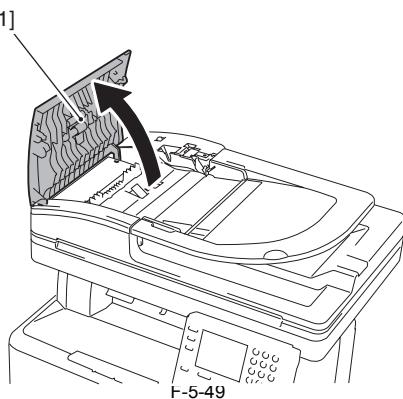

5.4.7 Separation Pad

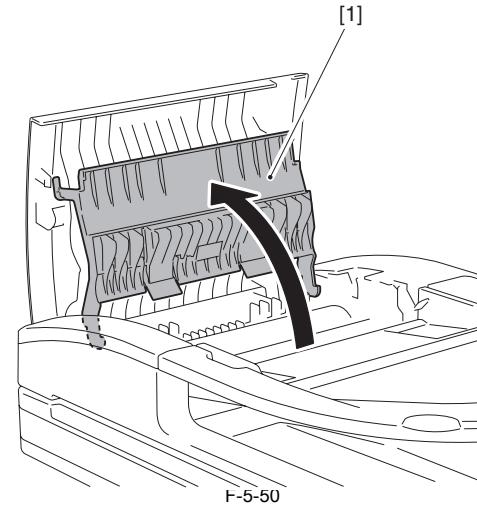

5.4.7.1 Removing the ADF Separation Pad

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

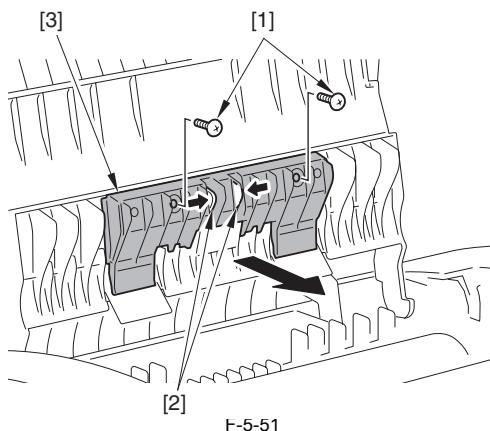

- 1) Open the ADF upper cover [1].

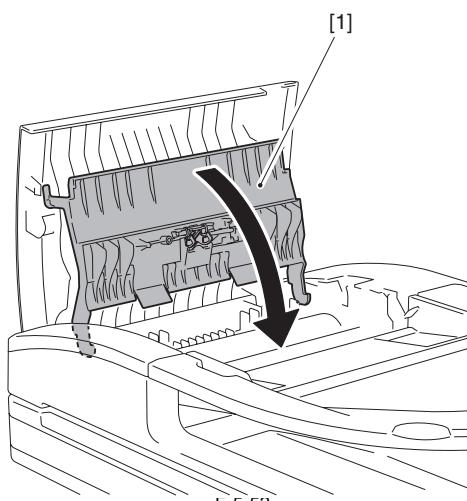

- 2) Open the inner guide [1].

- 3) Remove the 2 screws [1].
4) Push the 2 claws [2] in the direction of the arrow [A] to remove the ADF separation claw cover [3].

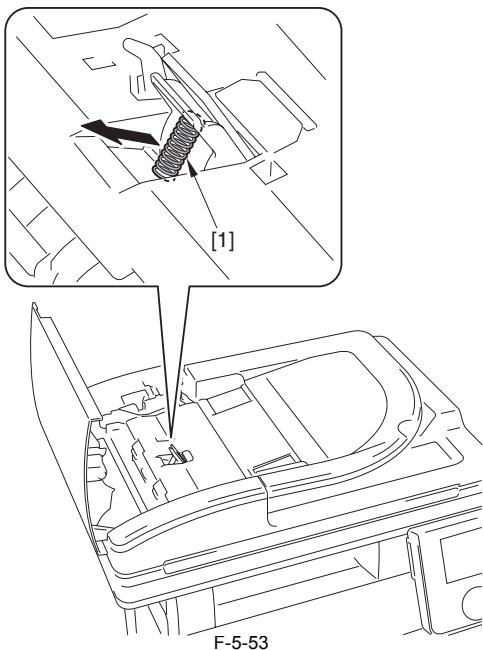

- 5) Close the inner guide [1].

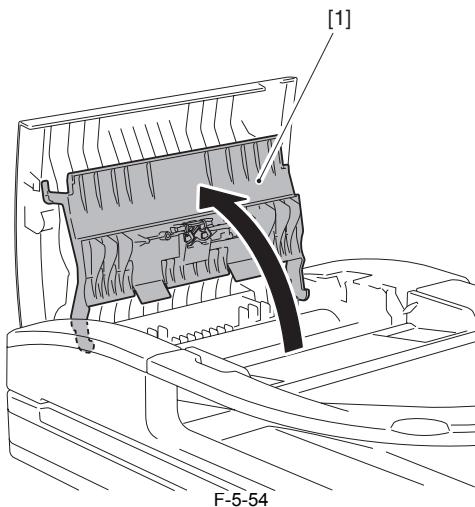

- 6) Remove the spring [1].

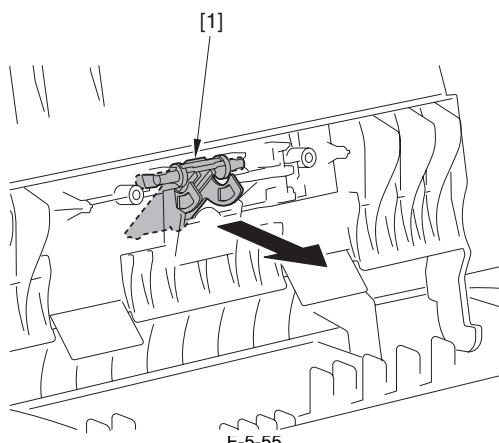

Be careful not to lose the removed spring [1].

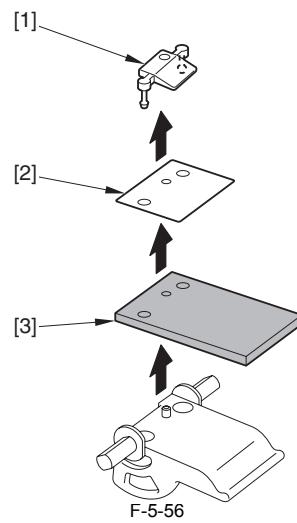

7) Open the inner guide [1].

8) Remove the ADF separation pad unit [1].

9) Remove the separation pad fixing pin [1] and the sheet [2], and then remove the ADF separation pad [3].

6.1 Overview/Configuration

6.1.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

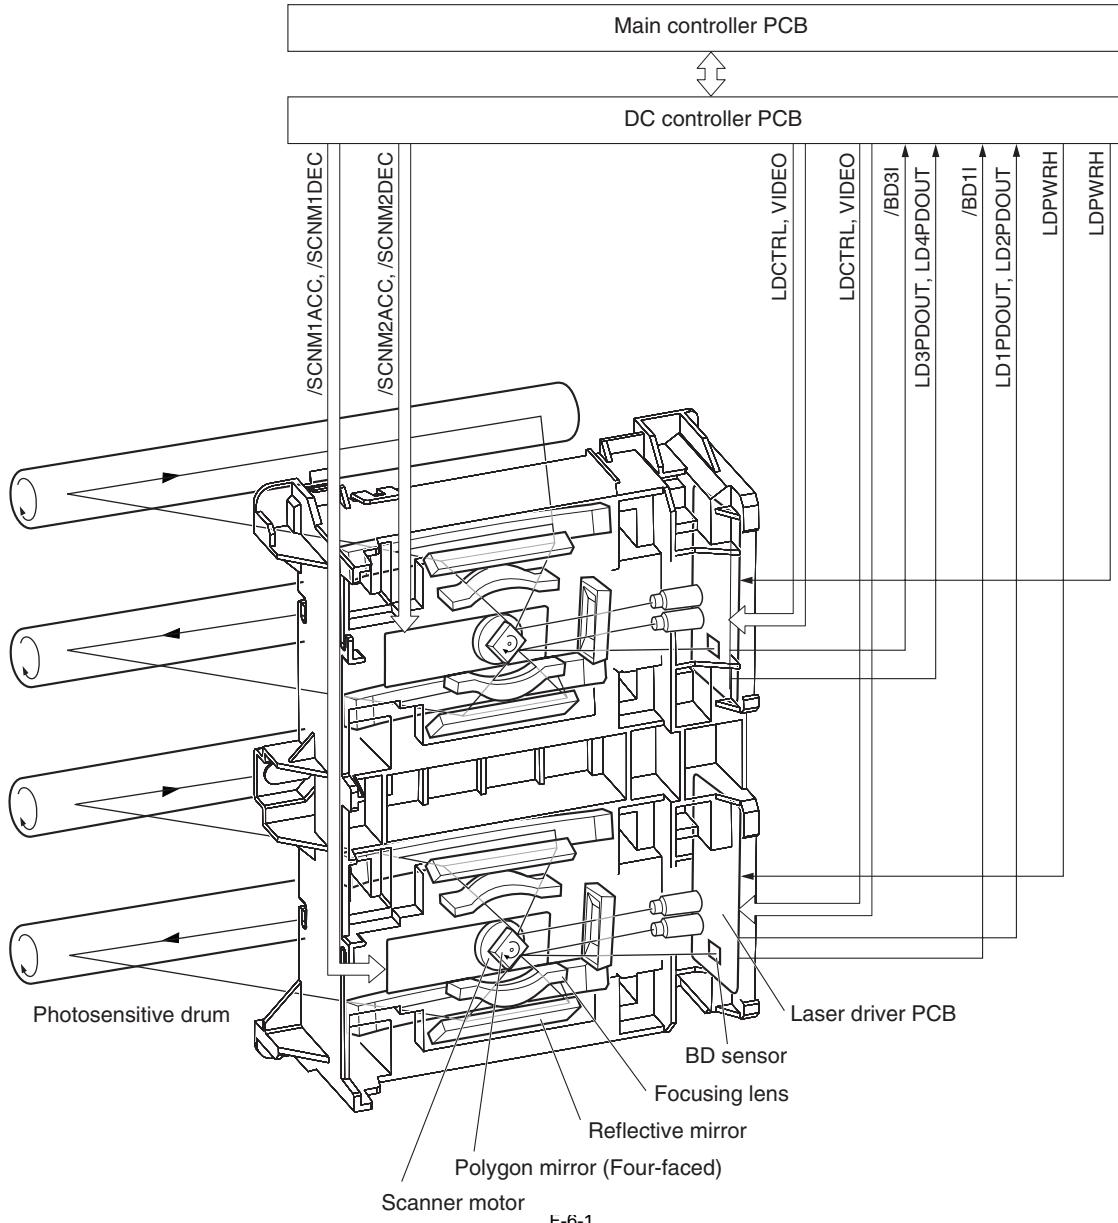

The laser exposure system forms latent images on the photosensitive drum according to the video signals with the control by the DC controller.

The laser exposure system consists of the laser scanner unit.

The 2 laser driver PCBs, the 2 scanner motors, and the 2 polygon mirrors are installed on the laser scanner unit.

There are two (two colors of) laser diodes for one laser driver PCB. The laser beams of two colors emitted from the laser diode are reflected by one polygon mirror.

In this machine, the process speed varies according to the print mode. The rotational speed of the scanner motor and the laser light intensity are switched according to the process speed.

The following is the operational sequence at printing.

- 1) Upon reception of a print command from the main controller, the DC controller rotates the 2 scanner motors.
The 2 polygon mirrors rotate in conjunction with the scanner motors.
- 2) The DC controller allows the laser diode on the laser driver PCB to emit light.
The light of the laser diode (laser beam) is reflected by the polygon mirror and received by the BD sensor on the laser driver PCB.
- 3) The laser driver PCB outputs the /BD input signals (/BD1I, /BD3I) to the DC controller PCB.
- 4) The DC controller monitors the rotational speed of the scanner motor with the /BDI signals input timing to control the scanner motor to rotate at constant speed.
When the scanner motor rotates at constant speed, the DC controller outputs the video signals sent from the main controller to the laser driver PCB.
- 5) In the laser driver PCB, the laser diode is emitted depending on the video signals and the laser beam is radiated.
- 6) The laser beams are reflected by the polygon mirror rotating at the constant speed, and reach the photosensitive drum via the focusing lens and the reflection mirror.
The focusing lens corrects the route of the laser beam to maintain the constant scanning speed on the photosensitive drum.
- 7) When the photosensitive drum rotates at constant speed and the laser beams scan vertically to its rotation, a latent image is formed on the drum.

MEMO:

- Only one /BDI signal is generated per scanner motor.
The /BDI signals of the scanner motor for M/C is generated based on the M laser reflected light, and the /BDI signals of the scanner motor for Y/Bk is generated based on the Y laser reflected light.
The DC controller generates the /BDI signals for four colors according to these /BDI signals and send them to the main controller.
- The machine scans two lines with one polygon mirror. Therefore the scanning direction depends on the color. (The direction for M/Y is right-end write start scanning direction and that for C/Bk is left-end write start scanning direction relative to the print side of paper.)

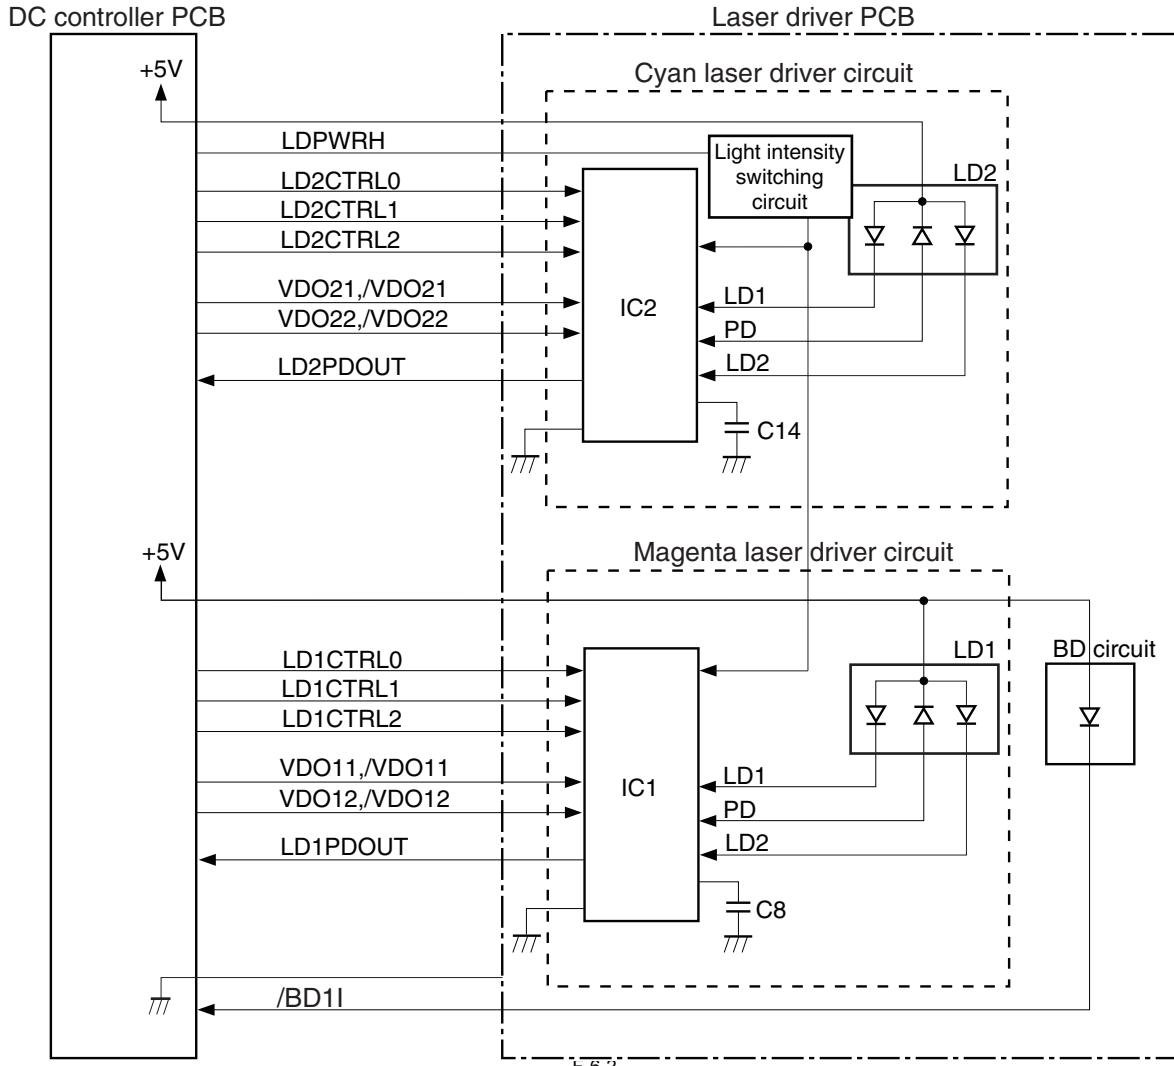

6.2 Controlling the Laser

6.2.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The laser control is to allow the laser driver to turn the laser diode ON/OFF according to the laser control signals sent from the DC controller. There are two laser driver PCBs: one is for M/C and the other is for Y/Bk. The configurations of both PCBs are identical.

In the case of the laser driver for M/C

The DC controller sends the following signals to each laser driver IC (IC1, IC2).

- video signals (VDO, /VDO) for the image formation
- laser control signals (CTRL 0 to 2) for switching the operational mode of the laser driver circuit
- laser light intensity switch signal (LDPWRH) for switching the laser light intensity

The laser driver IC controls the laser according to the combination of the laser control signals.

6.2.2 Laser Light Emission Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In this machine, the laser diode ON/OFF is controlled according to the laser light emission mode.

The laser light emission mode is determined based on the combination of the laser control signals (LD_CTL 0 to 2) that is output by the DC controller. The laser driver IC receives the laser control signals from the DC controller and emits the laser diode according to the laser light emission mode.

6.2.3 Laser Light Intensity Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In this machine, the laser light intensity is switched according to the rotational speed of the scanner motor.

The laser light intensity switch signal (LDPWRH) that is output by the DC controller controls switching the laser light intensity.

The laser driver IC receives the laser light intensity switch signal from the DC controller and switches the laser light intensity.

MEMO:

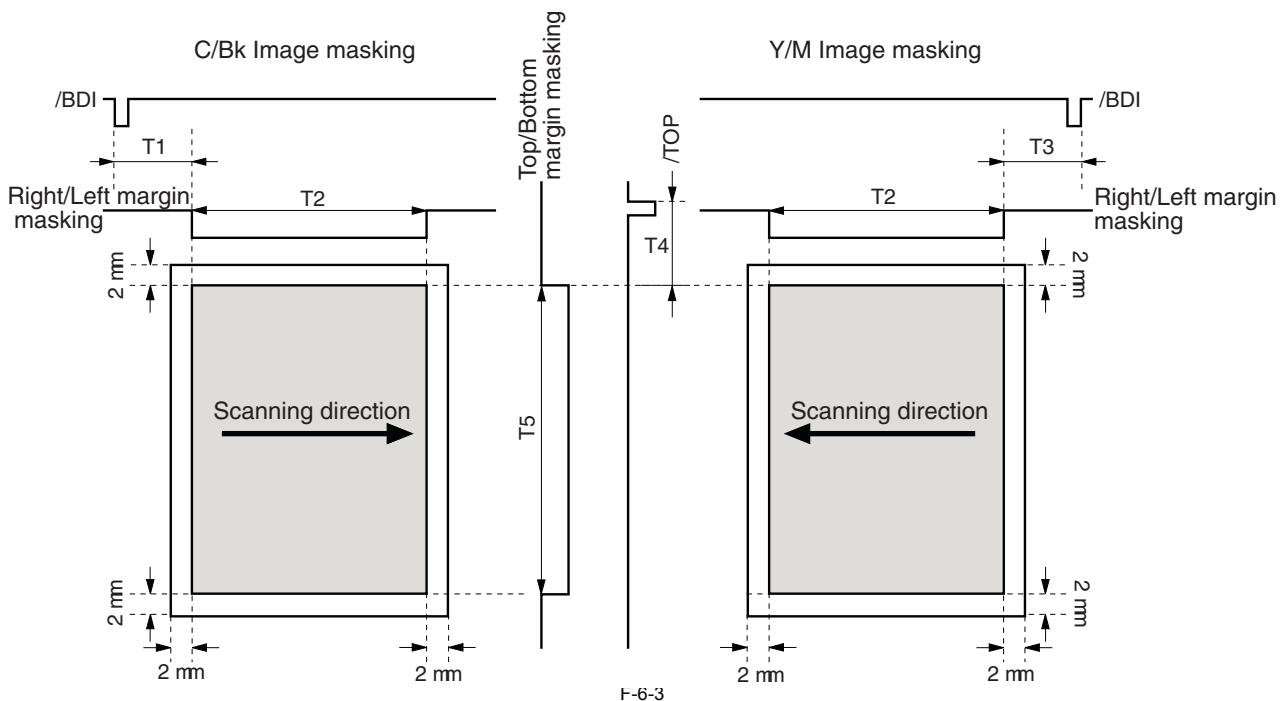

The process speed varies according to the paper type. (See 'Feed Speed Control' in Pickup and Feed System.) When changing the process speed, the rotational speed of the scanner motor needs to be changed. If not switching the laser light intensity, a fault in image density may occur.

6.2.4 Image Masking Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In the DC controller, the image masking control is performed to regulate laser beam emission in non-image area that BD detection is not performed on.

The DC controller puts the laser driver circuit into LD forced OFF mode while the laser beam scans the non-image area that BD detection is not performed on. This is called the image masking status, and the laser diode does not emit light even if the video signals are sent because it is forcedly OFF in LD forced Off mode. The timing to start the image masking control depends on the paper size information that DC controller receives from the main controller. (There is no cassette paper size detection function in this equipment.)

- The colored area indicates the area where an image can be scanned by the laser beam.
- The times T1, T2, T3, T4 and T5 depend on the paper size.
- The T1 time depends on the color.
- If the main controller does not specify the paper size with a paper size command at manual feed pickup operation, the printer cannot detect the paper width. In such a case, the T1 to T3 are automatically set for letter size but T5 is set according to the paper length detected by the manual feed paper sensor (SR707).

6.2.5 Failure Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In the DC controller, the failure in the laser diode is detected.

The laser driver IC converts the laser current of the laser diodes into voltage value (laser current output signal: PDOUT) during the initial APC period and sends it to the DC controller.

If the voltage value equivalent to the laser current output signal is below the specified value, the DC controller presumes the laser diode failure, stops the printer engine, and displays "E100 (optical unit failure)" on the control panel.

6.3 Controlling the Laser Scanner Motor

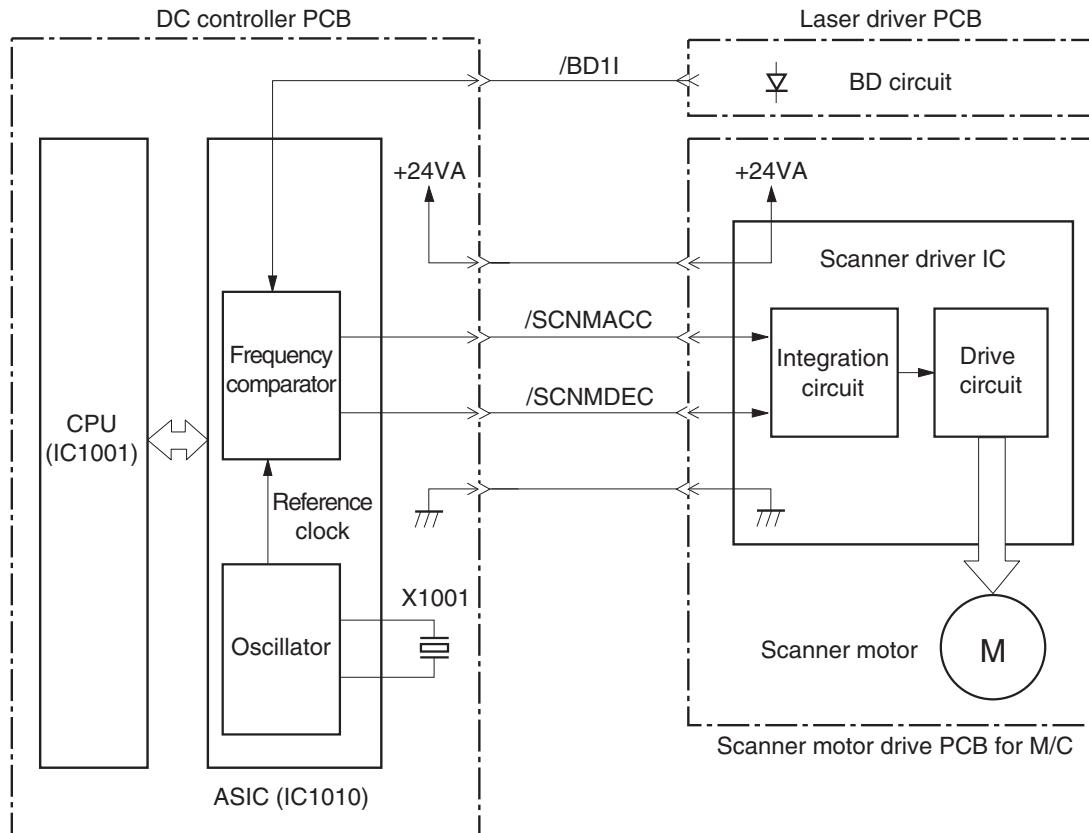

6.3.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In the DC controller, the scanner motor control is performed to emit the laser beam at the correct position on the photosensitive drum. The scanner motor control is to rotate the scanner motor at its specified speed and phase.

- Speed control
The scanner motor is rotated at a specified speed.
- Phase control
The phase difference of the 2 polygon mirrors is adjusted while the scanner motor is rotating at a low speed to eliminate line displacement attributed to the rotation and prevent color displacement in the sub scanning direction.

There are two scanner motors: one is for M/C and the other is for Y/Bk. The configurations of both motors are identical.

F-6-4

The DC controller PCB generates the reference clock based on the oscillation frequency of the oscillator (X1001).

It compares the intervals between the reference clock and the BD input signal (/BD1I) sent from the laser driver PCB with the frequency comparator, and monitors the rotational counter of the scanner motor.

It controls the rotational speed of the scanner motor by sending the scanner motor acceleration signal (/SCNMACC) or the scanner motor deceleration signal (/SCNMDEC) to the scanner motor driver based on the detected rotational speed.

6.3.2 Failure Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In the DC controller, the fault in the scanner motor is detected.

The CPU (IC1001) monitors the frequency comparator in the ASIC (IC1010) and determines whether the scanner motor rotates at its specified rotational speed or not.

When the CPU encounters the following conditions, it determines the scanner motor failure, stops the printer engine, and displays 'E100 (optical unit failure)' on the control panel.

- Abnormal scanner motor
The scanner motor does not enter scanner ready mode within 5 seconds of scanner motor start-up.
- BD error
- The /BDI signal cannot be detected within 1.5 seconds of once the scanner motor reached at its specified rotational speed.
- The interval of the /BDI signal goes out of the tolerance for 0.5 second continuously after the scanner motor once reached at its specified rotational speed.

6.4 Parts Replacement Procedure

6.4.1 Laser/Scanner Unit

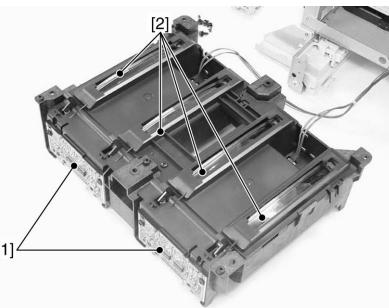

6.4.1.1 Before Removing the Laser Scanner Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 4) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]
- 5) Remove the Electrical Components Cover.[\(page 10-15\)](#)Reference [Removing the Electrical Components Cover]
- 6) Remove the Controller Box.[\(page 10-15\)](#)Reference [Removing the Controller Box]
- 7) Remove the Off Hook PCB. (only of the machine with FAX)[\(page 10-25\)](#)Reference [Removing the Off Hook PCB]
- 8) Remove the DC Controller PCB.[\(page 10-22\)](#)Reference [Removing the DC Controller PCB]
- 9) Remove the Laser Scanner Cover.[\(page 10-16\)](#)Reference [Removing the Laser Scanner Cover]

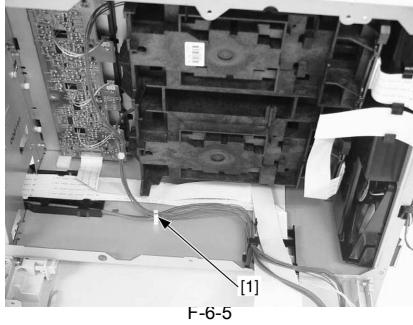

- Do not disassemble the laser scanner unit in the field.
- Disassembling it may cause a functional fault.
- When holding the laser scanner unit, be careful not to touch the laser PCB [1] and the lens [2].

6.4.1.2 Removing the Laser Scanner Unit

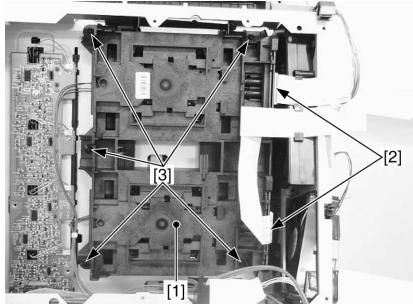

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Free the cable from the wire saddle [1].

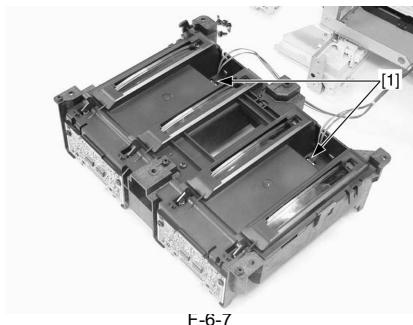

F-6-5

- 2) Remove the laser scanner unit [1].
 - 2 flat cables [2]
 - 5 screws [3]

F-6-6

- 3) Disconnect the 2 connectors [1]

7.1 Overview/Configuration

7.1.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The image formation system forms a toner image on paper, which is controlled by the DC controller. It consists of four toner cartridges and the ETB unit, etc.

The DC controller controls the laser scanner unit, and forms an electrostatic latent image on the photosensitive drum based on the video signal received from the main controller. At the same time, it controls the high-voltage power PCB, makes toner adhere to the electrostatic latent image, and then transfers it on paper.

A memory tag, which saves cartridge data, is built in the toner cartridge for each color. The DC controller detects the use condition of the toner cartridge by reading/writing the memory tag.

7.1.2 Print Process

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The print process is performed in 10 steps with five blocks.

A toner image is formed on paper when the steps in each block are executed in sequence.

1. Electrostatic latent image formation block

To form an electrostatic latent image on the photosensitive drum

Step 1: Pre-exposure

Step 2: Primary charging

Step 3: Laser beam exposure

2. Development block

To make the electrostatic latent image visible on the photosensitive drum surface with the contact development method

Step 4: Development

3. Transfer block

To transfer toner on the photosensitive drum to paper

Step 5: Attraction

Step 6: Transfer

Step 7: Drum separation

Step 8: ETB separation

4. Fixing block

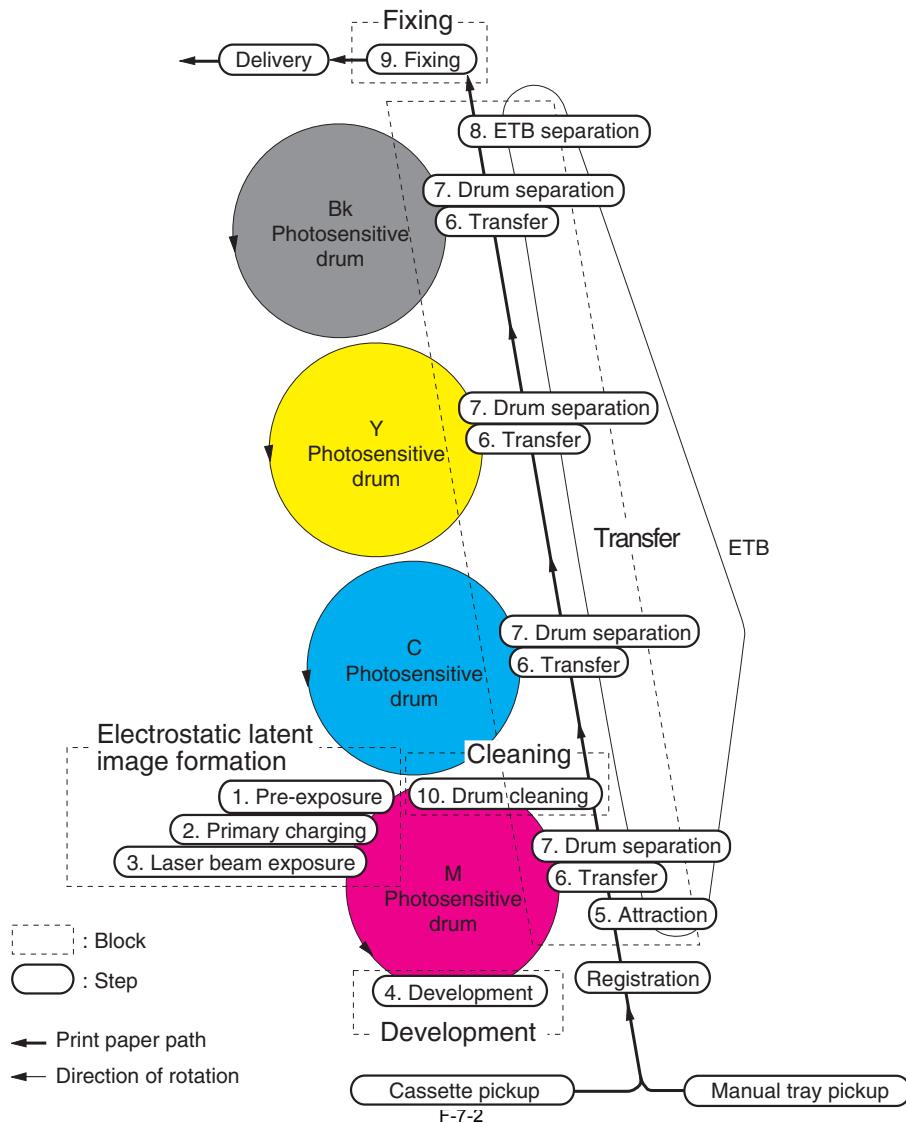

To fix toner on paper

Step 9: Fixing

5. Cleaning block

To remove the residual toner on the photosensitive drum

Step 10: Drum cleaning

7.1.3 Electrostatic Latent Image Formation Block

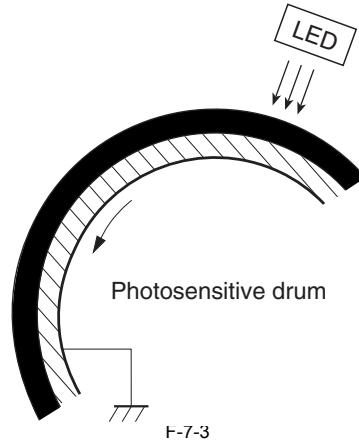

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In this block, an electrostatic latent image is formed on the photosensitive drum by following three steps.

When a laser beam scans the photosensitive drum charged with a negative potential, an image with negative charge is formed on the photosensitive drum. This image is called "an electrostatic latent image" because it is invisible to human eyes.

Step 1: Pre-exposure

As a preparation for the primary charging, the LED light of the pre-exposure LED is exposed on the photosensitive drum surface. This eliminates the residual charge on the drum surface in order to avoid image density unevenness.

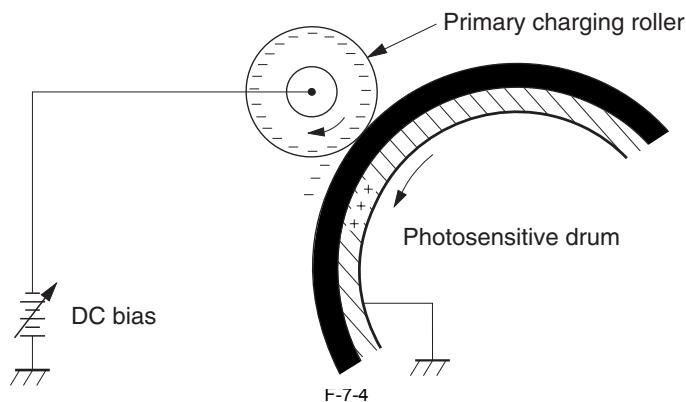

F-7-3

Step 2: Primary charging

As a preparation for the latent image formation, the surface of the photosensitive drum is charged with a uniform negative potential.

The machine charges the photosensitive drum with negative charge directly from the primary charging roller, which is interlocked with the drum. The primary charging roller is made of a conductive rubber, and a negative DC bias is applied to the roller.

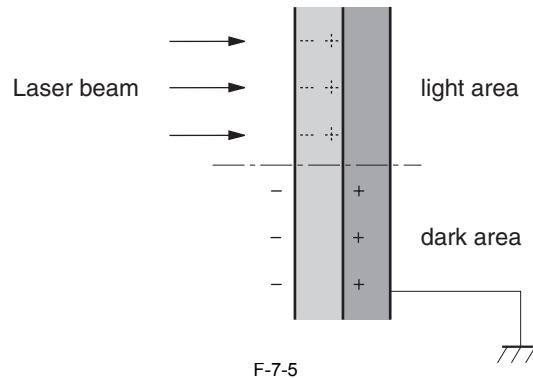

F-7-4

Step 3: Laser beam exposure

The latent image is formed on the photosensitive drum by a laser beam.

When a laser beam is exposed on the photosensitive drum, the potential on the exposed area (light area) is neutralized and the negative potential is removed from the drum surface. This area forms electrostatic latent images. A negative potential remains in the area where a laser beam was not exposed (dark area).

F-7-5

7.1.4 Development Block

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In this block, toner is adhered to the electrostatic latent image on the photosensitive drum to make it visible by the contact development method. In the contact development method, the developing cylinder is closely engaged with the photosensitive drum. Development is performed when toner is transferred from the developing cylinder to the photosensitive drum.

The toner (developer) used in the machine is a non-magnetic single-component toner, composed of resins, etc.

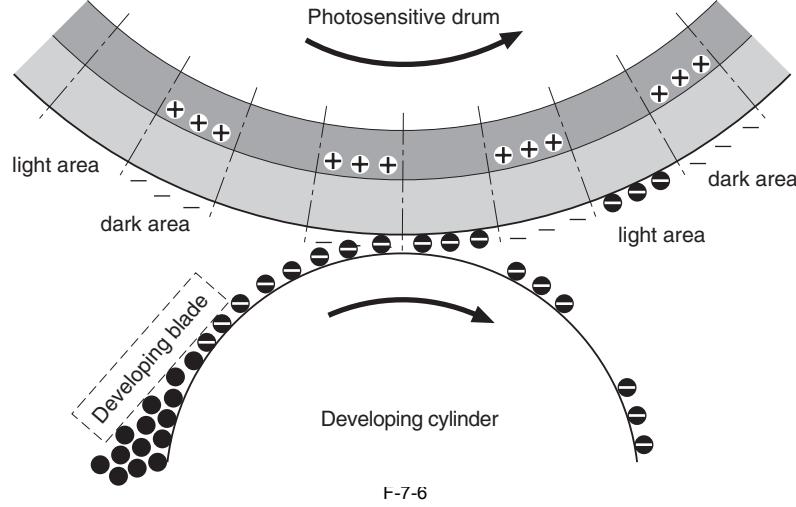

Step 4: Development

On the surface of the developing cylinder, toner is leveled by the developing blade to make an even layer of toner.

In this condition, the toner is charged negative due to the friction between the developing blade and the rotating developing cylinder, and the surface of the developing cylinder is charged negative.

Since the potential on the developing cylinder surface is lower than the light area on the photosensitive drum, the toner is separated from the developing cylinder at the area where the photosensitive drum is engaged with the developing cylinder, and is adhered to the light area of the photosensitive drum. This makes the electrostatic latent image on the photosensitive drum visible.

Since the potential in the dark area on the photosensitive drum is lower than the potential on the developing cylinder surface, the toner is not separated from the developing cylinder.

7.1.5 Transfer Block

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In this block, the toner on the photosensitive drum is transferred to paper, following four steps.

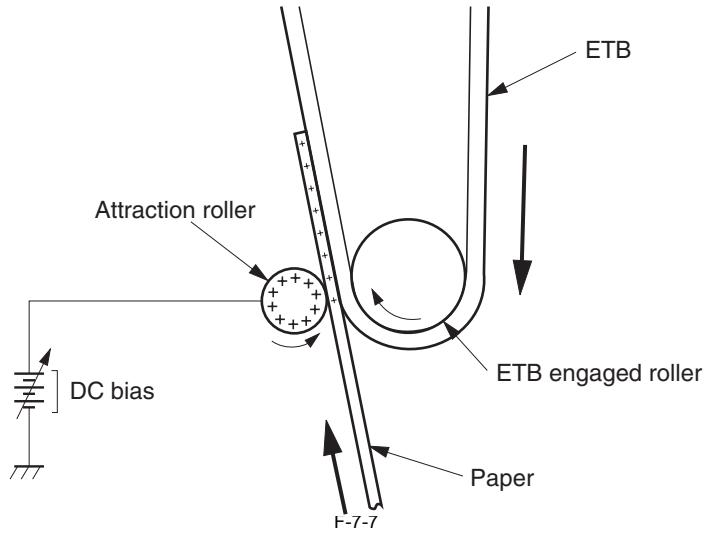

Step 5: Attraction

Paper is adhered to the ETB.

Since the machine transports paper upward, the paper is attracted to the ETB by electrostatic force so that it is not displaced from the feed path.

The fed paper is charged positive by the attraction roller, and is transported while being adhered to the ETB.

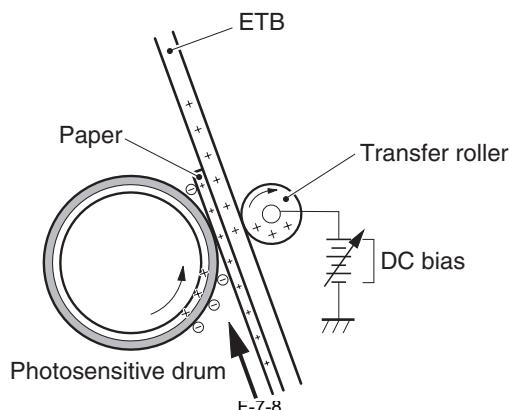

A positive DC bias is applied to the attraction roller.

Step 6: Transfer

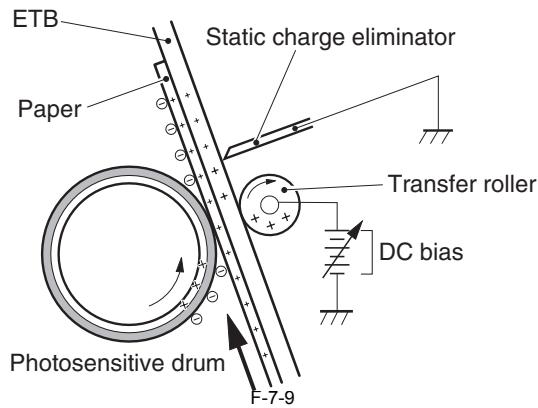

The toner on the photosensitive drum is transferred to paper.

The transfer roller is located at the opposite side of the photosensitive drum across the ETB. A positive DC bias is applied to the transfer roller. Since the ETB is charged positive by the transfer roller, the negative-charged toner on the photosensitive drum is transferred to the paper. This process is executed in the order of M, C, Y, and Bk.

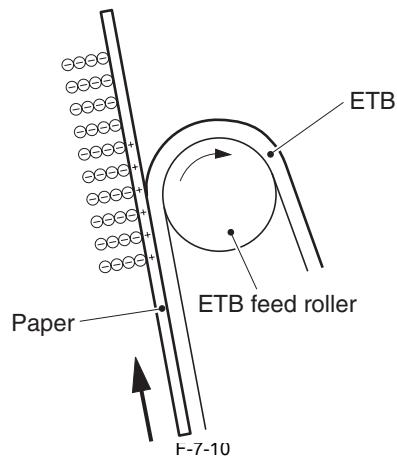

**Step 7: Drum separation**

The paper is separated from the photosensitive drum by its own elastic force (curvature separation).

There is also a static charge eliminator at the downstream of the transfer roller. It decreases the static charge on the ETB to stabilize paper feed operation.

**Step 8: ETB separation**

The paper is separated from the ETB by the elasticity of paper and the curvature of the ETB feed roller.

7.1.6 Fixing Block

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In this block, a toner image is fixed on paper.

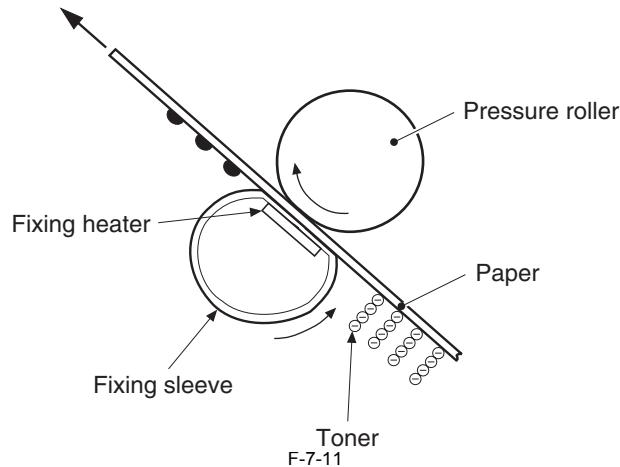

The toner image transferred to the paper can be smeared easily by hands since it is only attracted to the paper by a static electricity.

When pressure and heat are applied to the paper and toner image, the toner image melts with mixed colors and becomes a permanent printed image (on-demand fixing).

Step 9: Fixing

When the paper with toner is transported between the fixing sleeve and the pressure roller, the toner is melted by heat and fixed to the paper by pressure.

For the fixing heater, the machine uses a ceramic heater with lower heat, which warms up quickly. The feature of this heater is that the wait time is short and thus energy saving is realized.

7.1.7 Cleaning Block

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

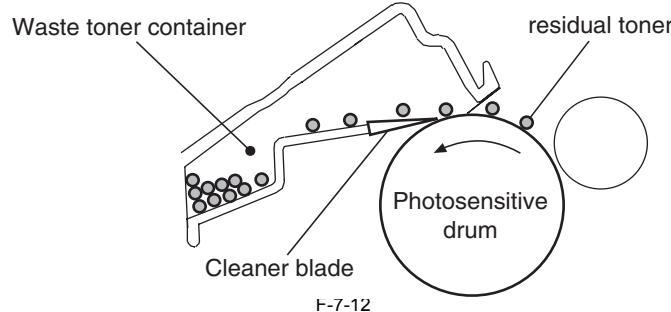

In this block, the residual toner on the photosensitive drum is removed.

When transfer is performed, a part of the toner image on the photosensitive drum is not sometimes transferred and remains on the drum. This remaining toner is called residual toner.

Removing the residual toner keeps a clear image in the subsequent print operation.

Step 10: Drum cleaning

The residual toner on the photosensitive drum is scraped by the cleaner blade, and then collected into the waste toner container.

7.2 Image Stabilization Control

7.2.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The quality of a printed image is affected by changes in environmental condition where the machine is installed or changes in the characteristics of the photosensitive drum and toner.

The machine performs the following controls according to necessity to stabilize print operation.

- Environmental change corrective control
To correct values of primary charging biases and developing biases based on the result of detection performed by the environment sensor. This is comparable to a conventional D-max control.
- D-half control
To correct the gradation data in the main controller PCB based on the result of detection performed by the color displacement/density sensor
- Color displacement corrective control
To correct the timing of sending a video signal based on the result of detection performed by the color displacement/density sensor.
- Auto gradation correction control
To make a stable gradation density feature of image, customers need to execute any of full correction, quick correction or copy image correction.

Timing of execution of each control

T-7-1

No.	Execution timing	Operation time	Environmental change corrective control	D-half control	Color displacement corrective control	Remarks
1	Replacement of the cartridge	Approx. 3 min	Yes	Yes	Yes	Executed at the time of multiple initial rotations after power-on or door closing
2	Environmental change	Approx. 2.5 min	Yes	Yes	-	Temperature and humidity by the environment sensor
3	After a specified period of time is passed	Approx. 2.5 min	Yes	Yes	-	Executed 8 hours after the drum motor stops. The control is not however executed during sleep mode.
4	Recovery from sleep mode	Approx. 2.5 min	Yes	Yes	-	Executed 8 hours after the drum motor stops.
5	After a specified number of sheets is printed	Approx. 3 min	Yes *	Yes *	Yes (Every 1000 prints)	Executed after a job is completed.
6	Full correction (PASCAL)	Approx. 5 min	Yes	Yes	-	Executed by user's operation.
7	Quick correction	Approx. 2.5 min	Yes	Yes	-	Executed by user's operation.
8	Copy image correction	Approx. 4 min	Yes	Yes	-	Executed by user's operation.

*: Executed when 120 sheets are printed after the initial implementation
Executed when 500 sheets are printed after the 2nd implementation
Executed when 1000 sheets are printed after the 3rd implementation
Executed when 1000 sheets are printed thereafter

7.2.2 Environmental Change Corrective Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

This control corrects values of primary charging biases and developing biases to obtain an optimum image under the detected environmental condition.

Explanation of operation

The environment sensor sends detected temperature and humidity to the DC controller as a temperature signal and a humidity signal.

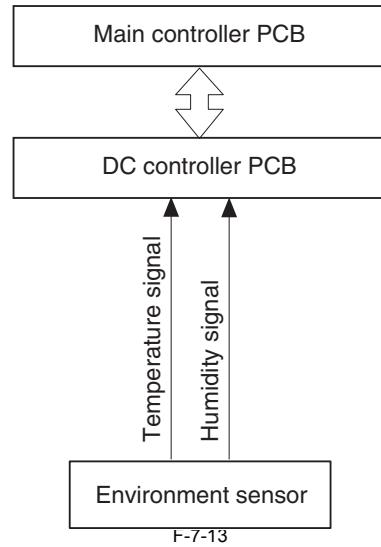

The DC controller detects the printer's installation environment based on these two signals.

The DC controller requests the main controller to send a command to execute environment related corrective control at the following timing.

- After power-on
- When the front cover is closed after the replacement of the toner cartridge
- When a specified period of time elapses after the execution of this control
- When a specified number of prints are completed after the execution of the previous job or after the replacement of the toner cartridge
- When a specified level of environmental change (temperature/humidity) has been made after the execution of this control
- When the DC controller received the execution command from the main controller

The DC controller executes the following measures to prevent an image failure after the execution of this control.

- Change the primary charging bias value.
- Change the developing bias.
- Request the main controller to execute image gradation collective control.

Error Codes:

E066 Environment sensor error alert

If the temperature detected by the environment sensor is out of the specified range, the host machine is stopped and an error code will be displayed.

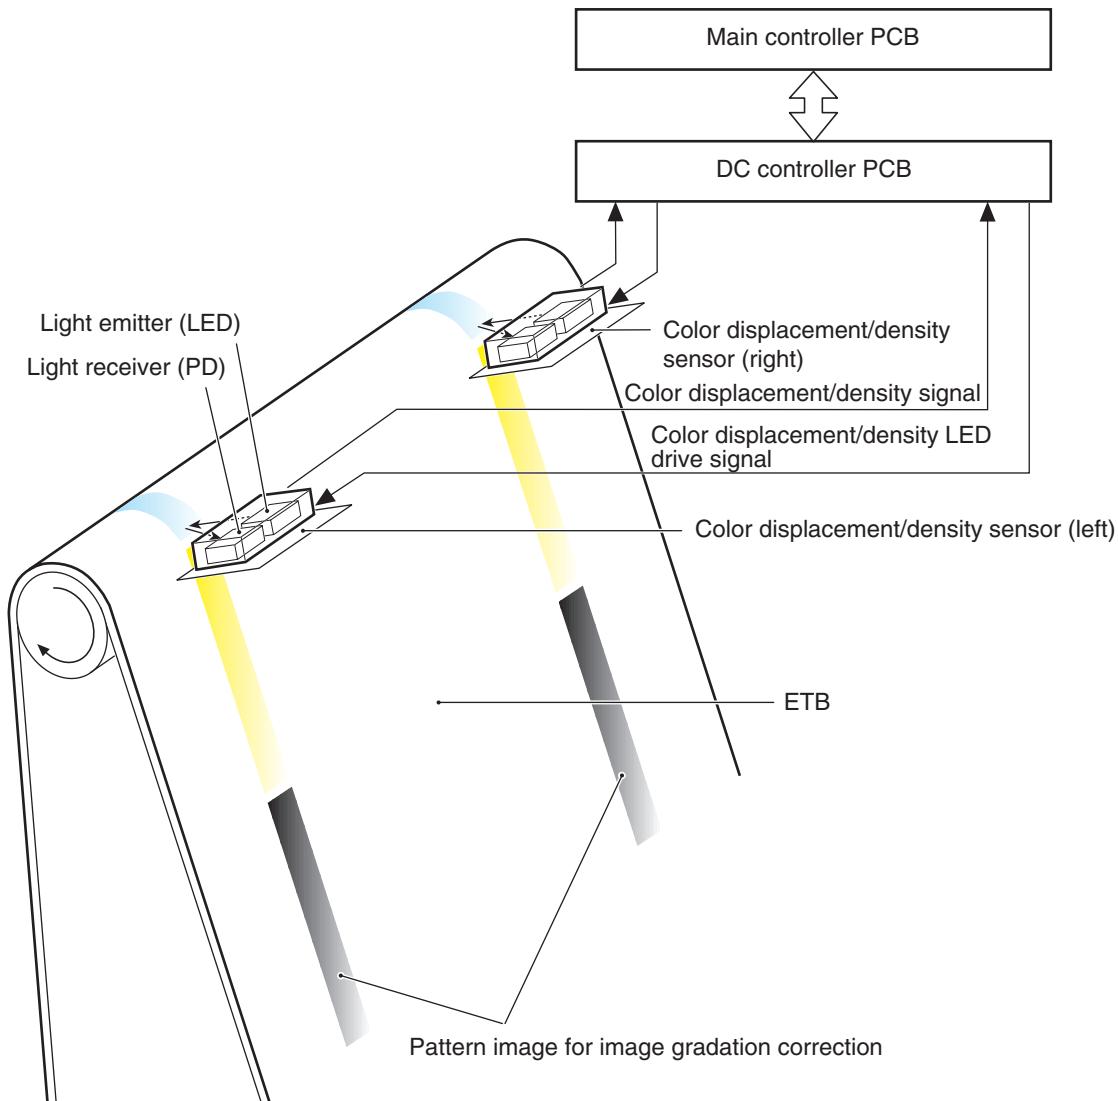

7.2.3 D-half Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

This control corrects the gradation data based on the halftone density in order to obtain ideal image gradation. The DC controller executes this control following the command sent from the main controller.

Explanation of operation

- 1) When receiving a command of executing density measurement from the main controller, the DC controller forms a pattern image for image gradation correction for each color on the ETB.
The pattern image for image gradation correction is formed with the specified density for each color (low at the left side and high at the right side), using the optimum developing bias determined by the environment related corrective control.
- 2) The DC controller sends a color displacement/density LED drive signal and flashes the light emitter (LED) of the color displacement/density sensor.
The color displacement/density sensor is a reflection type sensor located on the upper side of the ETB. It consists of the light emitter (LED) and light receiver (PD).
- 3) The light emitted from the light emitter is reflected at the pattern image for image gradation correction and received at the light receiver of the color displacement/density sensor.
The intensity of the reflected light varies depending on the toner density.
- 4) The color displacement/density sensor converts the received light into a voltage, and sends it to the DC controller as a density detection signal (analog value).
- 5) The DC controller converts the received density detection signal into density data, and sends it to the main controller.
- 6) The main controller performs gradation correction based on the received density data in order to obtain an ideal halftone image.

H-7-14

Error Codes:

E020	Warning: color displacement/density sensor abnormality When light could not be received by the light receiver, the machine sets an initial value for the image density correction value and displays the error code on the control panel.
------	--

A pattern image for image gradation correction

Image gradation correction pattern is formed on the position away from ETB center to right and left in the following order.

ETB 1st round

- 1) Pattern image for adjustment of LED light intensity

Y, C, M pattern is printed on the left side only.

This pattern is to adjust the light intensity of the LED for the color displacement/image density sensor (left).

- 2) Pattern for timing reference

Bk pattern is printed on the same position at right and left.

This pattern is to measure the timing of step 3), 4) and 5).

- 3) ETB base

The machine measures the ETB base condition of the same position with the halftone patch that is measured at the 2nd round of ETB.

This is to measure the density of halftone patch accurately. The timing is determined with using the pattern printed at step 2).

ETB 2nd round

- 4) Pattern for density condition

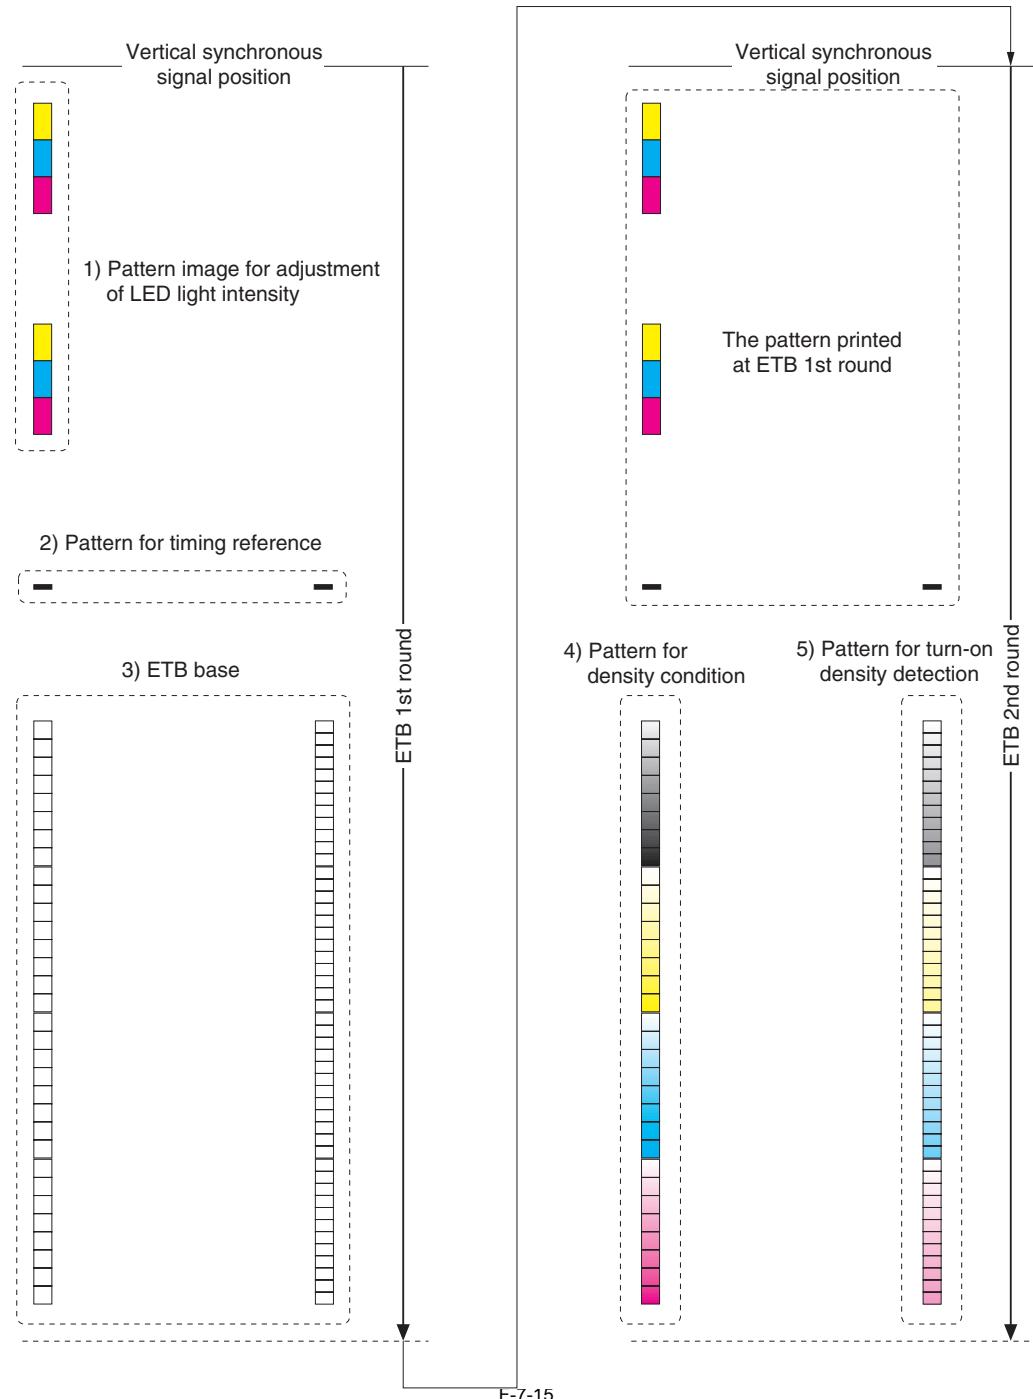

Halftone patch of Bk, Y, C, M is printed on the left side only.

Measures the density condition of each color. The timing is determined with using the pattern printed at step 2).

- 5) Pattern for turn-on density detection

Halftone patch of Bk, Y, C, M is printed on the right side only.

This is to detect the turn-on density of each color (the printable minimum density). The timing is determined with using the pattern printed at step 2).

7.2.4 Color Displacement Corrective Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

This control corrects color displacement which occurs due to individual difference of the laser scanner unit and toner cartridge. Since this machine uses a different toner cartridge for each color, a difference may occur in the position or the size of an image depending on the color. The machine performs correction by calculating the degree of color displacement based on the position of the pattern image for color displacement correction formed on the ETB and controlling a video signal for each color.

The DC controller executes this control according to the command sent from the main controller. Corrective control is performed for the following three points.

- Main scanning start position
- Main scanning magnification *
- Sub scanning start position

* This is an image size ratio in the main scanning direction. Since there is individual difference in the toner cartridge for each color, the position of the photosensitive drum and the laser optical path length vary depending on the color. Since the range of an image in the scanning direction also varies depending on the color, color displacement occurs at the edge of an image.

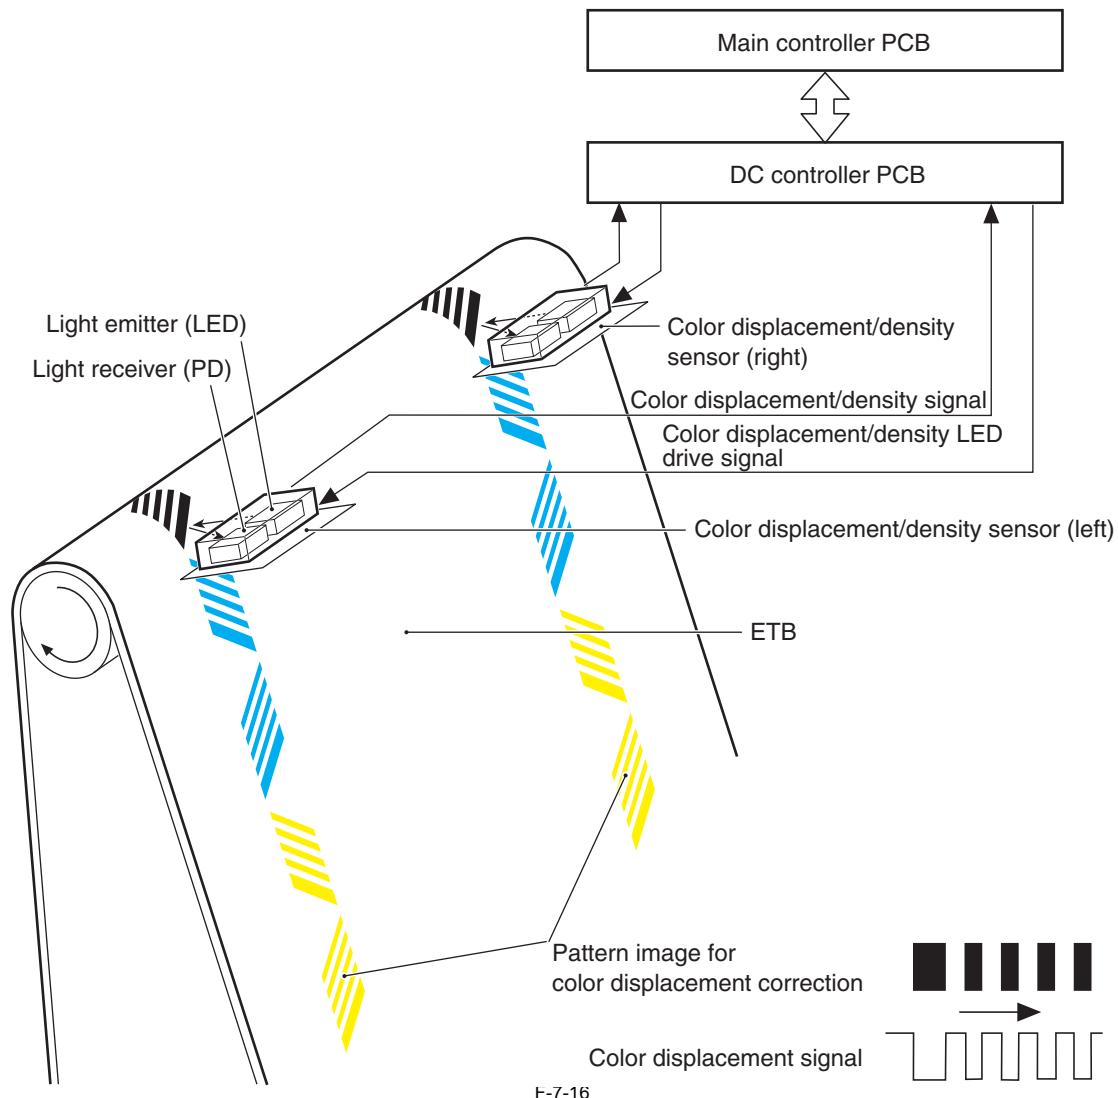

The color displacement corrective control is executed at the following timing.

- At power-on after the replacement of the toner cartridge
- When the front cover is closed after the replacement of the toner cartridge
- When a specified number of prints are completed
- When the execution command is received from the main controller

Explanation of operation

- 1) The DC controller forms a pair of pattern images for color displacement correction (one is on the left side and the other is on the right side) with four colors on the ETB.
- 2) The DC controller sends a color displacement/density LED drive signal so that the light emitter (LED) of the color displacement/density sensor emits light. The color displacement/density sensor is a reflection type sensor located on the upper side of the ETB. It consists of the light emitter (LED) and light receiver (PD).
- 3) The light emitted from the emitter is reflected at the ETB and received by the light receiver of the color displacement/density sensor. The intensity of this reflected light varies depending on whether toner exists or not.
- 4) The color displacement/density sensor converts the received light into a voltage, and sends it to the DC controller as a color displacement detection signal.
- 5) The DC controller determines the position of the pattern image based on the timing when the color displacement detection signal changes, and calculates the degree of color displacement for each color based on the position.
- 6) The degree of color displacement calculated for each color is sent to the main controller.

- 7) The main controller controls a video signal for each color based on the degree of color displacement of each color received, and makes adjustments of the main scanning start position, main scanning magnification, and sub scanning start position.

Error Codes:

E020 Warning: color displacement/density sensor abnormality

When light could not be received by the light receiver, the machine sets an initial value for the color displacement corrective value, and displays the error code on the control panel.

Pattern image for color displacement correction

The pattern images are formed on both sides of the ETB certain distance away from the center in the following order.

1) Pattern image for adjustment of LED light intensity

Printed in order of yellow (Y), cyan (C), black (Bk), and magenta (M).

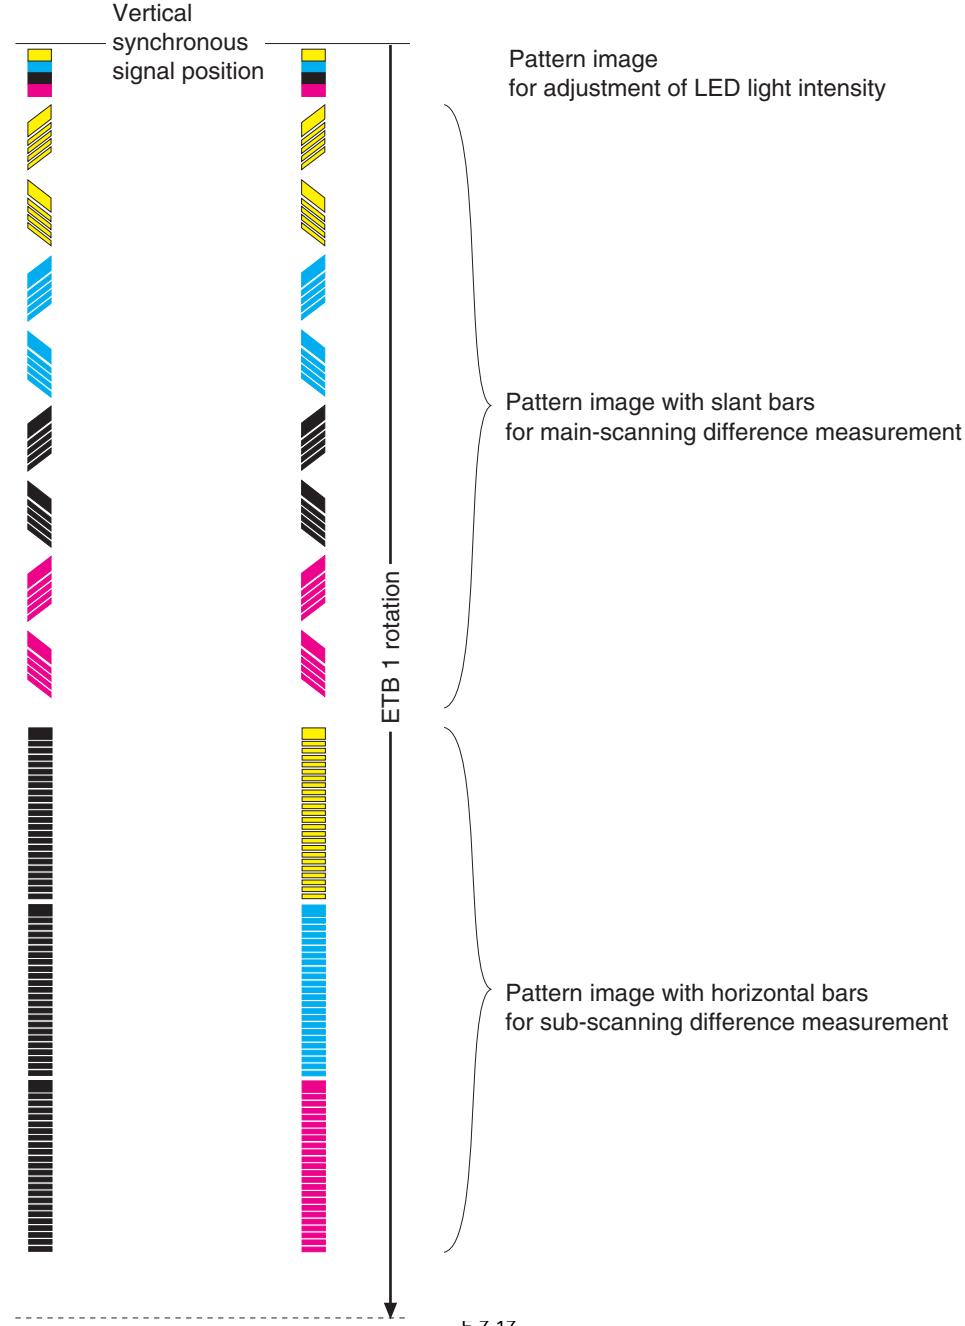

2) Pattern image with slant bars for main-scanning difference measurement

Printed in order of yellow (Y), cyan (C), black (Bk), and magenta (M).

3) Pattern image with horizontal bars for sub-scanning difference measurement

Printed in black (Bk) only on the left side, and in order of yellow (Y), cyan (C), and magenta (M) on the right side.

This is for the comparison of each color registration based on the black position.

7.2.5 Auto Gradation Correction Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Overview

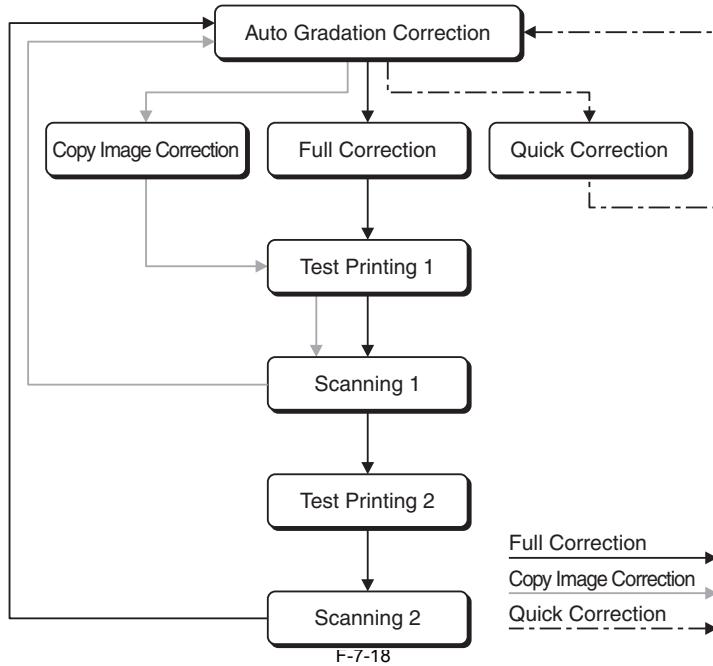

Auto gradation correction control is to stabilize the gradation density features of image.
To execute, select [Adjustment/Cleaning > Auto Gradation Correction] in additional function mode.
It has the following 3 correction controls.

T-7-2

Item	Description	Number of test pattern sheet	Type of test pattern
Full Correction (PASCAL)	This correction outputs a test pattern and the reader scans its gradation density to adjust the gradation.	2	1st sheet: T-MIC 2nd sheet: high/low screen rulings
Quick Correction	This correction adjusts the gradation by means of D-half control instead of outputting a test pattern.	-	-
Copy Image Correction	This correction outputs a test pattern and the reader scans its gradation to mainly adjust the gradation of copy image.	1	T-MIC

Operation flow

Following flow shows the operation of correction control when any of full correction, quick correction or copy image correction is selected from the auto gradation correction.

F-7-18

7.3 Toner Cartridge

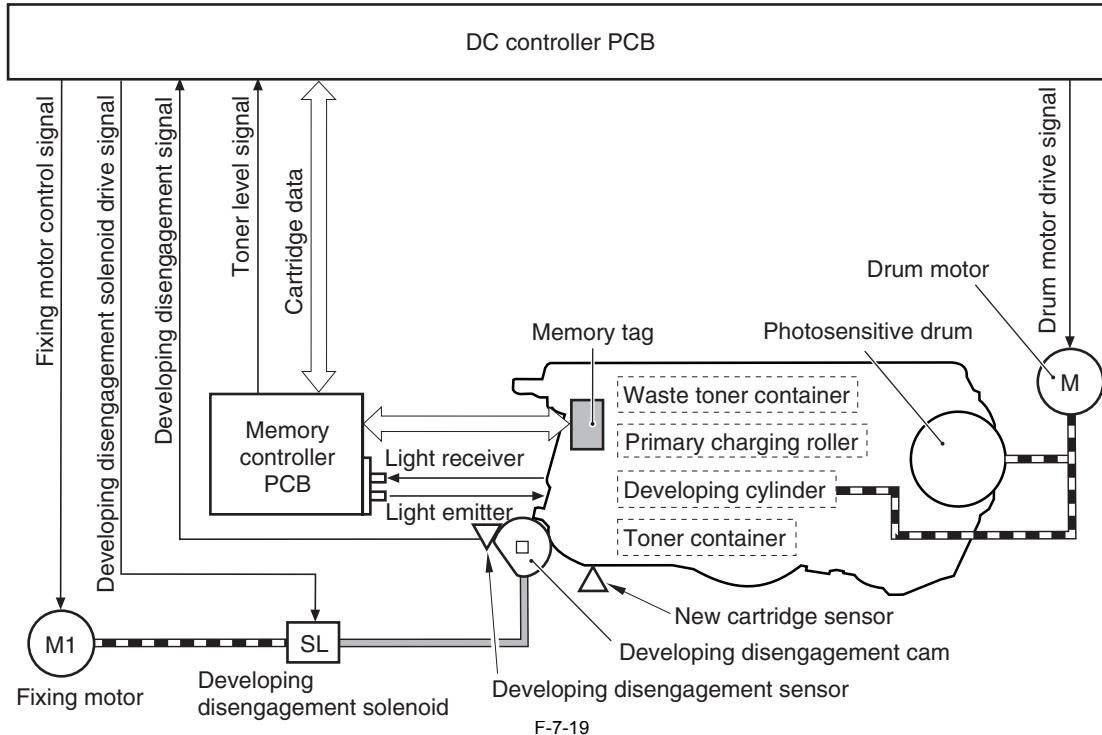

7.3.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The toner cartridge enables to form a toner image on the photosensitive drum.

It consists of the photosensitive drum, primary charging roller, and developing cylinder, etc.

There are four kinds of print cartridges: Magenta, Cyan, Yellow, and Black, having nearly identical structure.

F-7-19

The toner cartridge executes the following four controls.

- Memory tag control
- Toner cartridge detection
- New toner cartridge detection
- Developing cylinder engagement/disengagement control

7.3.2 Toner Level Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine uses a transparent toner level detection method.

With this method, light goes through the toner cartridge while the toner is stirred driven by the drum motor.

The DC controller detects the toner level by monitoring how long it takes for the light to go through the cartridge.

Explanation of operation

The DC controller illuminates the LED on the memory controller PCB.

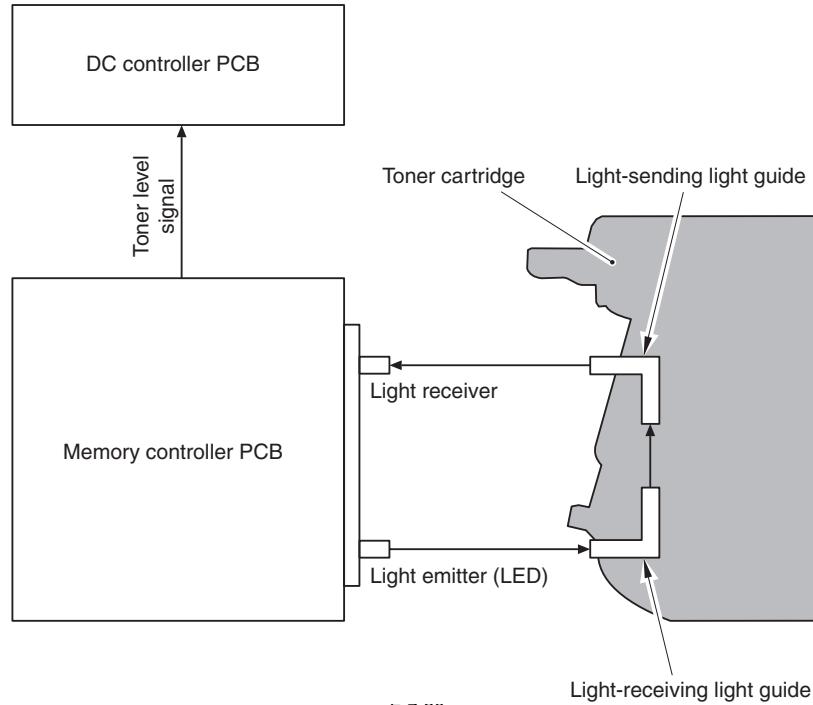

The light emitted from the LED enters into the toner cartridge via the light-receiving light guide.

Since the stirred toner blocks the light, how long it takes for the light to go through the cartridge differs depending on the toner volume.

The light that went through the toner cartridge goes out from the light-sending light guide and is received at the memory controller PCB.

The toner level is detected based on the length of the time it took for the main controller to receive the light. The higher the toner level is, the shorter time is taken to receive light. On the other hand, the lower the toner level is, the longer time is taken.

When the light-receiving time becomes longer than the specified value, the DC controller judges that the toner level is low and displays "Toner level is low" in the control panel.

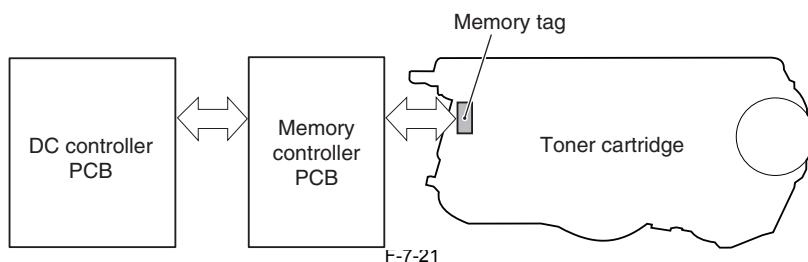

7.3.3 Memory Tag Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The DC controller detects the use condition of the toner cartridge by reading/writing data saved in the memory tag.

When the machine is placed in the following condition, the DC controller determines that it is a communication error of the memory tag and notifies the main controller of "Warning: cartridge memory abnormality".

- Access abnormality: When reading/writing failed
- Data abnormality: When a fault was found in the data which was read/written

7.3.4 Toner Cartridge Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The time required until the rotating drum motor stops varies depending on the presence/absence of the toner cartridge. When the toner cartridge is present, the load applied to the drum motor increases, which shortens the stop time.

The DC controller detects the presence/absence of the toner cartridge based on the stop time of the drum motors (M6 to 9) after the initial drive of the drum motors when the power is turned ON or the front cover is closed.

When it is determined that the toner cartridge is absent, the DC controller stops the machine's operation and displays "No toner cartridge" on the control panel.

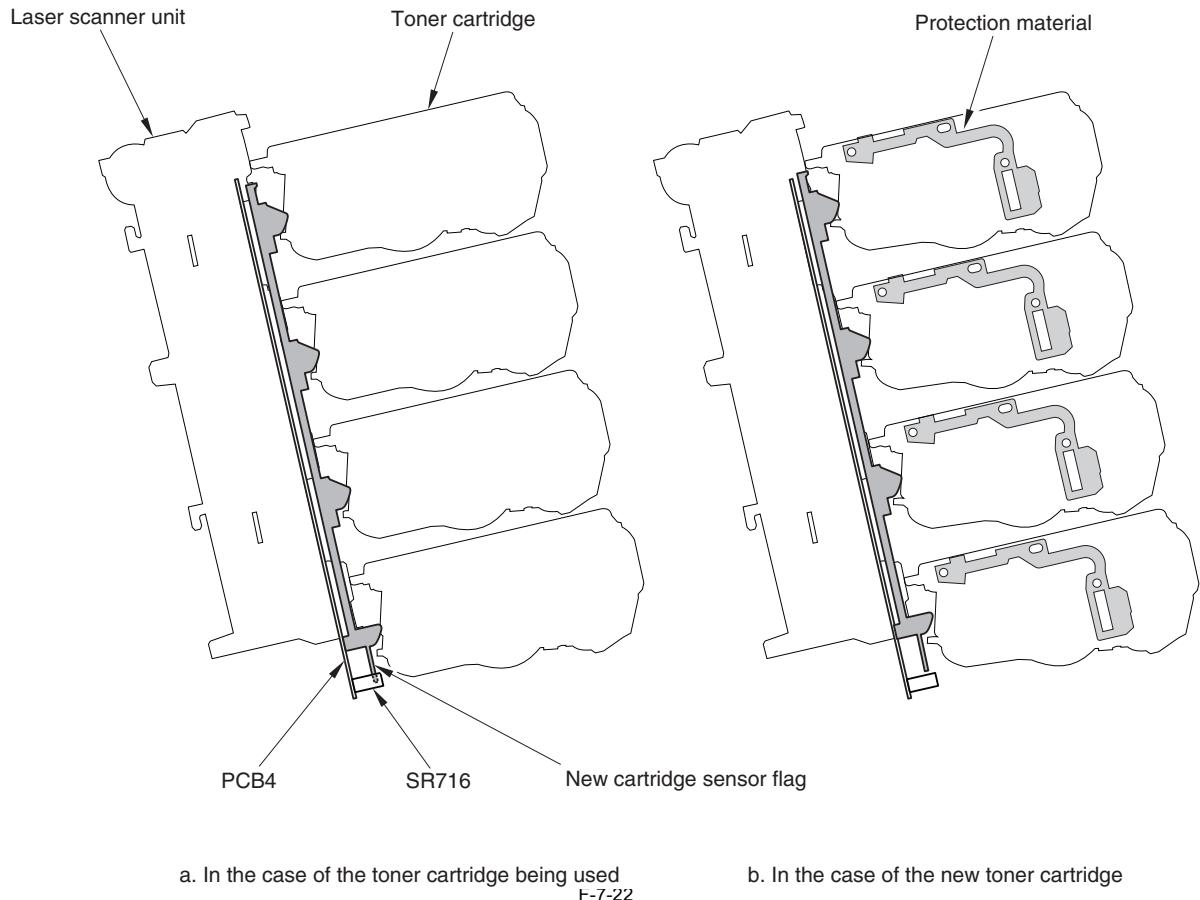

7.3.5 New Toner Cartridge Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

It is detected whether the protection material has been removed from the new cartridge.

At the time of shipment, a toner cartridge with a protection material (sealing tape) has been inserted into the machine. This protection material needs to be removed when the machine is installed.

When the power is turned ON without removing the protection material, the new cartridge sensor flag is pressed by the protection material, so a new cartridge sensor (SR716) detects the presence of the protection material. In this condition, the machine determines that the protection material is not removed from the toner cartridge, stops the operation, and then displays a message prompting an operator to remove the protection material.

a. In the case of the toner cartridge being used
F-7-22

b. In the case of the new toner cartridge

7.3.6 Developing Cylinder Engagement/disengagement Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In the machine, the developing cylinder is engaged with or disengaged from the photosensitive drum as necessary for the following purposes.

- To reduce the color photosensitive drum consumption at the time of monochrome printing
- To prevent lines of the photosensitive drum due to engagement with the developing cylinder
- To prevent toner transfer when printing is not performed

MEMO:

The machine uses a contact development method, in which the developing cylinder is engaged with the photosensitive drum.

- At color printing, developing cylinders of all colors are engaged with the photosensitive drum, but, at monochrome printing, only the black-color developing cylinder is engaged with it. By disengaging developing cylinders of colors other than black from the drum, the machine reduces the color photosensitive drum consumption at monochrome printing.
- When the machine stops for a long period of time, lines occur in the area where the developing cylinder and the photosensitive drum come into contact. To prevent this symptom, the developing cylinder is disengaged from the photosensitive drum.
- When printing is not performed, the toner on the developing cylinder adheres to the photosensitive drum. To prevent this symptom, the developing cylinder is disengaged from the photosensitive drum.
- This control works with the transfer roller engagement/disengagement operation. For details, refer to "Transfer Roller Engagement/disengagement Control".

The developing cylinder engagement/disengagement control is executed at the following timing.

- Multiple initial rotations at power-on
- Image stabilization control
- Printing operation

The status of engagement/disengagement during printing operation differs depending on the printing mode (monochrome or color mode).

T-7-3

Color mode		Developing cylinder	Drum motor drive
Color printing		All color cylinders are engaged.	All color motors are driven.
Monochrome printing	Plain paper, Transparency	Only the black color cylinder is engaged.	Only the black color motor is driven.
	Others*		All color motors are driven.
Power-off/standby		All color cylinders are disengaged.	Stopped

*: Thick paper, envelope, rough paper, small-size paper, thin paper (H/H environment), thin paper (when thin paper/rough paper is specified in the special control mode)

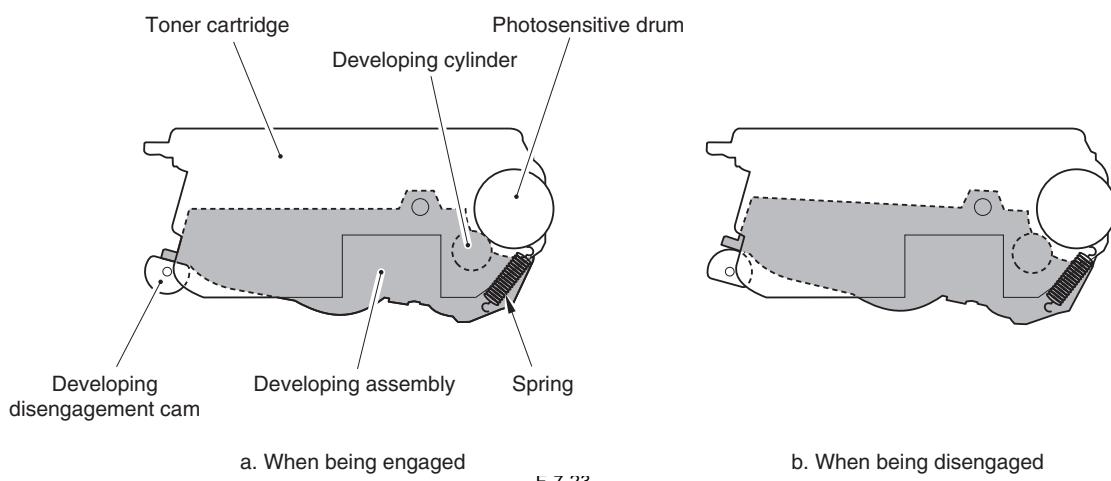

Explanation of operation

The toner cartridge consists of the upper part where the photosensitive drum is attached and the lower part where the developing cylinder is attached (developing assembly).

When the developing disengagement solenoid (Bk: SL5015, YMC: SL5014) is turned OFF, the developing disengagement cam moves up the rear side of the developing assembly, so the developing cylinder is disengaged from the photosensitive drum with the principle of leverage.

When the DC controller turns ON the developing disengagement solenoid, the drive of the fixing motor (M1) is sent to the developing disengagement cam, causing the cam to rotate. When the radius of the developing disengagement cam becomes shorter than the distance between the cam and the developing assembly, the developing cylinder is engaged with the photosensitive drum by the power of a spring.

The engagement/disengagement condition is detected by the developing disengagement sensor (Bk: SR711, YMC: SR712) based on the direction of the developing disengagement cam.

a. When being engaged

F-7-23

b. When being disengaged

Error Codes:

E015 Developing disengagement abnormality

When the machine is placed in the following condition, it stops operation and displays the error code on the control panel.

- The direction of the developing disengagement cam does not change from the home position after a specified period of time when the developing cylinder is disengaged from the drum.
- The direction of the developing disengagement cam does not return to the home position after a specified period of time when the developing cylinder is engaged with the drum.

7.4 Transfer Unit

7.4.1 ETB Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The ETB unit transfers toner into paper while feeding the paper.

The ETB unit consists of the ETB, ETB tension roller, ETB feed roller, ETB slave roller, attraction roller, and transfer roller.

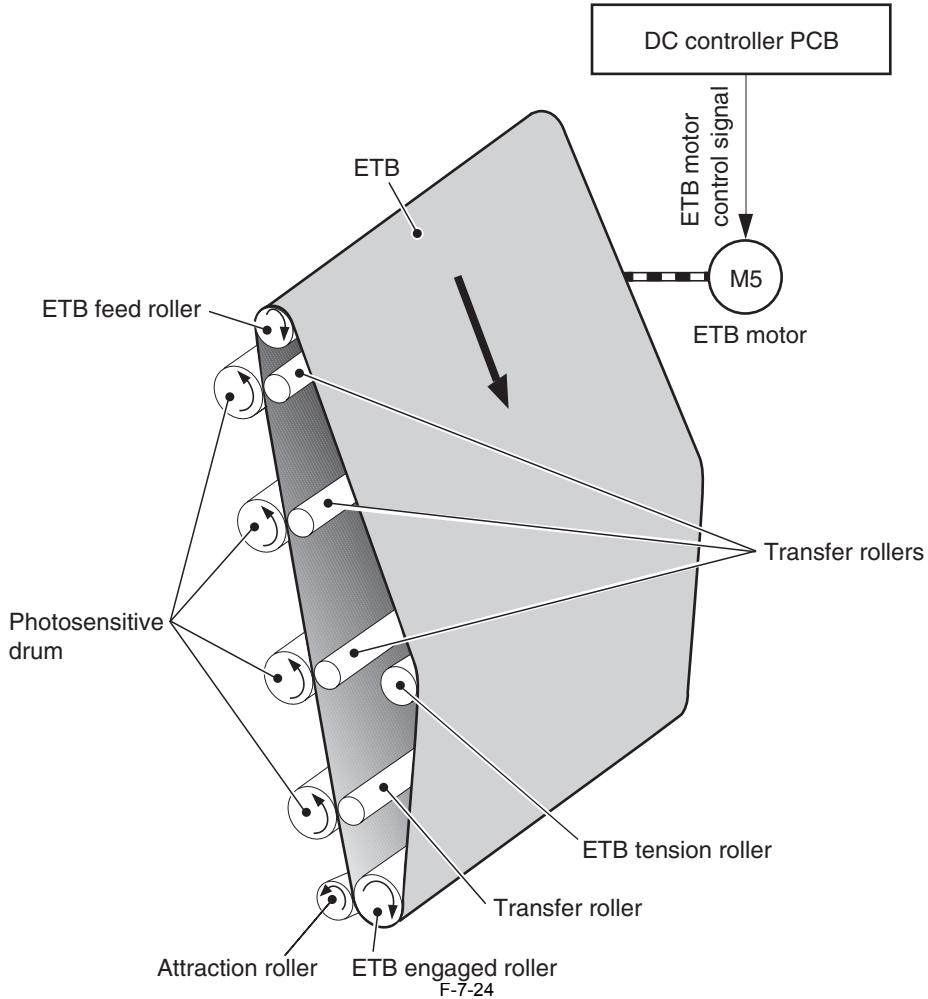

The ETB motor (M5) rotates the ETB feed roller, and this drive rotates the ETB. All of other rollers are driven by the ETB.

At the time of printing, the fed paper is attracted to the ETB by the attraction roller, and transported according to the rotation of the ETB. During transportation, toner is transferred by the photosensitive drum and transfer roller of each color. After the toner is transferred, the paper is separated from the ETB by the ETB feed roller.

Especially at the time of color printing, high accuracy is requested for paper feeding by the ETB because one image is formed with four color toners overlapped. The ETB is also used for image stabilization control. When image gradation corrective control or color displacement corrective control is executed, the pattern image for color displacement or image gradation correction is written on the ETB.

The ETB unit executes the following three major controls.

- Automatic bias control
- ETB cleaning
- Transfer roller engagement/disengagement control

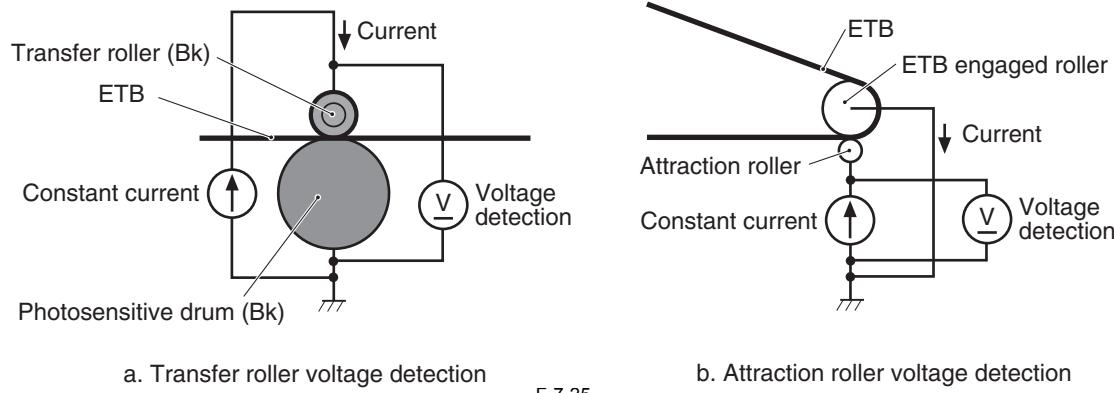

F-7-24

7.4.2 Automatic Bias Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Depending on the individual difference or deterioration condition of the transfer roller, attraction roller, and ETB, differences and changes occur in the resistance value of each unit. In this condition, a transfer failure may occur when an expected level of bias is not applied to each roller. This control is executed to apply the optimum level of bias to each roller based on the measured voltage of each roller.

The DC controller sends a constant current to the transfer roller (Bk) and attraction roller when starting print operation and measures the voltage at that point. Based on the measured voltage, it extracts the optimum transfer and attraction biases. In the subsequent print operation, the optimum transfer and attraction biases are applied to stabilize the image quality.

a. Transfer roller voltage detection

b. Attraction roller voltage detection

F-7-25

7.4.3 ETB Cleaning

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The ETB is used not only to transfer the toner on the photosensitive drum to the paper but also to write a pattern image for correction for image stabilization control. If the toner which is not transferred to the paper remains on the ETB, it causes stain on the back of paper. In this control, the ETB surface is cleaned by placing the residual toner on the ETB back to the photosensitive drum electrostatically.

The ETB cleaning is executed by the DC controller at the following timing.

- At power-on
- Before and after the execution of color displacement corrective control
- Before and after the execution of image gradation corrective control
- When the front cover is closed
- After printing is performed when the universal-size paper is specified

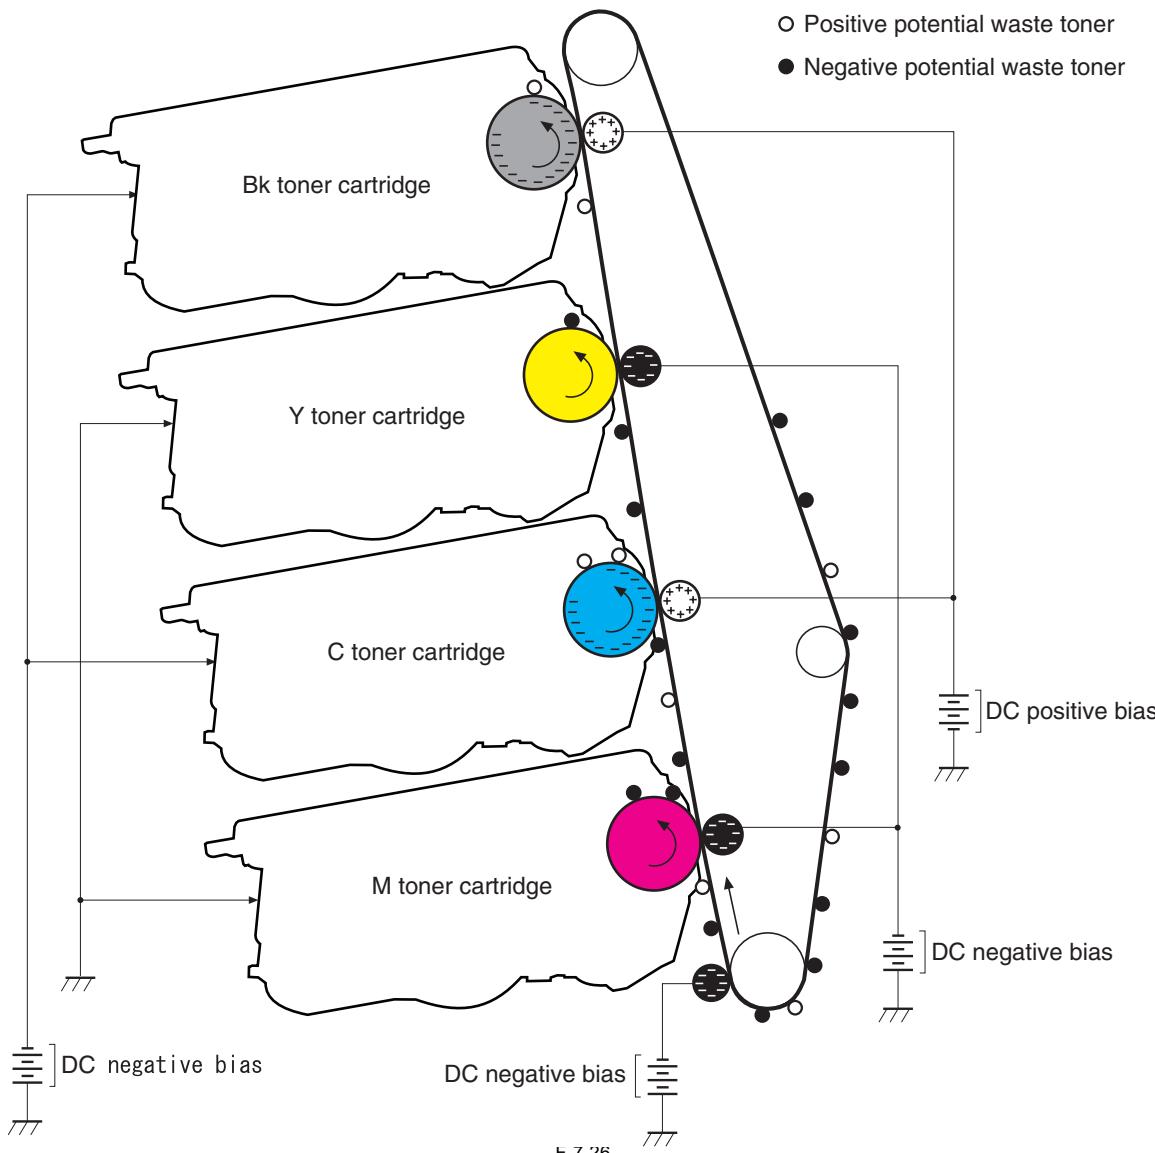

Negative charged toner and positive charged toner remain on the ETB.

When ETB cleaning starts, the DC controller sets the potential of the photosensitive drums for magenta (M) and yellow (Y) to 0, using the bias of the primary charging roller. The photosensitive drums for cyan (C) and black (Bk) are changed negative.

For the transfer roller for each color, a positive or negative DC bias is applied as shown in the figure below.

Since potential difference occurs between each photosensitive drum and ETB, the residual toner is reverse-transferred to the photosensitive drum. The negative charged toner is adhered to the photosensitive drums for magenta (M) and yellow (Y), and the positive charged toner is adhered to the photosensitive drums for cyan (C) and black (Bk).

The toner adhered to the photosensitive drum is scraped by the cleaner blade and collected into the waste toner container.

7.4.4 Transfer Roller Engagement/disengagement Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Overview

In the machine, the transfer roller is engaged with or disengaged from the photosensitive drum via the ETB to reduce the color photosensitive drum consumption at monochrome printing.

The transfer roller engagement/disengagement control is executed at the following timing.

- Multiple initial rotations at power-on
- Multiple initial rotations at door closing
- Image stabilization control
- Printing operation

The status of engagement/disengagement during printing operation differs depending on the printing mode (monochrome or color mode).

This control works with the developing cylinder engagement/disengagement operation.

T-7-4

Color mode		Transfer roller	Developing cylinder
Color printing		All color cylinders are engaged.	All color cylinders are engaged.
Monochrome printing	Plain paper, Transparency	Only the black color cylinder is engaged.	Only the black color cylinder is engaged.
	Others*	All color cylinders are engaged.	
Power-off/standby		All color cylinders are disengaged.	All color cylinders are disengaged.

*: Thick paper, envelope, rough paper, small-size paper, thin paper (H/H environment), thin paper (when thin paper/rough paper is specified in the special control mode)

MEMO:

- The photosensitive drum consumption is affected by the drum rotation time.
At monochrome printing of plain paper or transparency, the photosensitive drums of Y, M, and C are disengaged from the ETB so that they do not rotate. In this condition, the sheet is attracted to the ETB by an attraction bias and fed to the black color photosensitive drum.
However, when feeding thick paper and envelopes, the photosensitive drums of Y, M, and C are engaged with the ETB because the absorption power by the attraction bias is weak for such media.
- This control is executed every time the printing mode is switched. When mixed printing of color and monochrome is performed, the print speed is reduced due to engagement/disengagement of the transfer roller.

Service mode:

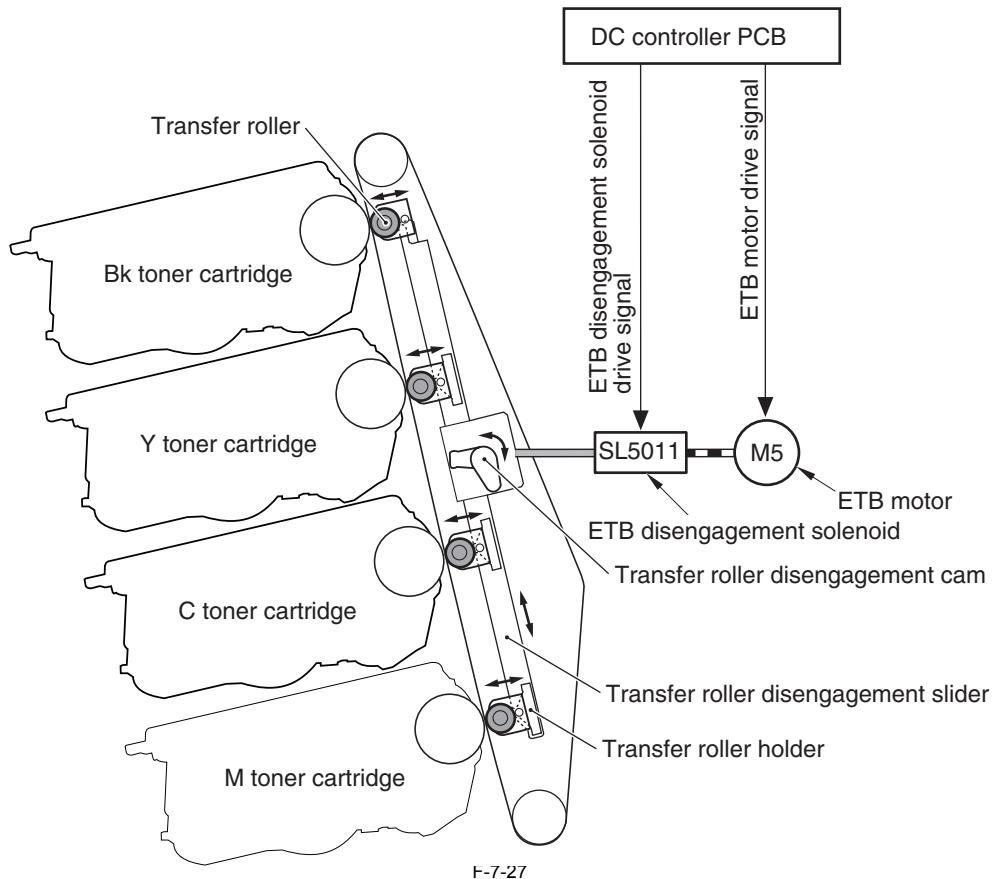

To prevent reduction of the print speed at mixed printing of color and monochrome, set the transfer roller to color mode (in which all color transfer rollers are engaged with the photosensitive drum).

COPIER> FUNCTION> SPLMAN> SPL53649

However, when this setting is made, the color photosensitive drum is consumed even at the time of monochrome printing.

Explanation of operation

When the DC controller turns ON the ETB disengagement solenoid (SL5011), the drive of the ETB motor (M5) is sent to the transfer roller disengagement slider via the transfer roller disengagement cam. The transfer roller is engaged with/disengaged from the ETB by working with the transfer roller disengagement slider.

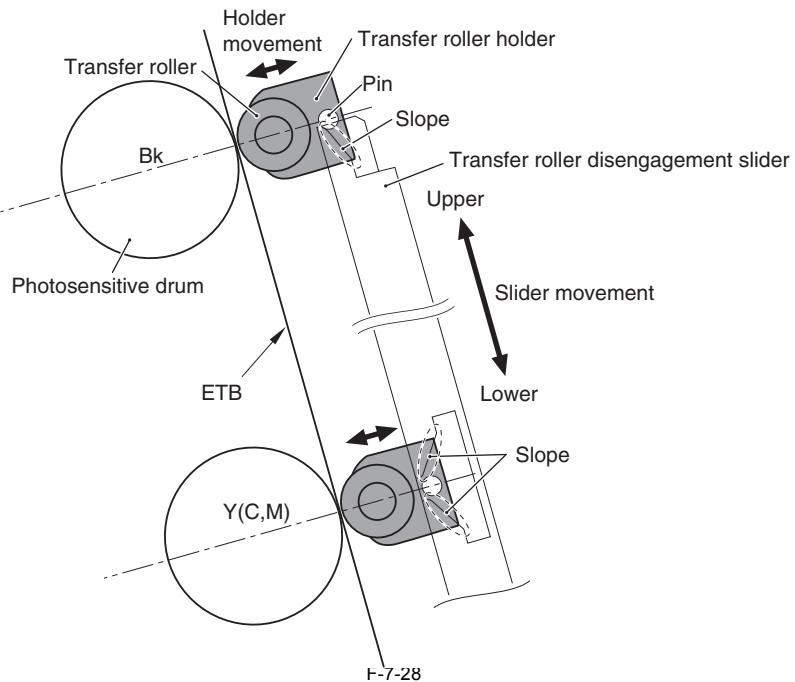

F-7-27

The transfer roller for each color is attached to the transfer roller holder.

When the pin on the transfer roller holder is hooked to the slope of the transfer roller disengagement slider, the transfer roller holder follows the operation of the transfer roller disengagement slider.

When the transfer roller disengagement slider moves up and down, the pin moves along the slope, and the transfer roller is engaged with or disengaged from the transfer roller.

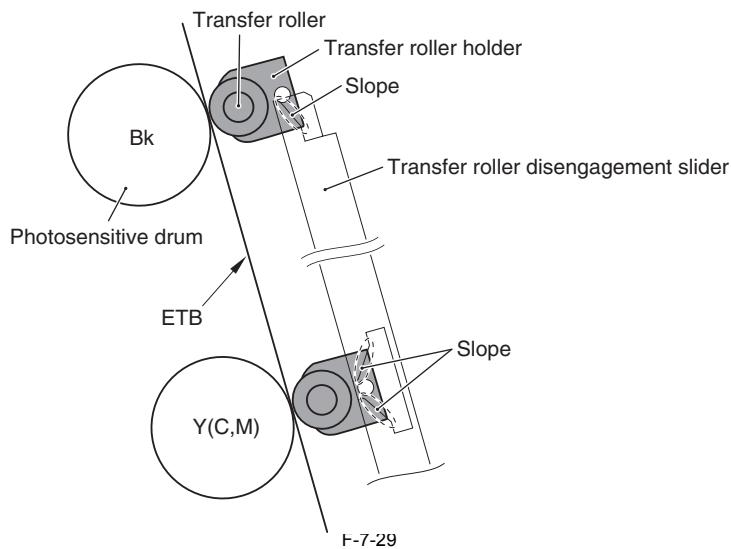

F-7-28

(a) Standard position (All colors' transfer rollers are engaged)

When the transfer roller disengagement slider is placed at the standard position, all the transfer roller holders are placed at the lowest position of the slope, so the all colors' transfer rollers are engaged with the ETB.

At the time of color printing or monochrome printing of the specified thick paper, all the transfer rollers are engaged with the ETB, so the transfer roller disengagement slider is considered to be at the standard position.

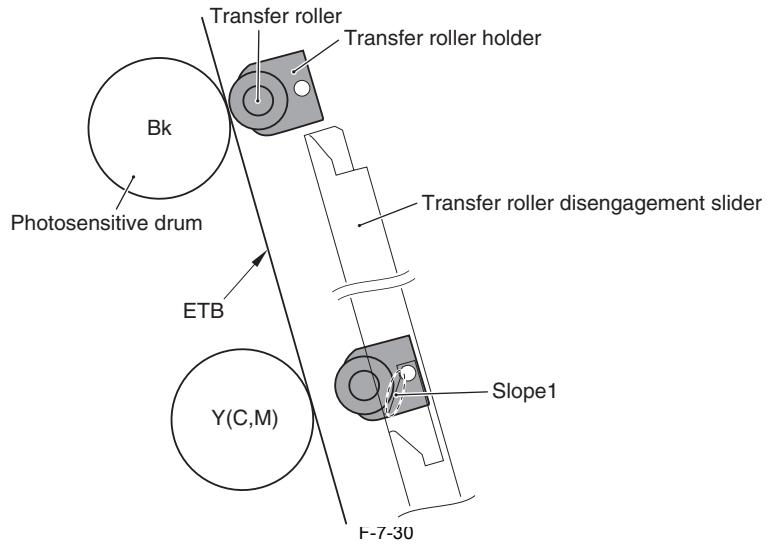

(b) Downward position (Only black transfer roller is engaged)

When the transfer roller disengagement slider is placed at the downward position, the yellow (Y) transfer roller holder moves to the highest position along the slope 1, so the transfer roller is disengaged from the ETB. The same applies to cyan (C) and magenta (M).

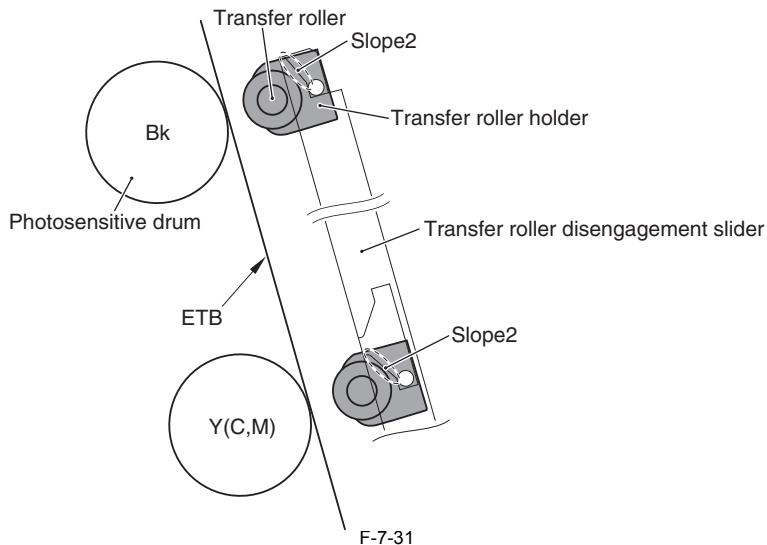

The black (Bk) transfer holder stays at the lowest position because the transfer roller disengagement slider has no slope. As a result, the transfer roller is engaged with the ETB.

At monochrome printing, only the black (Bk) transfer roller is engaged with the ETB, so the transfer roller disengagement slider is placed at the downward position.

(c) Upward position (All colors' transfer rollers are disengaged)

When the transfer roller disengagement slider is placed at the upward position, the transfer roller holder moves to the highest position along the slope 2, so the all colors' transfer rollers are disengaged from the ETB.

**Detection of the condition**

The engagement/disengagement condition of the transfer roller is detected when the power is turned ON or when the front cover is closed.

The DC controller measures the voltage of the transfer rollers for magenta (M) and black (Bk), and detects the engagement/disengagement condition of the transfer rollers based on the measurement result.

If the change of engagement/disengagement could not be confirmed when the engagement/disengagement condition of the transfer rollers was detected again after the transfer roller disengagement slider was moved, the DC controller measures the voltage of the transfer rollers again (retry control).

Error Codes:

E078 Transfer disengagement mechanism abnormality

When the engagement/disengagement condition could not be detected correctly after retry control was executed, the machine stops operation and displays the error code on the control panel.

7.5 Parts Replacement Procedure

7.5.1 Drum Motor

7.5.1.1 Before Removing the Drum Motor

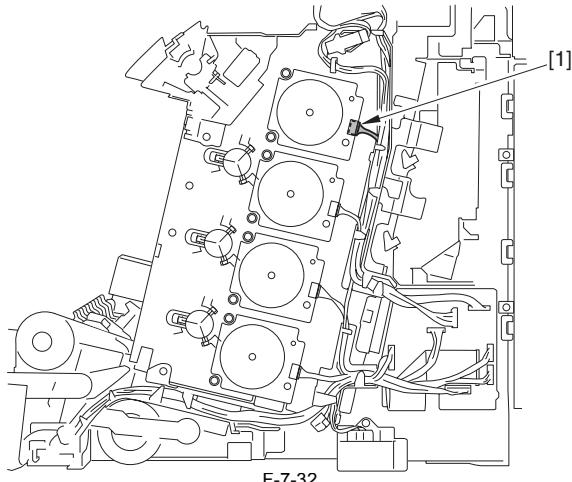

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#))Reference[Removing the ETB Unit]
- 2) Remove the rear cover unit. ([page 10-11](#))Reference[Removing the Rear Cover Unit]
- 3) Remove the right cover. ([page 10-11](#))Reference[Removing the Right Cover]

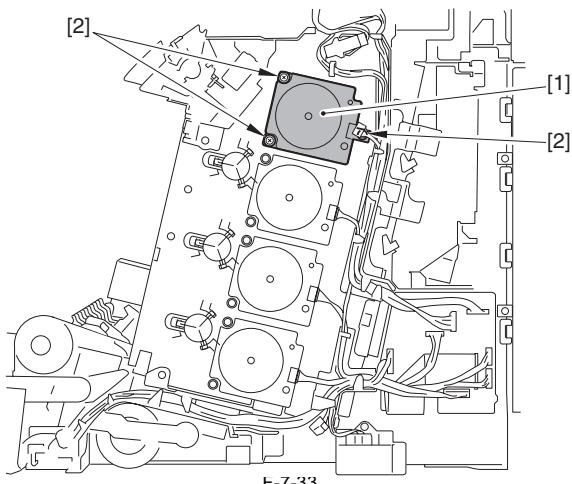

7.5.1.2 Removing the Drum Motor

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Disconnect the connector [1].

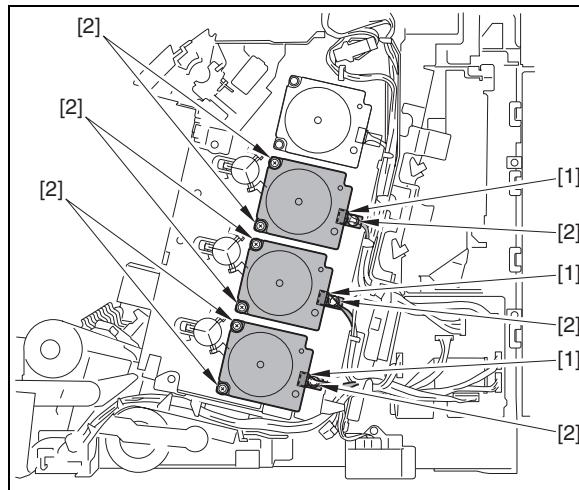

- 2) Remove the drum motor (Bk) [1].
- 3 screws [2]

MEMO:

When removing the drum motors of other colors, remove the following parts in the same way as the drum motor (Bk).

- 3 connectors [1]
- 9 screws [2]

7.5.2 Main Drive Unit

7.5.2.1 Before Removing the Main Drive Unit

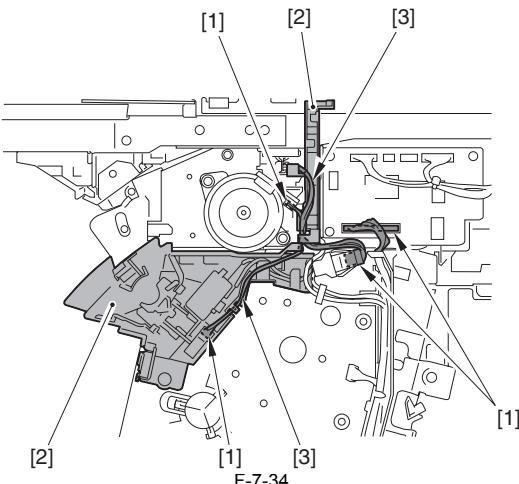

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#))Reference[Removing the ETB Unit]
- 2) Remove the toner cartridge.
- 3) Remove the rear cover unit. ([page 10-11](#))Reference[Removing the Rear Cover Unit]
- 4) Remove the right cover. ([page 10-11](#))Reference[Removing the Right Cover]
- 5) Remove the drum motor. ([page 7-26](#))Reference[Removing the Drum Motor]

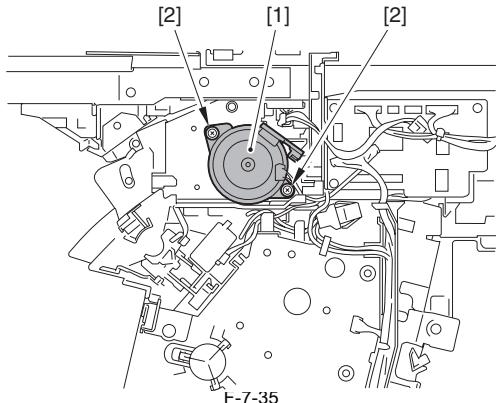

7.5.2.2 Removing the Main Drive Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

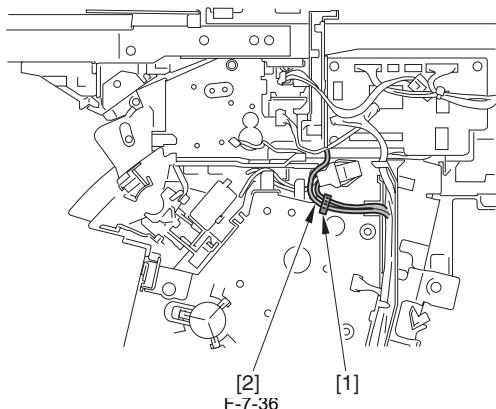

- 1) Disconnect the 4 connectors [1] and free the harness [3] from the 2 harness guides [2].

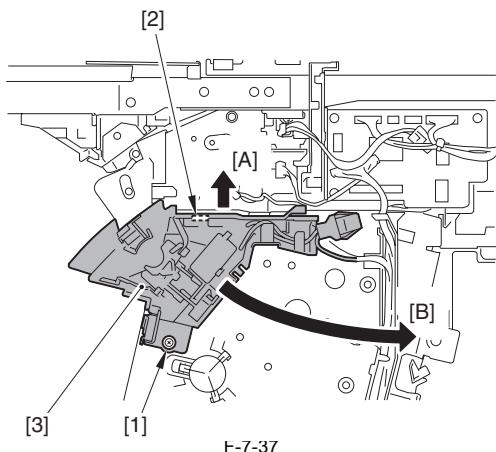

- 2) Remove the duplex feed motor [1].
- 2 screws [2]

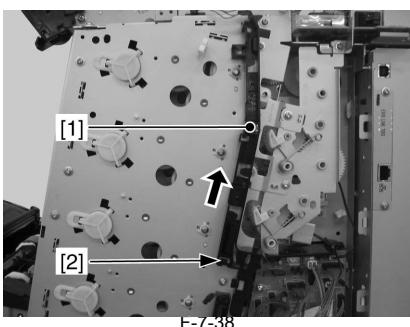

3) Free the harness [2] from the wire saddle [1].

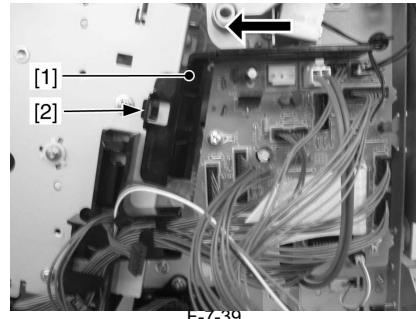

4) Remove the screw [1], remove the hook [2] in the direction of the arrow [A], and remove the interlock switch unit [3] in the direction of the arrow [B].

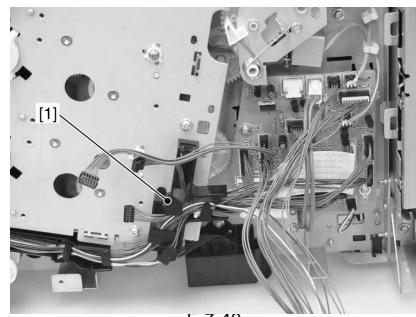

5) Slide the cable guide [1] to remove.
- 1 claw [2]

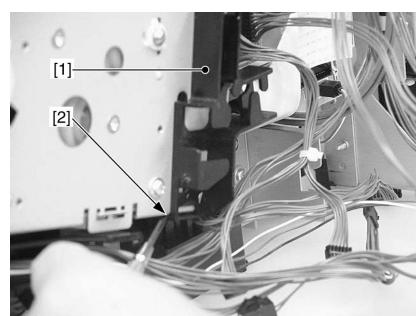

6) Slide the cable guide [1] to remove.
- 1 claw [2]

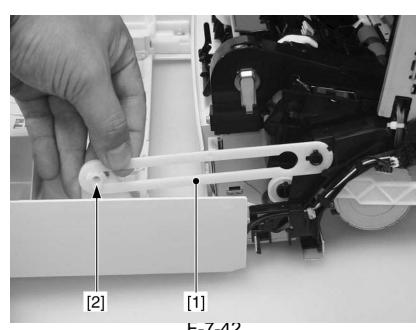

7) Free the cable from the cable guide [1].

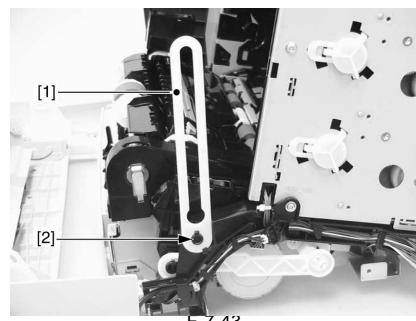

8) Remove the cable guide [1].
- 1 claw [2]

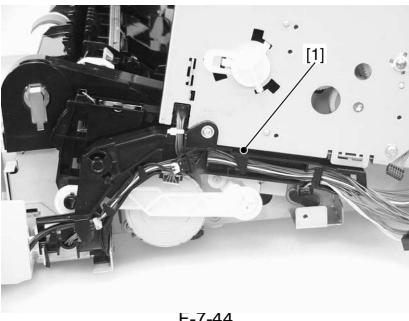

9) Remove the link [1] from the shaft [2].

10) Fit the link [1] with the cutoff of the shaft [2] to remove the link.

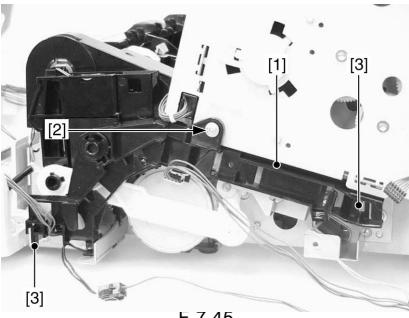

11) Free the cable from the cable guide [1].

F-7-44

12) Remove the cable guide [1].

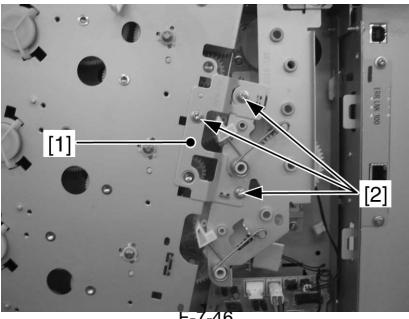

- 1 screw [2]
- 2 claws [3]

F-7-45

13) Remove the plate [1].

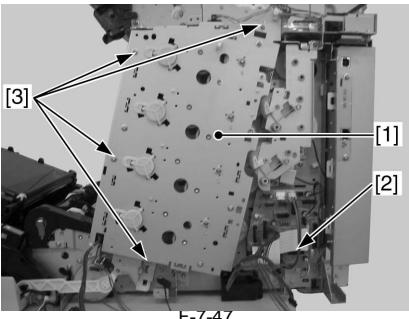

- 3 screws [2]

F-7-46

14) Remove the main drive unit [1].

- 1 connector [2]
- 4 screws [3]

F-7-47

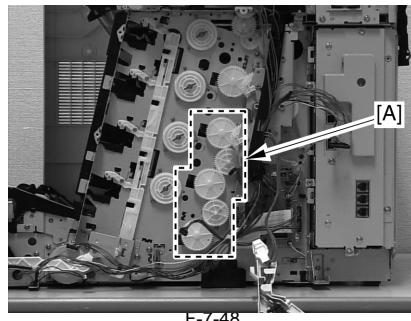

Do not disassemble the main drive unit in the field.
Disassembling it may cause a functional fault.

7.5.2.3 Point to Note When Installing the Main Drive Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

1. Alignment of the gears in the main drive unit

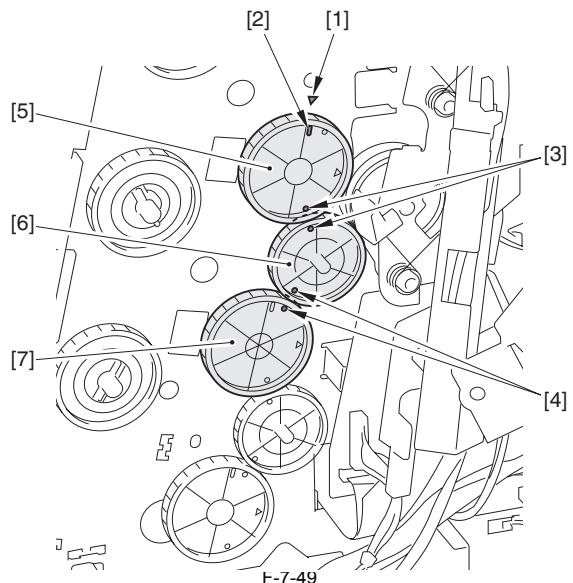

When installing the main drive unit, the corresponding gears of the host machine [A] need to be interlocked in order starting from the top of the 5 gears.

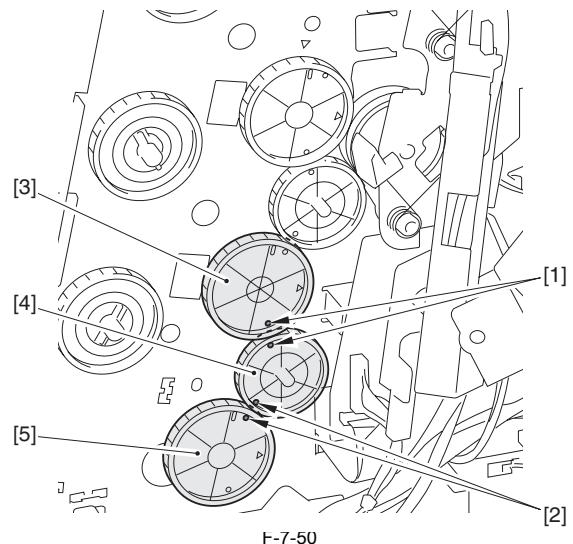

F-7-48

Following shows the procedure:

- 1) Align the gear [5]'s elongate hole [2] with the triangle [1].
- 2) Interlock the teeth of the gears [5] and [6] so that the holes [3] of the gears will lie right next to each other.
- 3) Interlock the teeth of the gears [6] and [7] so that the holes [4] of the gears will lie right next to each other.

- 4) Interlock the teeth of the gears [3] and [4] so that the holes [1] of the gears will lie right next to each other.
- 5) Interlock the teeth of the gears [4] and [5] so that the holes [2] of the gears will lie right next to each other.

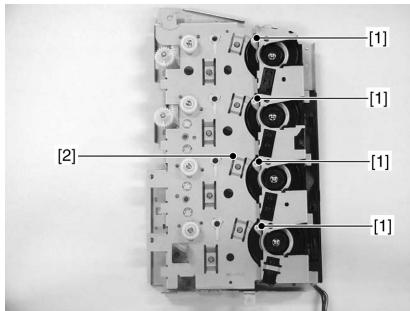

When interlocking the gears [A], the teeth of the gears must be aligned completely.

2. Alignment of the main drive unit as Service Parts

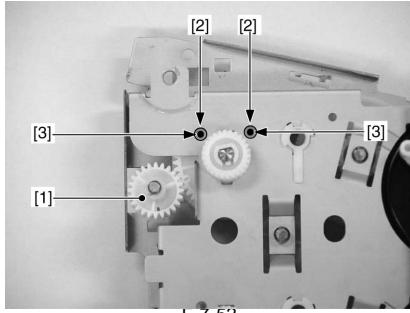

When removing the shipping lock that is attached with the main drive unit as a Service Parts, or when removing the main drive unit for servicing, the main drive unit must be aligned before installing to the host machine.

- Shift the 4 levers [1] of the main drive unit [2] upward.

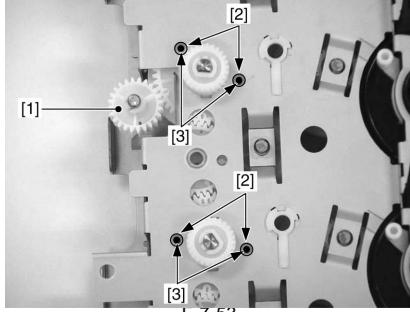

F-7-51

- Turn the gear [1] and align the holes [2] and the circles [3] each in 2 locations.

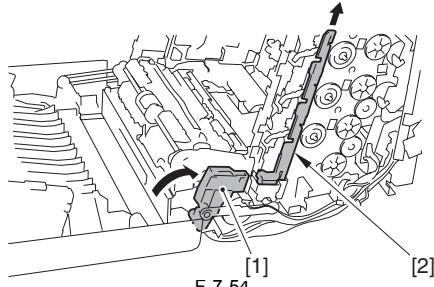

F-7-52

- Turn the gear [1] and align the holes [2] and the circles [3] each in 2 locations.

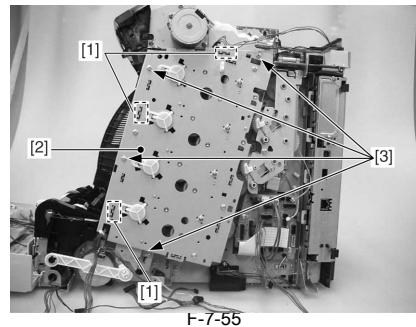

F-7-53

- Lift the drawer connector [1] and move the shutter arm [2] to upper.

F-7-54

- Align the 3 positioning parts [1] and install the main drive unit [2] with parallel to the side of the host machine.
- 4 screws [3]

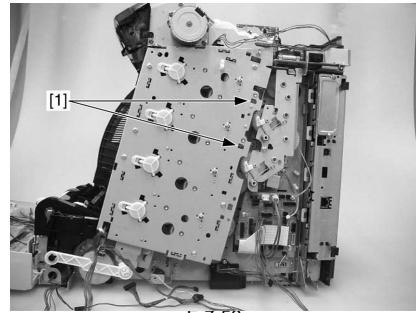

F-7-55

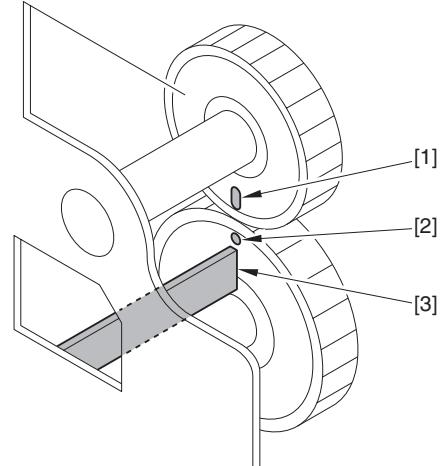

Since 5 interlocked gears [A] on the host machine are easy to disengage, be careful not to displace the alignment of gears when installing the main drive unit to the host machine.

- Confirm that the gear positions are properly aligned by checking from the 2 windows [1].

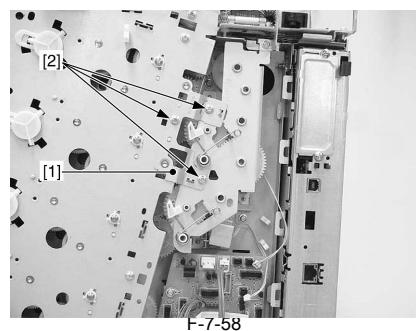

F-7-56

Alignment is adjusted properly if the elongate holes of the gears [1] and [2] and the plate [3] are aligned in a straight line as shown in the figure below.

F-7-57

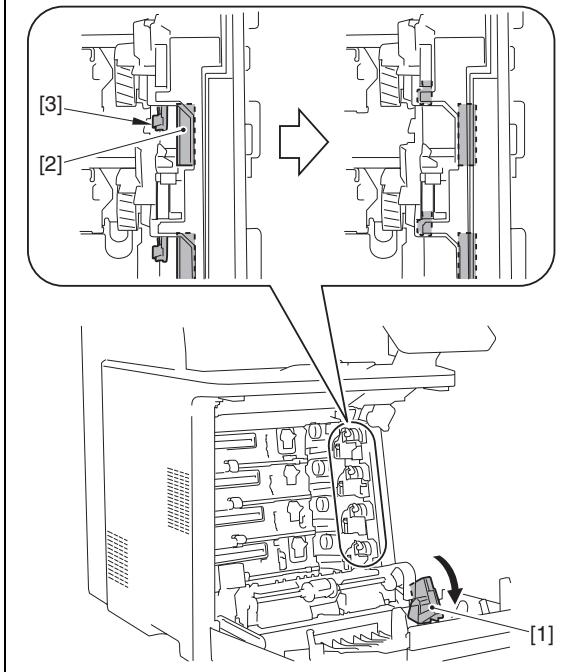

- Install the plate [1].
- 3 screws [2]

F-7-58

Move the drawer connector [1] at the right side to check that the couplings [2] and the lock [3] of the toner cartridge for the four colors; BK, Y, C, and M work with each other.

7.5.3 Developing Estrangement Solenoid

7.5.3.1 Before Removing the Developing Disengage Solenoid

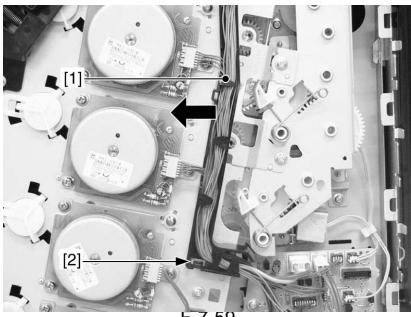

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]

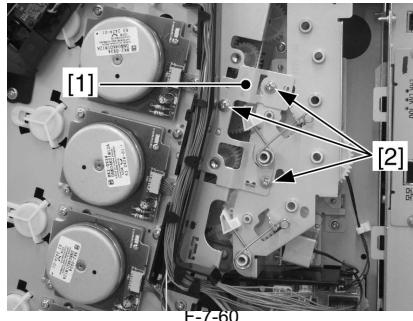

7.5.3.2 Removing the Developing Disengage Solenoid

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

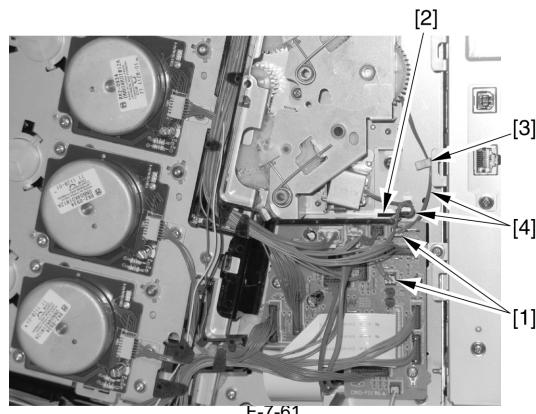

- 1) Remove the claw [2] to move the cable guide [1] toward the left.

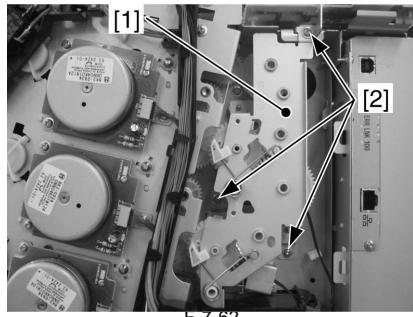

- 2) Remove the plate [1].
- 3 screws [2]

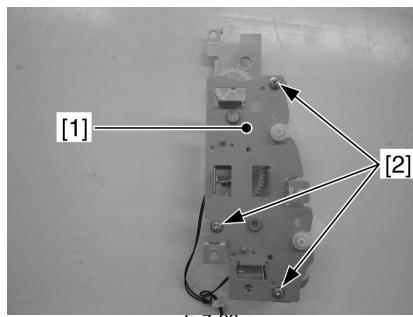

- 3) Disconnect the 2 connectors [1] and free the harness [4] from the harness guide [2] and the wire saddle [3].

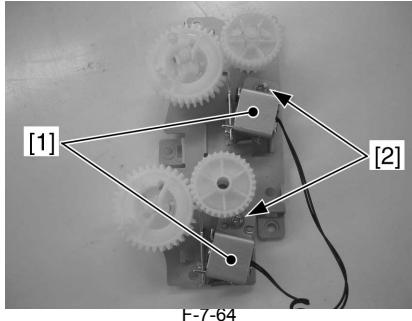

- 4) Remove the developing disengage drive unit [1].
- 3 screws [2]

- 5) Remove the plate [1].
- 3 screws [2]

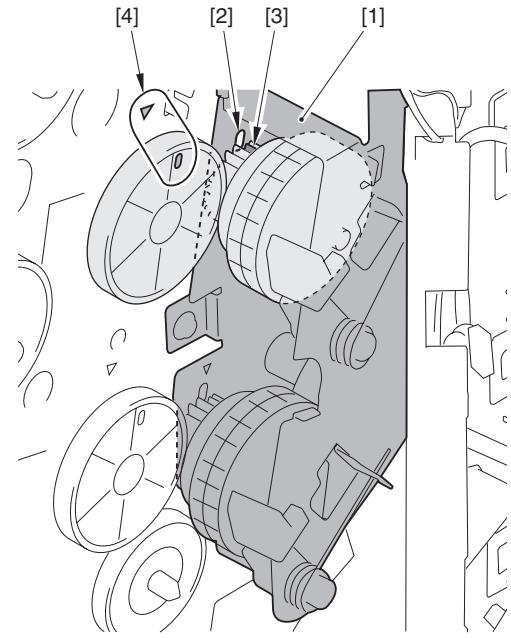

- 6) Remove the 2 developing disengage solenoids [1].
- 2 screws [2]

F-7-64

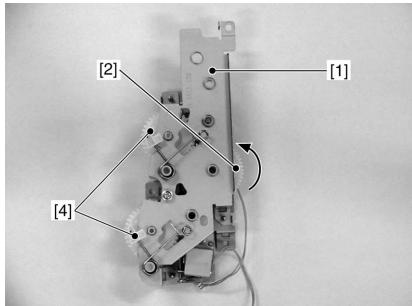

[1]. Make sure that the small-toothed gear is aligned with the elongate hole [2] (home position). Also, as shown in the figure [4], make sure that the triangle and the elongate hole of the gear lie right next to each other.

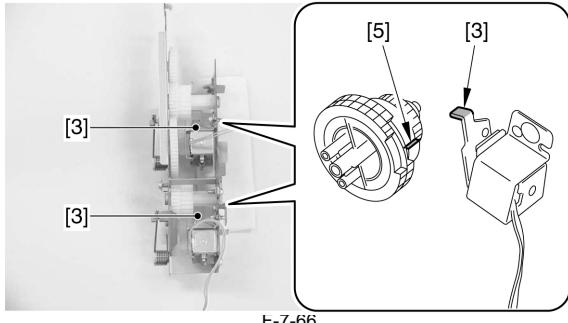

F-7-68

Confirming the alignment of the gear [5]

There is a small-toothed gear [3] in the developing disengage drive unit [1]. Make sure that the small-toothed gear is aligned with the elongate hole [2] (home position). Also, as shown in the figure [4], make sure that the triangle and the elongate hole of the gear lie right next to each other.

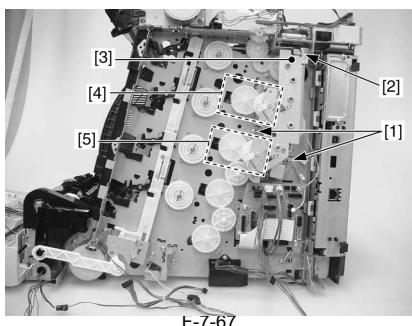

F-7-65

F-7-66

When the developing disengage drive unit is properly set to its home position, the gear [4] does not rotate if turning the gear [2], and there will be no sense of resistance when rotating the gear [2].

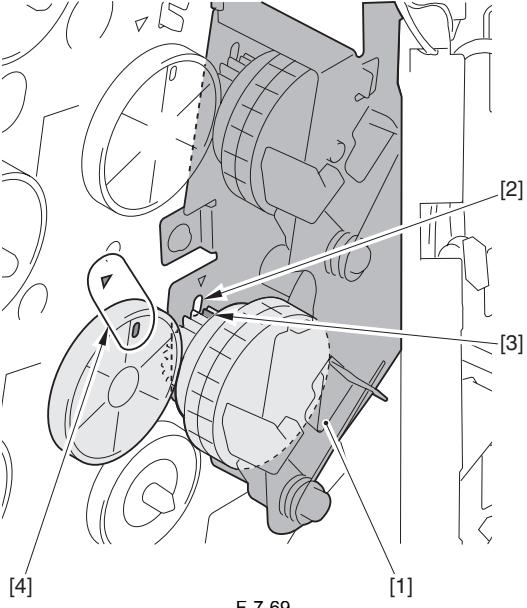

2. Alignment in installing the developing disengage drive unit
When installing the developing disengage drive unit while the main drive unit is removed, the corresponding gears of the host machine need to be aligned (interlocked).
Tighten the 2 screws [1] to the developing disengage drive unit [3] and tighten the screw [2] halfway to confirm the alignment of the gear [4] and the gear [5].

F-7-67

Confirming the alignment of the gear [4]

There is a small-toothed gear [3] in the developing disengage drive unit

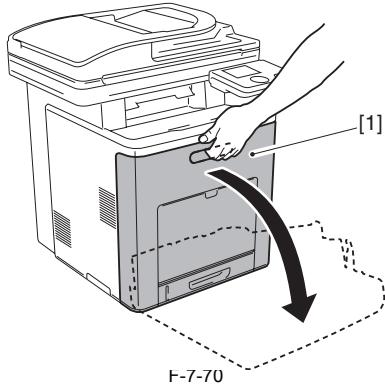

F-7-69

7.5.4 ETB Unit

7.5.4.1 Removing the ETB Unit

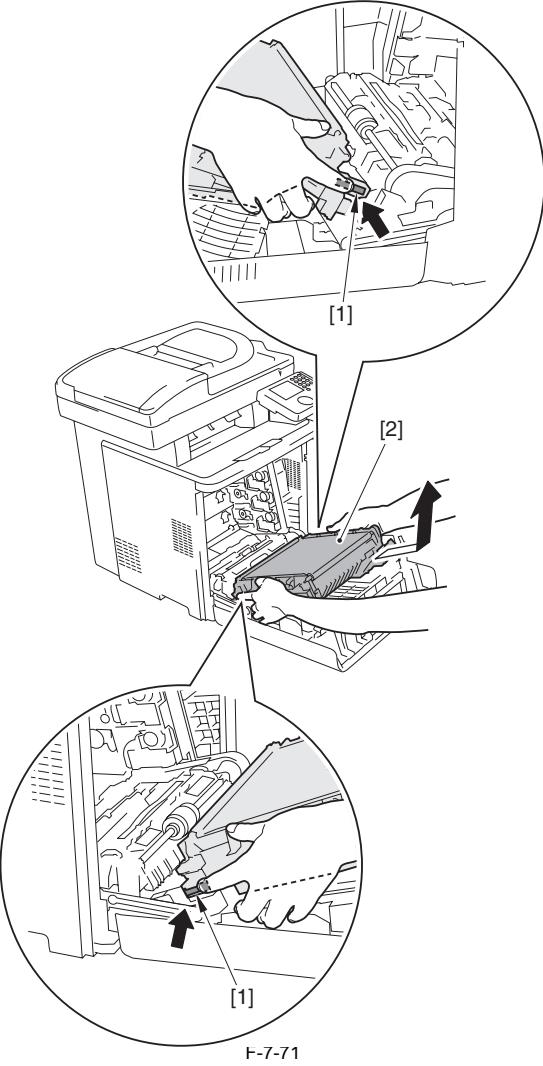

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Open the front cover [1].

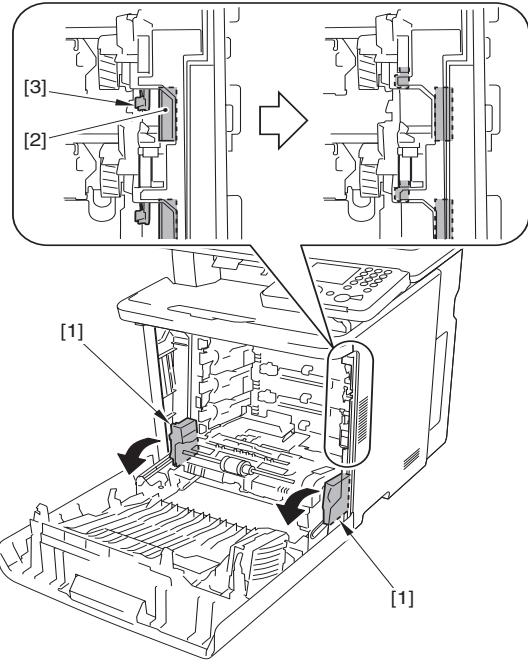

- 2) While pushing the ETB lock lever [1] (2 points at left and right), remove the ETB unit [2].

⚠ Points to Note At Handling
Be careful not to touch the surface of the ETB belt or damage it.
Dirts or small cuts on the belt may cause image faults.

When closing the front cover with the ETB unit removed and then opening it, the drawer connector [1] faces upward. The drawer connector facing upward may cause the following symptoms; and therefore, be sure to put down the 2 drawer connectors [1] if necessary.

- When the toner cartridge is not removed
The shutter of the toner cartridge is opened, resulting in deteriorated sensitivity of the photosensitive drum.
- When the toner cartridge is removed
The coupling [2] and lock mechanism [3] of the toner cartridge works together and the toner cartridge cannot be installed.

7.5.5 ETB Motor

7.5.5.1 Before Removing the ETB Motor

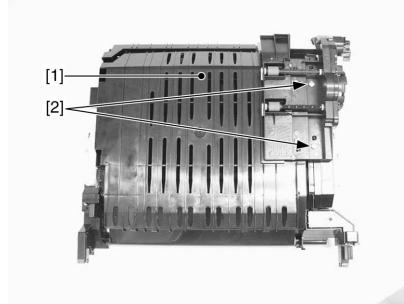

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#)) Reference [Removing the ETB Unit]

8.1 Overview/Configuration

8.1.1 Overview

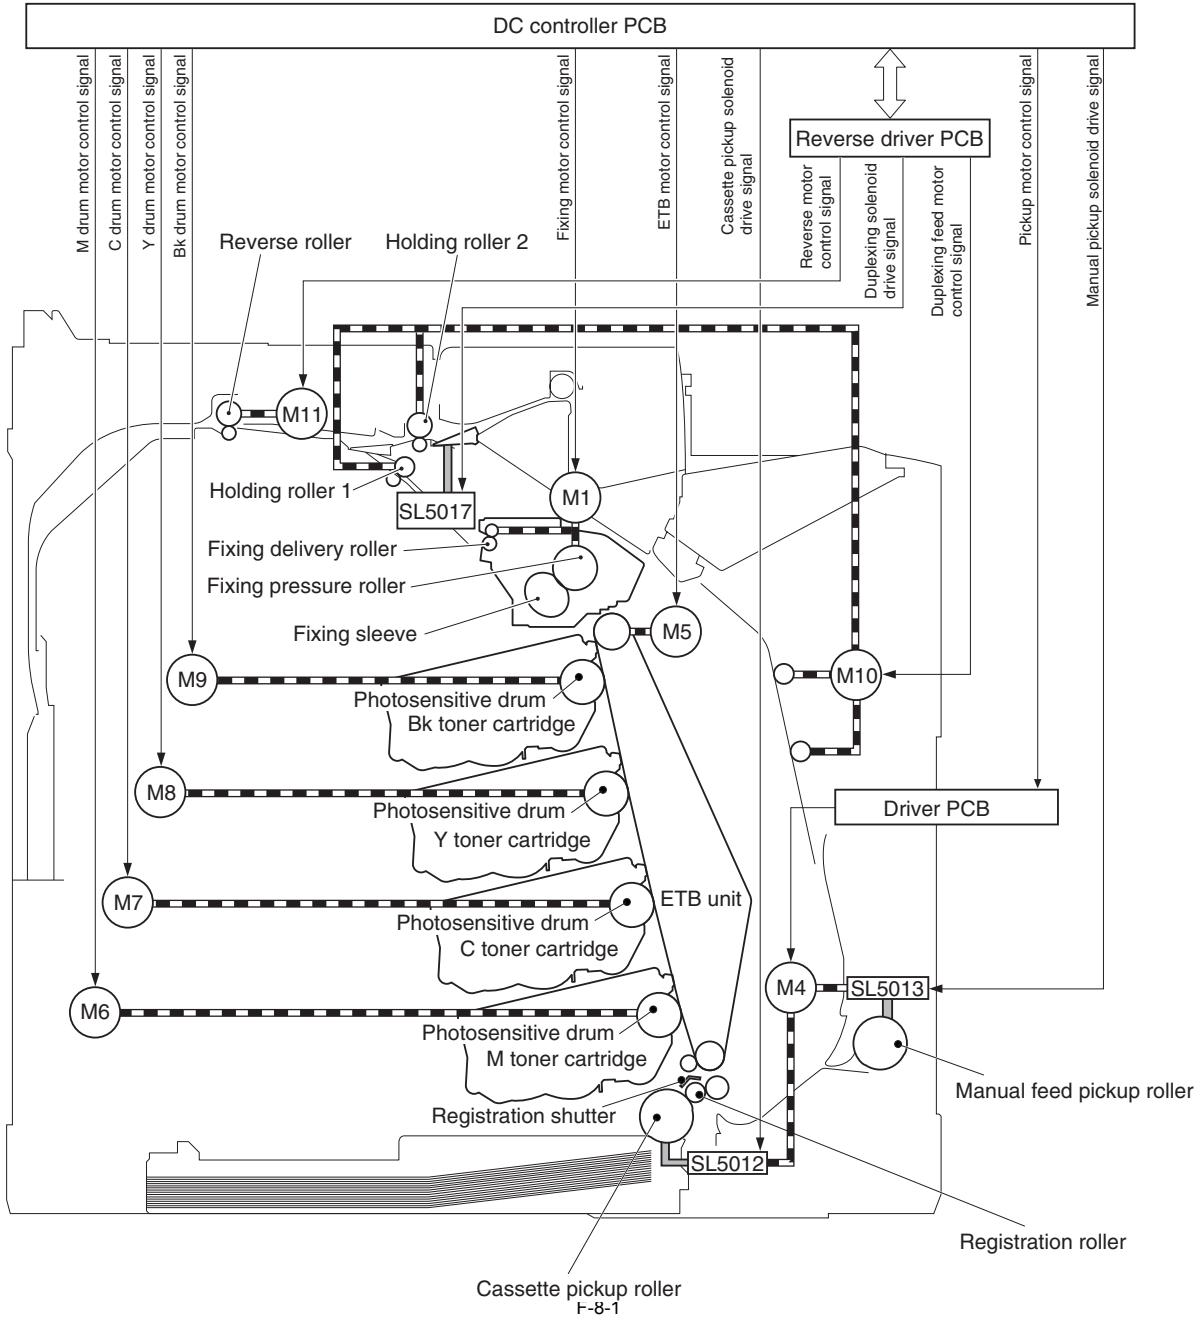

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The pickup/feed system picks up and feeds paper.

The machine has two pickup inlets; a cassette and a manual feed tray, and the paper is delivered to the delivery tray.

The pickup/feed system consists of the motor, solenoid, and feed roller, etc.

The reverse unit and duplexing feed assembly are controlled by the reverse driver PCB. Other motors, solenoids, and feed rollers are controlled by the DC controller.

M1: Fixing motor

M5: ETB motor

M10: Duplexing feed motor

SL5012: Cassette pickup solenoid

SL5017: Duplexing solenoid

M4: Pickup motor

M6-9: Drum motors (magenta, cyan, yellow, black)

M11: Reverse motor

SL5013: Manual pickup solenoid

The cassette detection switch (SW2) detects the presence/absence of the cassette.

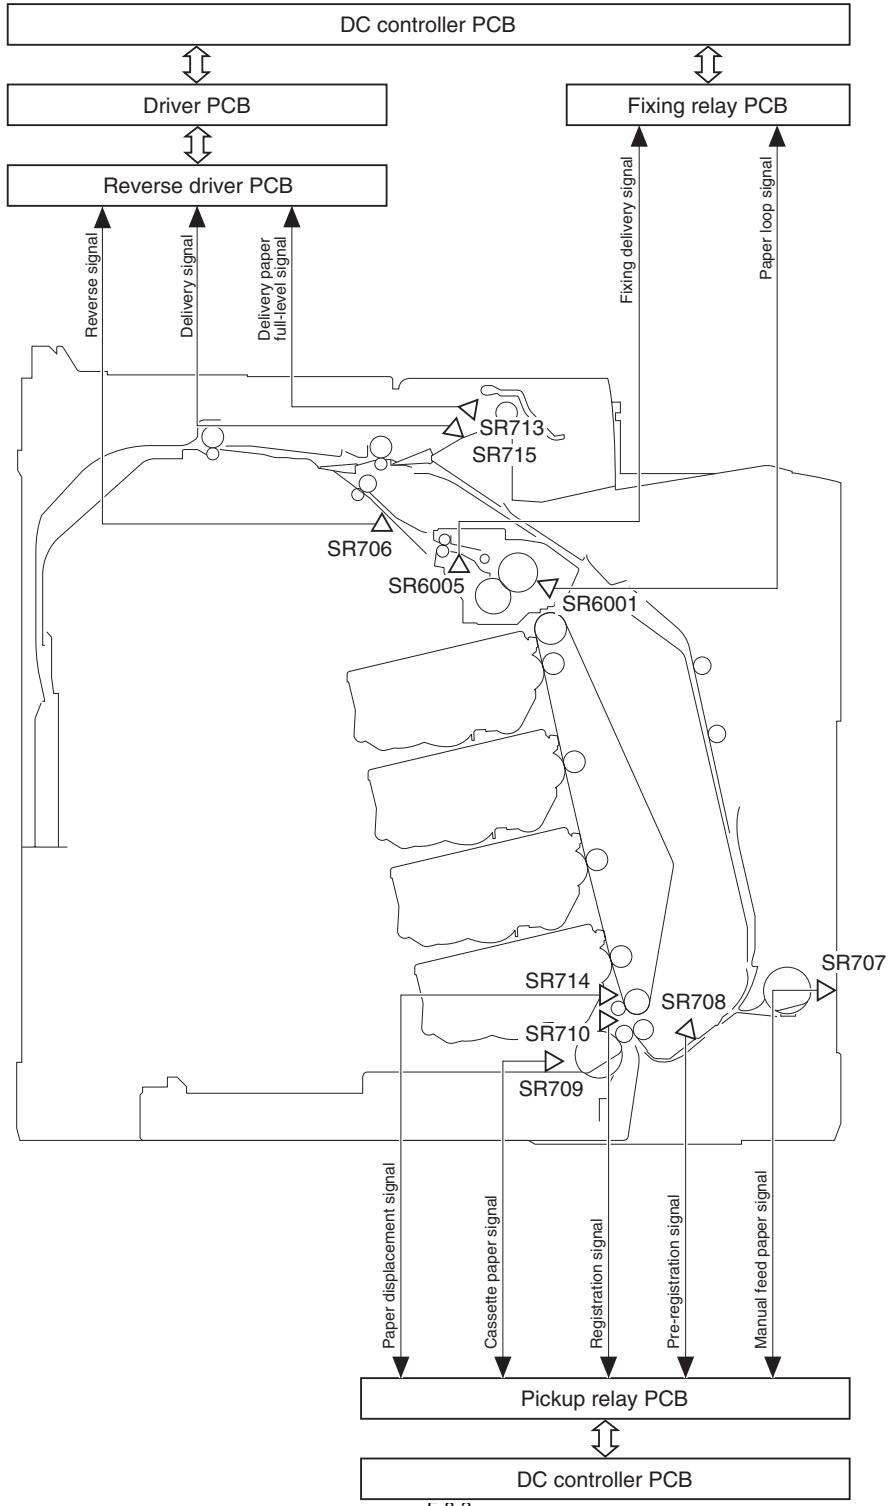

The manual feed paper sensor (SR707) and the cassette paper sensor (SR709) detect the presence/absence of the paper in the manual feed tray and the cassette.

The reverse sensor (SR706), pre-registration sensor (SR708), registration sensor (SR710), paper loop sensor (SR6001), and fixing delivery sensor (SR6005) detect the arrival and passage of the paper on the feed path.

The delivery paper full-level sensor (SR713) and delivery sensor (SR715) detect the condition of the delivery outlet.

The machine also has the paper displacement sensor (SR714).

When reverse operation is performed to feed paper for printing of the second page during duplexing printing, the machine controls the duplexing solenoid (SL5017) and uses the registration sensor (SR710).

F-8-2

SR706:	Reverse sensor	SR707:	Manual feed paper sensor
SR708:	Pre-registration sensor	SR709:	Cassette paper sensor
SR710:	Registration sensor	SR713:	Delivery paper full-level sensor
SR714:	Paper displacement sensor	SR715:	Delivery sensor
SR6001:	Paper loop sensor	SR6005:	Fixing delivery sensor

8.1.2 Interval Speed Increase Control

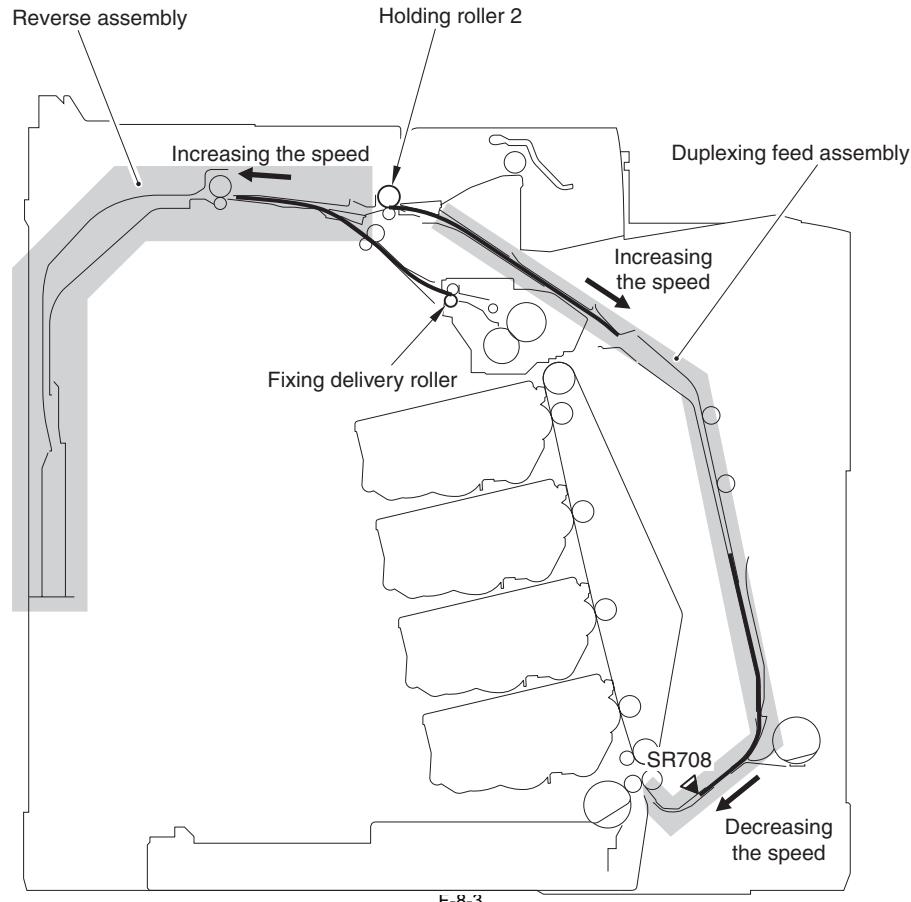

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

To increase printing speed, the machine increases the speed in an interval which does not affect image formation.

The DC controller increases the process speed four times faster when the paper is fed to the reverse assembly. It also increases the process speed of duplex printing four times faster at the duplex feed assembly.

T-8-1

Timing	Single-sided printing	Duplex printing
Timing of increasing the speed	After the trailing edge of the paper passes through the fixing delivery roller	After the trailing edge of the paper passes through the fixing delivery roller
Timing of decreasing the speed	After the trailing edge of the paper passes through the holding roller 2	When the leading edge of the paper reaches the pre-registration sensor

SR708: pre-registration sensor

F-8-3

8.2 Other Control

8.2.1 Cassette Pickup Mechanism

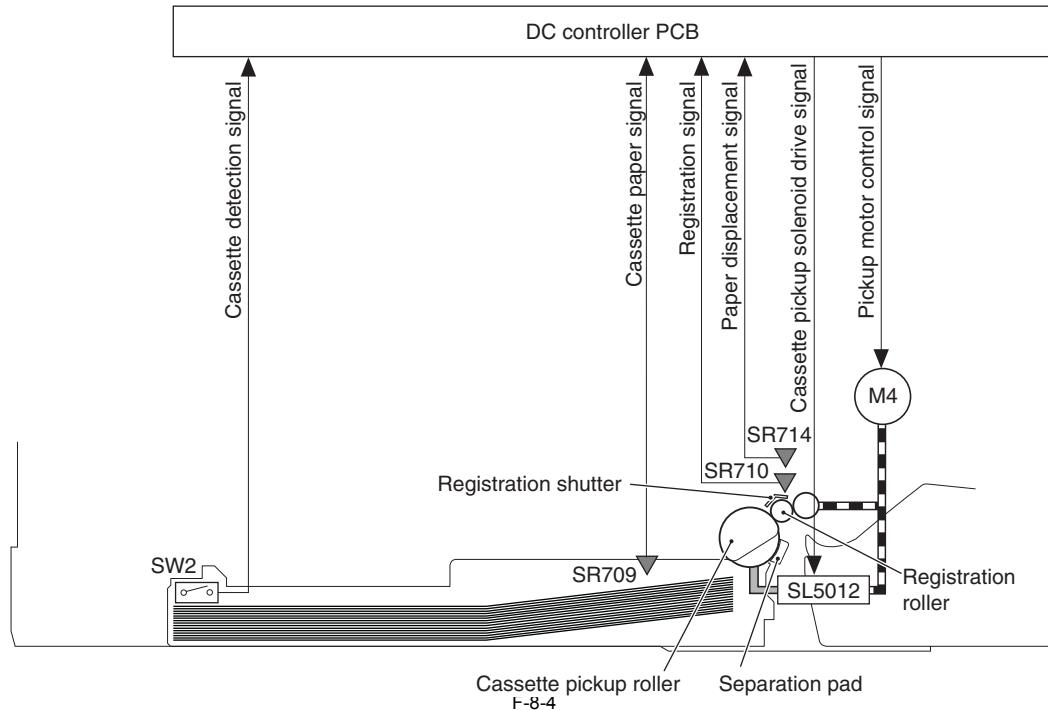

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The cassette pickup is a mechanism to pick up and feed the paper loaded in the cassette into the machine one by one. The pickup condition is detected by the following sensors or switch.

- Cassette detection switch (SW2): Detects the presence/absence of the cassette.
- Cassette paper sensor (SR709): Detects the presence/absence of the paper in the cassette.
- Registration sensor (SR710): Detects the lead edge of the fed paper.
- Paper displacement sensor (SR714): Detects the paper displacement.

Cassette pickup operation

- 1) The main controller sends a print command to the DC controller.
- 2) The DC controller drives the pickup motor (M4).
- 3) The DC controller turns ON the cassette pickup solenoid (SL5012).
When the drive is sent from the pickup motor, the cassette pickup roller rotates.
In this condition, double-fed paper is removed by using the mechanism of oblique surface separation and the separation pad, and the paper is fed one by one.
- 4) The paper is transported to the ETB unit after the skew is corrected by the registration roller and registration shutter.

8.2.2 Manual Feed Pickup Mechanism

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The manual feed pickup is a mechanism to pick up and feed the paper loaded on the manual feed tray into the machine one by one. The pickup condition is detected by the following sensors or switch.

- Cassette detection switch (SW2): Detects the presence/absence of the cassette.
- Manual feed paper sensor (SR707): Detects the presence/absence of the paper on the manual feed tray.
- Registration sensor (SR710): Detects the lead edge of the fed paper.
- Paper displacement sensor (SR714): Detects the paper displacement.

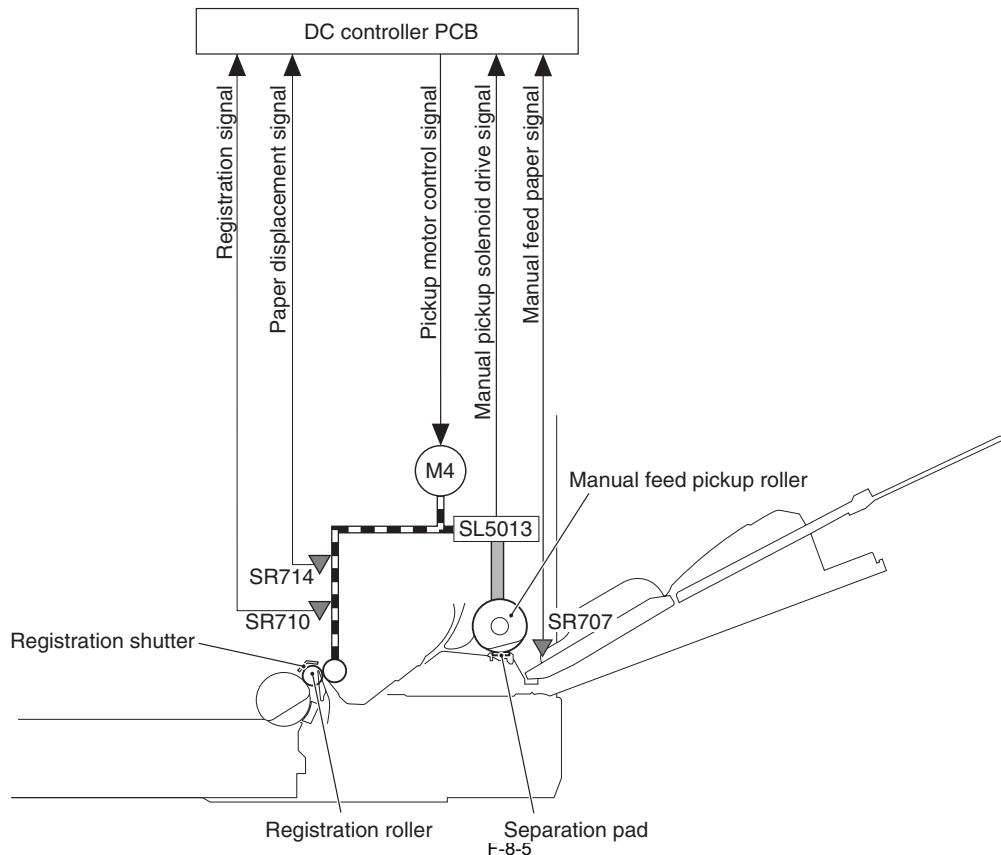

MEMO:

Since a cassette is included in the feed path for manual feed pickup, it is necessary to attach the cassette when manual feed pickup is performed.

Up to 100 sheets of paper (75 g/m²) can be fed from the manual feed pickup inlet.

Manual feed pickup operation

- 1) The main controller sends a print command to the DC controller.
- 2) The DC controller drives the pickup motor (M4).
- 3) The DC controller turns ON the manual feed pickup solenoid (SL5013).
- When the drive is sent from the pickup motor, the manual feed pickup roller rotates.
In this condition, double-fed paper is removed by the separation pad, and the paper is fed one by one.
- 4) The paper is transported to the ETB unit after the skew is corrected by the registration roller and registration shutter.

F-8-5

8.2.3 Skew Correction

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Before the paper fed from the cassette or manual feed tray is transported to the ETB unit, a skew is corrected.

1) The fed paper comes into contact with the registration shutter at the registration roller assembly.

The lead edge of the paper comes into contact with the registration shutter so that the right and left edges of the paper are aligned.

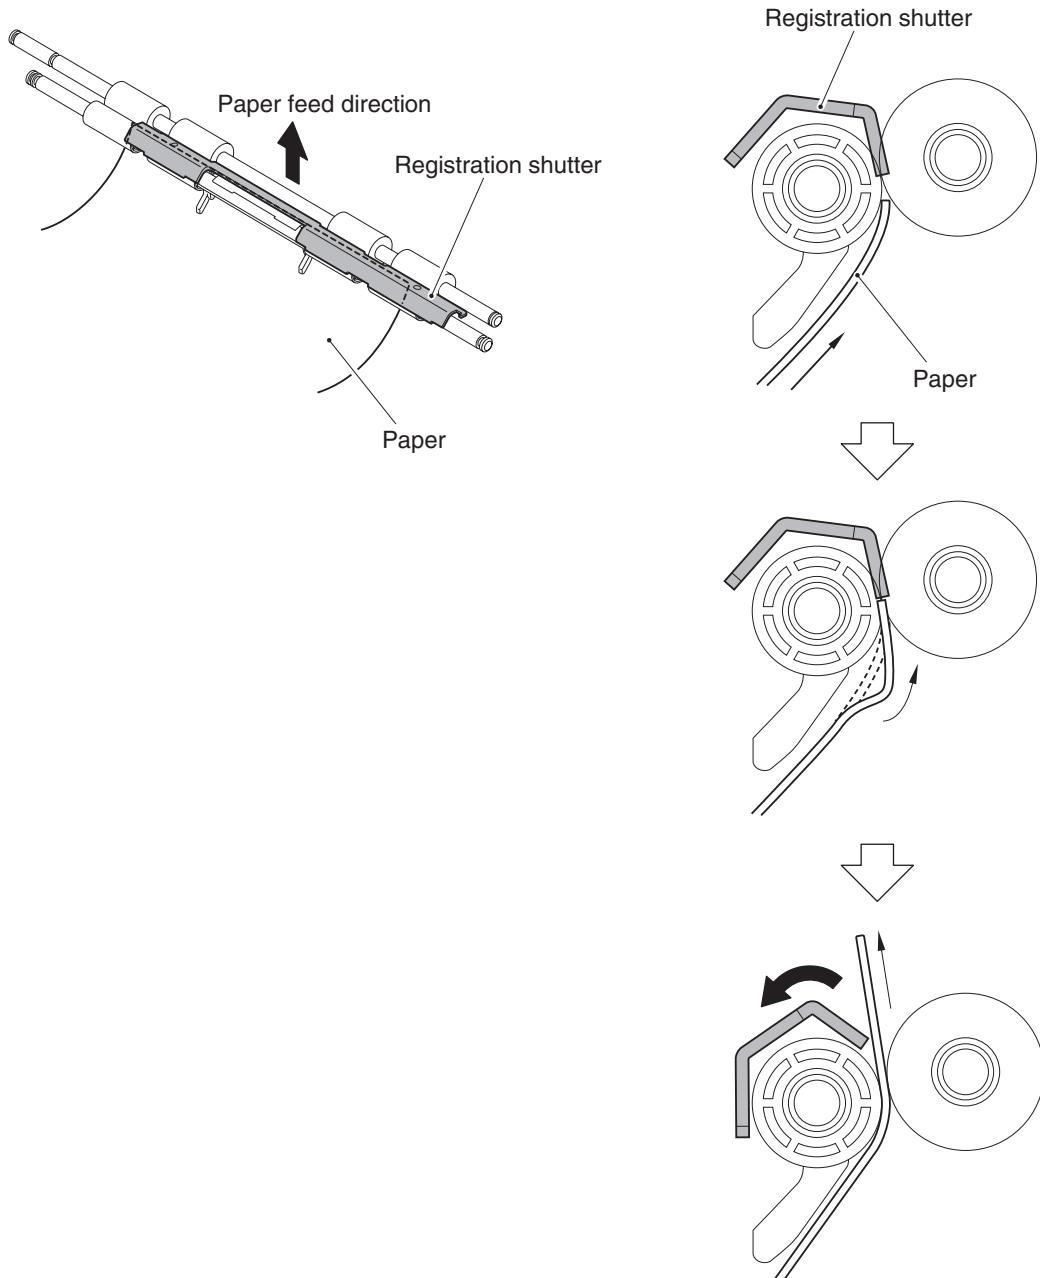

2) The paper is warped because the paper path is obstructed by the registration shutter.

Since the registration shutter is pressed by springs, the registration shutter does not move only with the power of the sheet trying to move ahead.

When the paper is warped, the stiffness of the paper is applied in addition to the power of trying to move ahead, which increases the power of lifting up the registration shutter.

3) When the power exceeding a specified level is applied to the paper, the registration shutter is lifted up.

In this condition, the paper is transported while keeping the right and left edges being aligned, and the skew is corrected.

8.2.4 Throughput-down Control

imageCLASS MF9170c / imageCLASS MF9150c

The machine prevents an abnormal temperature increase at the edge of the fixing sleeve by increasing an interval between sheets while keeping the paper feeding speed as needed.

Control of the fixing assembly is performed to keep the temperature of the fixing heater higher than the target temperature while the paper is transported so that the target fixing temperature is maintained (print temperature control).

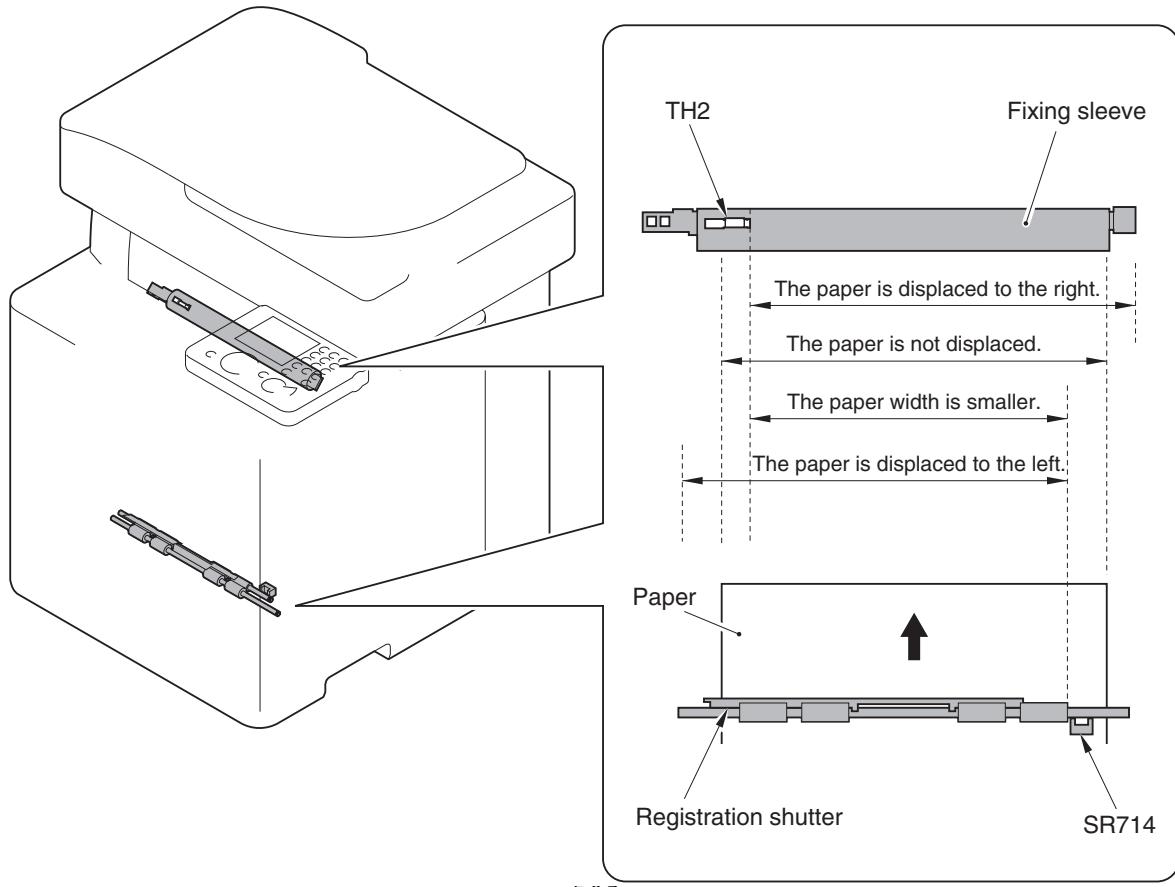

When the paper is displaced to one side, the paper does not pass a certain area at the edge of the fixing sleeve. In this area, no heat is transported to the paper, causing temperature increase every time the paper passes the area.

Even when the temperature of the fixing heater is set lower than the target temperature between sheets (control of temperature between sheets), the effect of temperature increase is reinforced when continuous printing is performed, and therefore an abnormal temperature increase occurs at the edge of the fixing sleeve.

To prevent an abnormal temperature increase, the machine increases an interval between sheets when the paper is fed displaced to one side, and promotes a temperature decrease between sheets.

The machine uses the paper displacement sensor (SR714) located at the right side of the registration shutter in order to detect the paper displacement. The sensor detects whether the paper width is smaller than the specified paper width or whether the paper is displaced to the left side of the feed path.

Whether the paper width is smaller than the specified paper width or whether the paper is displaced to the right side of the feed path can be detected by the fixing sub thermistor (TH2) because an abnormal temperature increase occurs at the left edge of the fixing sleeve.

F-8-7

Different throughput-down controls are executed depending on the result of detection performed by the paper displacement sensor and fixing sub thermistor.
T-8-2

Paper displacement	The paper is displaced to the left side	The paper width is smaller *1	The paper is not displaced	The paper is displaced to the right side
Paper displacement detection sensor (SR714)	No paper detection is performed		Paper detection is performed	
Fixing sub thermistor (TH2)	Lower than the specified temperature	Higher than the specified temperature	Lower than the specified temperature	Higher than the specified temperature
Throughput-down control	Instantly executed (the lowest value)	Executed step by step	No throughput-down control performed	No throughput-down control performed *2

*1: For the universal-size paper or the paper of which width is smaller than A4-size, an interval between sheets is changed step by step according to the temperature detected by the fixing sub thermistor.

*2: Although throughput-down control is not performed, a restriction is applied to the power supplied to the fixing heater.

Print speed when the throughput down control is executed

When the throughput down control is ON, print speed is switched step by step depending on the paper type or the temperature on the edge of the fixing sleeve etc. Following shows the print speed list in case of the minimum throughput.

T-8-3

Paper		Print speed (ppm)			
Type	Size	1st level	2nd level	3rd level	Last level
Plain paper/Plain paper H/Recycled paper/Color paper	B5R/A5R/EXECR	20.2	4.6	3.5	2.86
Heavy paper 1/Heavy paper 2/Rough paper	B5R/A5R/EXECR	16.1	4.4	3.4	2.76
Transparency	-	3.6	2.4	-	1.8
Postcard/Return postal card	-	10.1	3.8	3	2.5

8.2.5 Throughput-down Control

imageCLASS MF8450c

The machine prevents an abnormal temperature increase at the edge of the fixing sleeve by increasing an interval between sheets while keeping the paper feeding speed as needed.

Control of the fixing assembly is performed to keep the temperature of the fixing heater higher than the target temperature while the paper is transported so that the target fixing temperature is maintained (print temperature control).

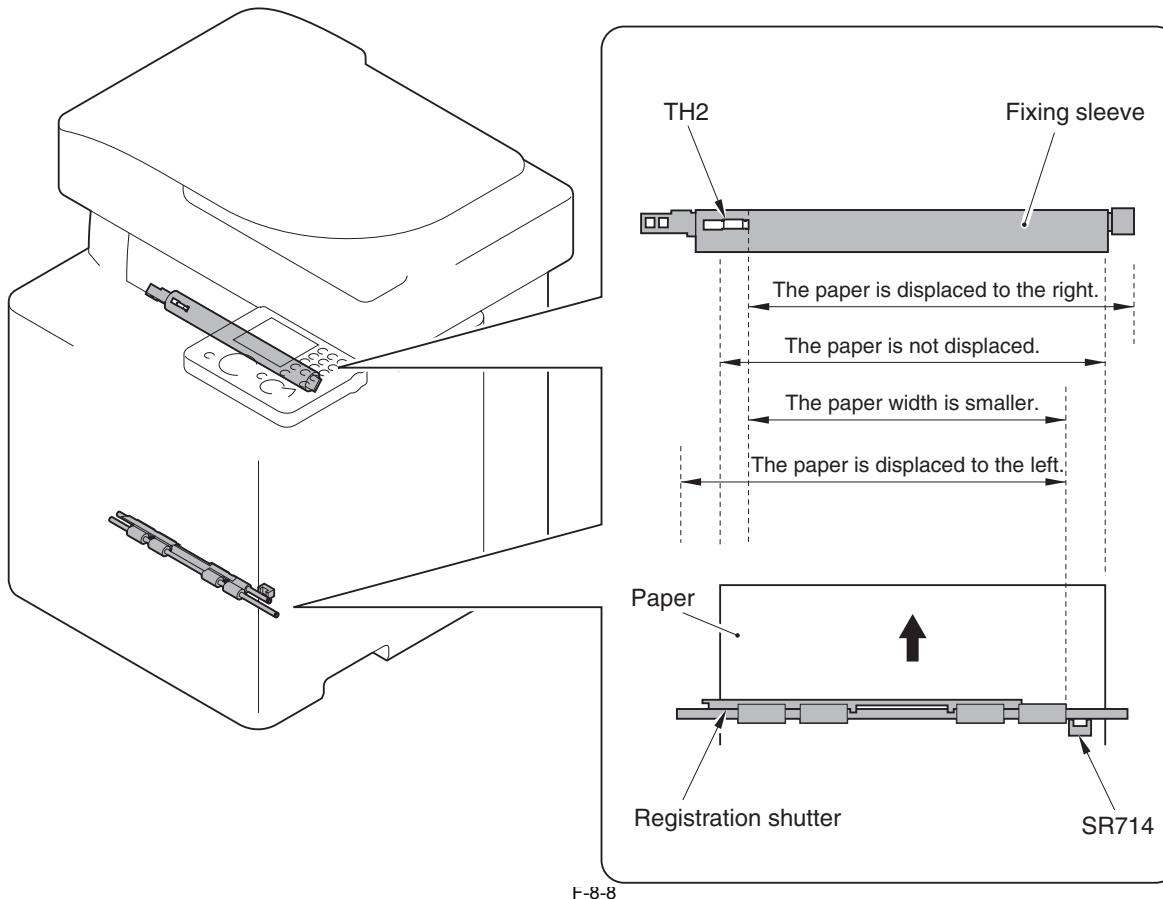

When the paper is displaced to one side, the paper does not pass a certain area at the edge of the fixing sleeve. In this area, no heat is transported to the paper, causing temperature increase every time the paper passes the area.

Even when the temperature of the fixing heater is set lower than the target temperature between sheets (control of temperature between sheets), the effect of temperature increase is reinforced when continuous printing is performed, and therefore an abnormal temperature increase occurs at the edge of the fixing sleeve.

To prevent an abnormal temperature increase, the machine increases an interval between sheets when the paper is fed displaced to one side, and promotes a temperature decrease between sheets.

The machine uses the paper displacement sensor (SR714) located at the right side of the registration shutter in order to detect the paper displacement. The sensor detects whether the paper width is smaller than the specified paper width or whether the paper is displaced to the left side of the feed path.

Whether the paper width is smaller than the specified paper width or whether the paper is displaced to the right side of the feed path can be detected by the fixing sub thermistor (TH2) because an abnormal temperature increase occurs at the left edge of the fixing sleeve.

F-8-8

Different throughput-down controls are executed depending on the result of detection performed by the paper displacement sensor and fixing sub thermistor.

T-8-4

Paper displacement	The paper is displaced to the left side	The paper width is smaller *1	The paper is not displaced	The paper is displaced to the right side
Paper displacement detection sensor (SR714)	No paper detection is performed		Paper detection is performed	
Fixing sub thermistor (TH2)	Lower than the specified temperature	Higher than the specified temperature	Lower than the specified temperature	Higher than the specified temperature
Throughput-down control	Instantly executed (the lowest value)	Executed step by step	No throughput-down control performed	No throughput-down control performed *2

*1: For the universal-size paper or the paper of which width is smaller than A4-size, an interval between sheets is changed step by step according to the temperature detected by the fixing sub thermistor.

*2: Although throughput-down control is not performed, a restriction is applied to the power supplied to the fixing heater.

Print speed when the throughput down control is executed

When the throughput down control is ON, print speed is switched step by step depending on the paper type or the temperature on the edge of the fixing sleeve etc. Following shows the print speed list in case of the minimum throughput.

T-8-5

Paper		Print speed (ppm)

Postcard/Return postal card	-	10.1	3.8	3	2.5

*: Throughput down is executed in the same manner in case of plain paper H, thick paper 1, thick paper 2 and rough paper.

8.2.6 Feeding Speed Control

imageCLASS MF9170c / imageCLASS MF9150c

The machine switches the paper feeding speed depending on the type of paper fed in order to prevent a fixing failure.

The DC controller switches the paper feeding speed over 4 settings (1/1 speed, 4/5 speed, 1/2 speed, 2/5 speed) depending on the paper type specified by the main controller.

T-8-6

Paper	Grammage	Paper type	Paper feeding speed
Plain paper	60 to 105 g/m ²	Plain paper	1/1
Thick paper	105 to 120 g/m ²	Thick paper 1	4/5
Thick paper	121 to 176 g/m ²	Thick paper 2	4/5
Postcard	up to 190 g/m ²	Postcard	1/2
Rough paper	-	Rough	2/5
Label	-	Label	4/5
Envelope	-	Envelope	4/5
Transparency	-	Transparency	2/5

8.2.7 Feeding Speed Control

imageCLASS MF8450c

The machine switches the paper feeding speed depending on the type of paper fed in order to prevent a fixing failure.

The DC controller switches the paper feeding speed over 3 settings (1/1 speed, 5/8 speed, 1/2 speed) depending on the paper type specified by the main controller.

T-8-7

Paper	Grammage	Paper type	Paper feeding speed
Plain paper	60 to 105 g/m ²	Plain paper	1/1
Thick paper	105 to 120 g/m ²	Thick paper 1	1/1
Thick paper	121 to 176 g/m ²	Thick paper 2	1/1
Postcard	up to 190 g/m ²	Postcard	5/8
Rough paper	-	Rough	1/2
Label	-	Label	1/1
Envelope	-	Envelope	1/1
Transparency	-	Transparency	1/2

8.2.8 Warp Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

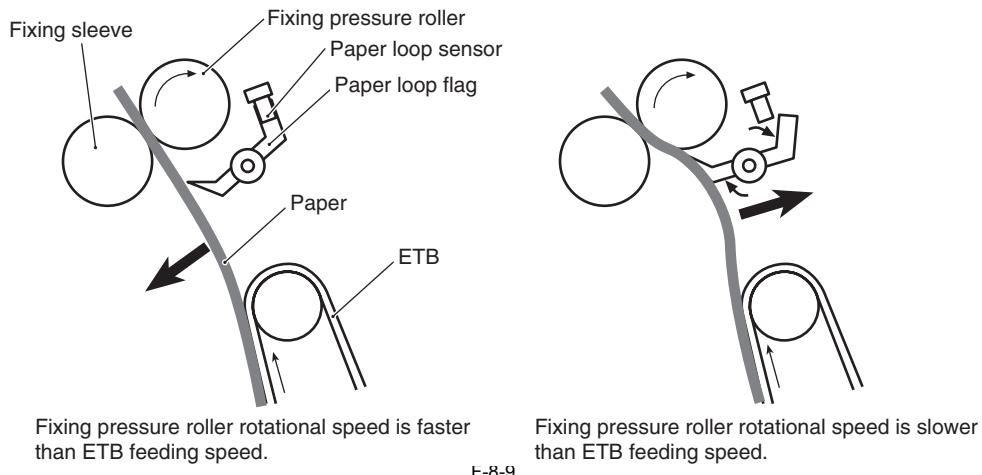

To prevent an image failure, it is necessary to keep the paper warped at an appropriate level between the fixing assembly and the ETB.

When the paper transport speed of the pressure roller is slower than that of the ETB, the paper warp increases, and an image defect or paper crease occurs. Conversely, the speed is faster than that of the ETB, the paper is pulled by the pressure roller, and a color displacement occurs in the sub-scanning direction.

The machine controls the rotational speed of the fixing motor (M1), which drives the pressure roller, to keep an appropriate level of paper warp.

When the paper is warped, the paper loop flag is pressed up, and the paper loop sensor (SR6001) is turned ON. In this case, the DC controller increases the rotational speed of the fixing motor.

When the paper loop sensor is turned OFF, the DC controller determines that the level of paper warp is small and decreases the rotational speed of the fixing motor.

MEMO:

If there are appropriate distance between the transfer unit and the fixing assembly in the product, this control is not necessary to make paper warped. However, since the machine performs vertical feeding and it is necessary to minimize its height, no distance can be secured between the transfer unit and the fixing assembly. Therefore, it is necessary to perform warp control.

8.2.9 Delivery

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Delivery is a mechanism to deliver the paper transported from the fixing assembly to the delivery tray.

The following sensors detect the paper condition.

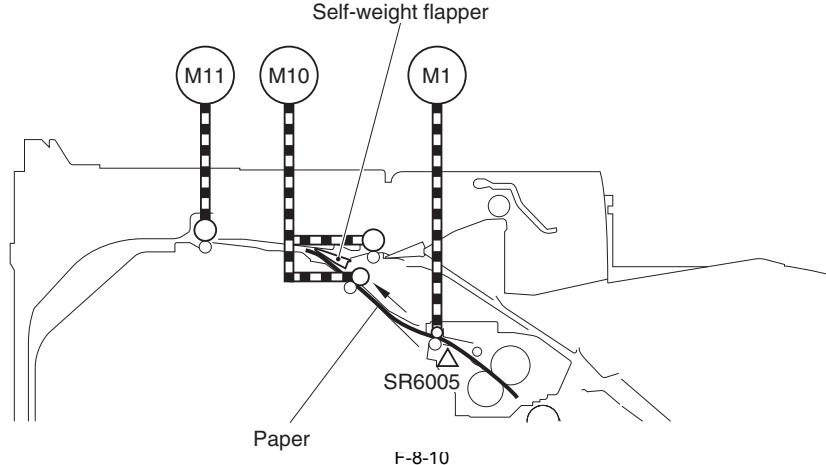

- Fixing delivery sensor (SR6005): Detect the paper delivered from the fixing unit.
- Reverse sensor (SR706): Detect the paper transported to the reverse assembly.
- Delivery sensor (SR715): Detect the paper transported to the delivery tray.
- Delivery paper full-level sensor (SR713): Detect the stack volume of paper delivered to the delivery tray.

Delivery operation

1) The fixed paper is delivered from the fixing unit.

2) When a certain period of time elapses after the fixing delivery sensor (SR6005) detects the lead edge of the paper, the duplexing feed motor (M10) and the reverse motor (M11) rotate forward.

The paper moves to the reverse assembly while pressing up the self-weight flapper.

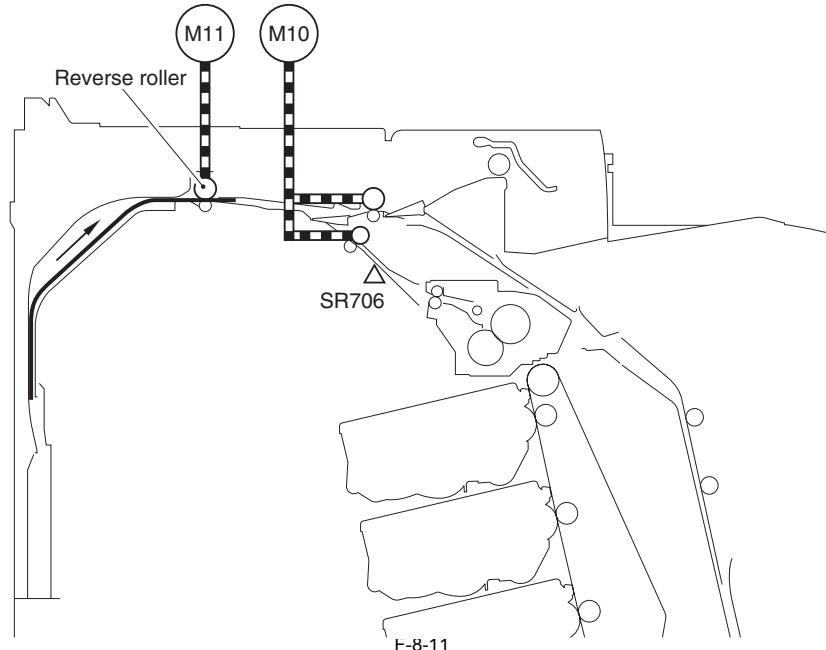

3) When a certain period of time elapses after the reverse sensor (SR706) detects the lead edge of the paper, the reverse motor (M11) stops.
This certain period of time varies depending on the paper length.

The paper which passed through the reverse roller before the reverse motor stopped is temporarily stored at the back of the machine.

4) The reverse motor rotates in reverse.

When the reverse motor rotates in reverse, the paper is transported to the opposite direction.

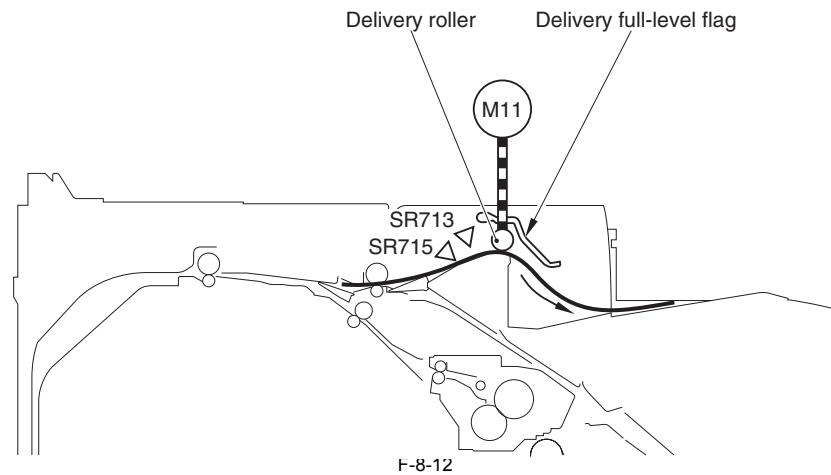

5) The paper is transported to the delivery tray by the delivery roller.

Since the duplexing/delivery flapper is turned down at this point, the feed path toward the duplexing feed assembly is closed.

Whether or not the paper has been delivered to the delivery tray is detected by the delivery sensor (SR715).

When the paper in the delivery tray reaches the full level, the delivery paper full-level flag comes into contact with the paper, and the full level is detected by the delivery paper full-level sensor (SR713).

8.3 Detection Jams

8.3.1 Jam Detection Outline

8.3.1.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine is provided with several paper sensors at specified positions on the feed path to detect whether the paper exists or whether the paper is transported normally or not.

When the machine determines that a jam has occurred based on the result of detection performed by each sensor, it stops print operation and displays an error message indicating that a jam occurred on the control panel at the same time.

T-8-8

JAM code	JAM type	JAM condition
0104	Pickup delay JAM	If the registration sensor (SR710) cannot detect the leading edge of the paper after 3 times retry within the specified time from turning on of cassette pickup solenoid (SL5012) or manual pickup solenoid (SL5013).
0208	Pickup stationary JAM	If the registration sensor (SR710) cannot detect the trailing edge of paper within approx. 3.2 sec after it detects the leading edge of paper.
010c	Delivery delay JAM	If the fixing delivery sensor (SR6005) cannot detect the leading edge of paper within approx. 3.0 sec after the registration sensor (SR710) detects the leading edge of paper.
0210	Delivery stationary JAM	If the fixing delivery sensor (SR6005) continues to detect the paper after the theoretical time plus time for feeding paper by 45 mm (approx. 3.1 sec) elapsed after the registration sensor (SR710) detects the leading edge of paper.
0214	Residual JAM	If any of the registration sensor (SR710), paper loop sensor (SR6001), fixing delivery sensor (SR6005) or reverse sensor (SR706) detects the paper during initial sequence.
1118	Door open JAM	If the front cover sensor (SR720) detects that the front door is open during the paper feeding.
0221	Reverse assembly JAM	If the paper length that is detected by the reverse sensor (SR706) is approx. 50 mm or more longer than the paper length that is detected by the delivery sensor (SR715). (When the double-fed paper drops on the back of the machine.)
0228	Duplexing re-pickup assembly JAM	The machine determines the reverse re-pickup jam if the registration sensor (SR710) cannot detect the presence of paper within the specified time* after the duplexing pickup starts.

*: Specified time differs depending on the feed speed.

1/1 speed: approx. 2.0 sec

4/5 speed: approx. 2.5 sec

1/2 speed: approx. 4.0 sec

8.3.2 Delay Jams

8.3.2.1 Pickup Delay JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine performs the retry control, which executes the pickup operation up to three times, in order to retrieve the pickup delay jam caused by the pickup failure. The machine determines that the pickup delay jam has occurred when the registration sensor (SR710) cannot detect the lead edge of the paper within a specified period of time after the cassette pickup solenoid (SL5012) or manual feed pickup solenoid (SL5013) is turned ON for the third pickup operation.

T-8-9

	Cassette	Manual feed tray
Time	Approx. 1.3 sec	Approx. 2.2 sec

8.3.2.2 Delivery Delay JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine determines that the delivery delay jam has occurred when the fixing delivery sensor (SR6005) cannot detect the lead edge of the paper even when approximately 3.0 seconds elapsed after the registration sensor (SR710) detected the lead edge of the paper.

8.3.2.3 Duplexing Pickup Delay JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine determines that the duplexing pickup delay jam has occurred when the lead edge of the paper does not reach the registration sensor (SR710) within approximately 2.0 seconds after the duplexing feed motor (M10) started feeding the paper placed in standby at the duplexing re-pickup position.

8.3.2.4 Duplexing Reverse Unit Delay JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine determines that the duplexing reverse unit delay jam has occurred when the reverse sensor (SR706) does not detect the absence of paper in the period from the start of duplexing reverse to the detection of the duplexing pickup delay jam.

8.3.3 Stationary Jams

8.3.3.1 Pickup Stationary JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine determines that the pickup stationary jam has occurred when the registration sensor (SR710) cannot detect the trailing edge of the paper even when approximately 3.2 seconds elapsed after it detected the lead edge of the paper.

8.3.3.2 Delivery Stationary JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine detects the delivery stationary jam after determining that the wrapping jam did not occur.

The machine determines that the delivery stationary jam has occurred when the fixing delivery sensor (SR6005) detects the presence of paper even when the time equivalent to theoretical time plus 45 mm (approximately 3.1 seconds) after the registration sensor (SR710) detects the trailing edge of the paper.

8.3.4 Other Jams

8.3.4.1 Wrapping JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine detects the wrapping jam after determining that the delivery delay jam did not occur.

The machine determines that the wrapping jam has occurred when the fixing delivery sensor (SR6005) detects the absence of paper before the time equivalent to the paper length detected by the registration sensor (SR710) minus 50 mm (approximately 1.9 seconds) elapses after the sensor detects the lead edge of the paper.

8.3.4.2 Residual JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine determines that the residual jam has occurred when any of the registration sensor (SR710), paper loop sensor (SR6001), fixing delivery sensor (SR6005), or reverse sensor (SR706) detects the paper at the initial sequence.

8.3.4.3 Door Open JAM

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine determines that the door open jam has occurred when the front cover sensor (SR720) detects that the front cover is opened during paper feeding.

8.3.4.4 Automatic Delivery Function

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

When the registration sensor (SR710) detects the presence of paper after detecting the absence of paper at the initial sequence after the power was turned on or the front cover was closed, the machine drives the motors and solenoids in the feeding system and delivers the residual paper automatically.

8.4 Duplex Feeding

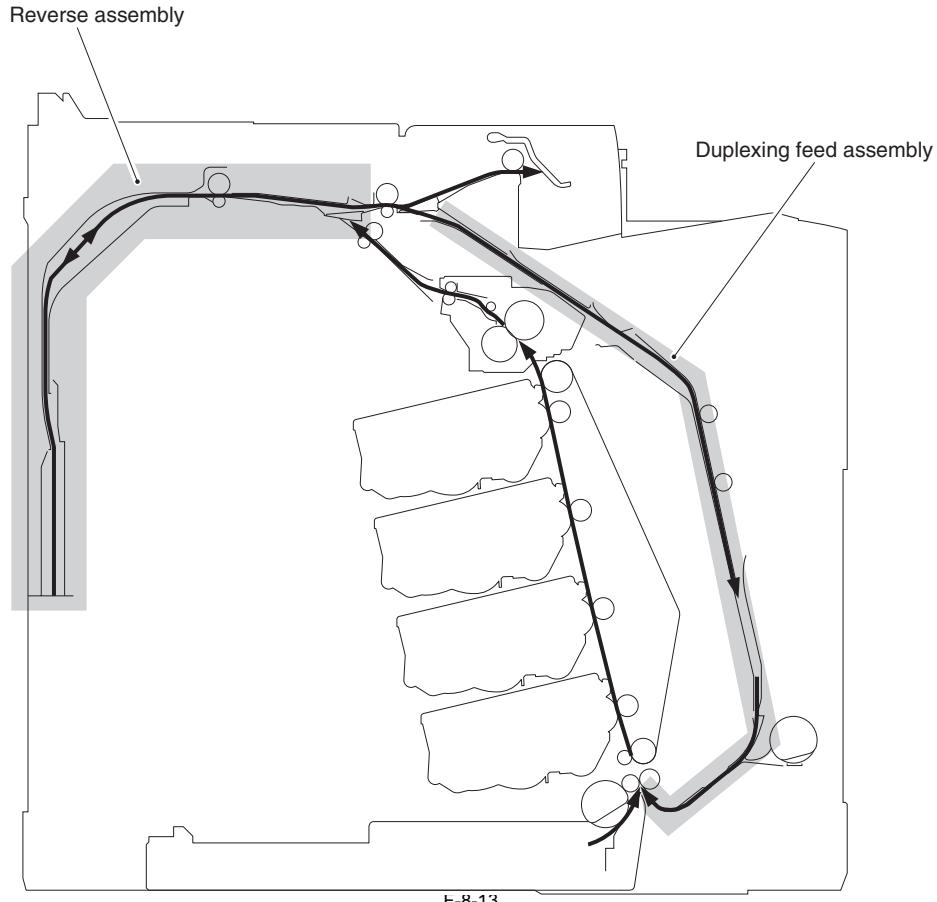

8.4.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The paper fed from the fixing assembly to the reverse assembly.

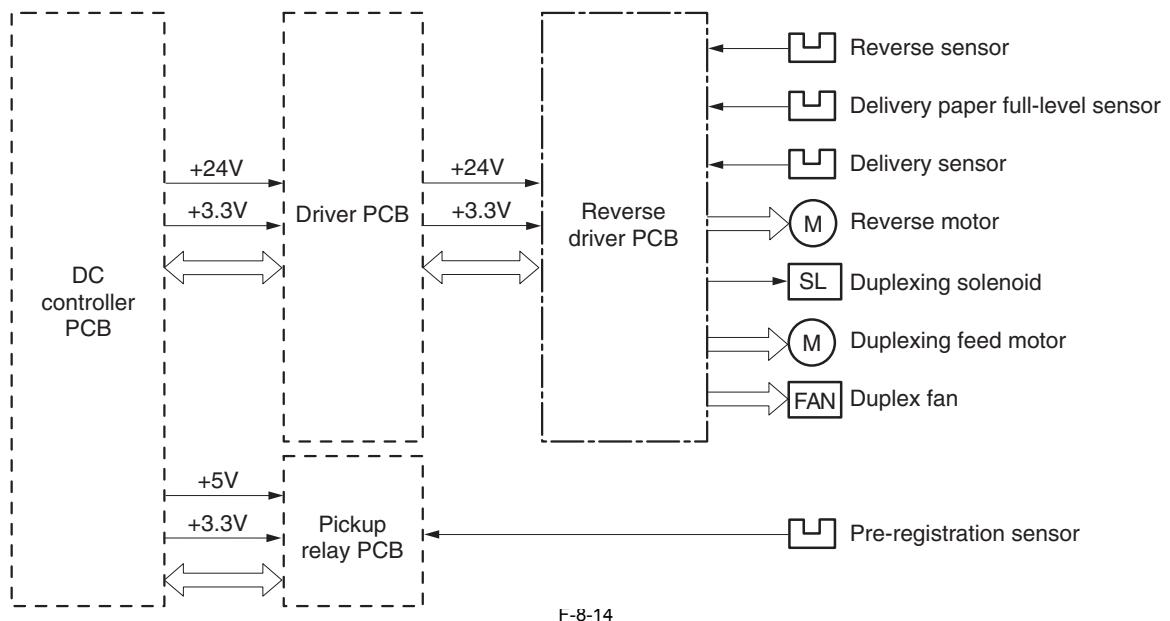

When delivery is performed, the paper is transported to the delivery tray. When duplexing printing is performed, the paper is sent to the duplexing feed assembly where transfer and fixing are performed for the second side.

The duplexing feed assembly corrects paper skew and the position to start writing an image in the main scanning direction for the second side.

F-8-13

The reverse driver PCB controls the operational sequence of the reverse assembly and duplexing feed assembly using an 8-bit CPU (IC801).
The reverse driver PCB performs serial communication with the DC controller. It drives each load according to the signal sent from the DC controller.

F-8-14

8.4.2 Duplexing Feed Control

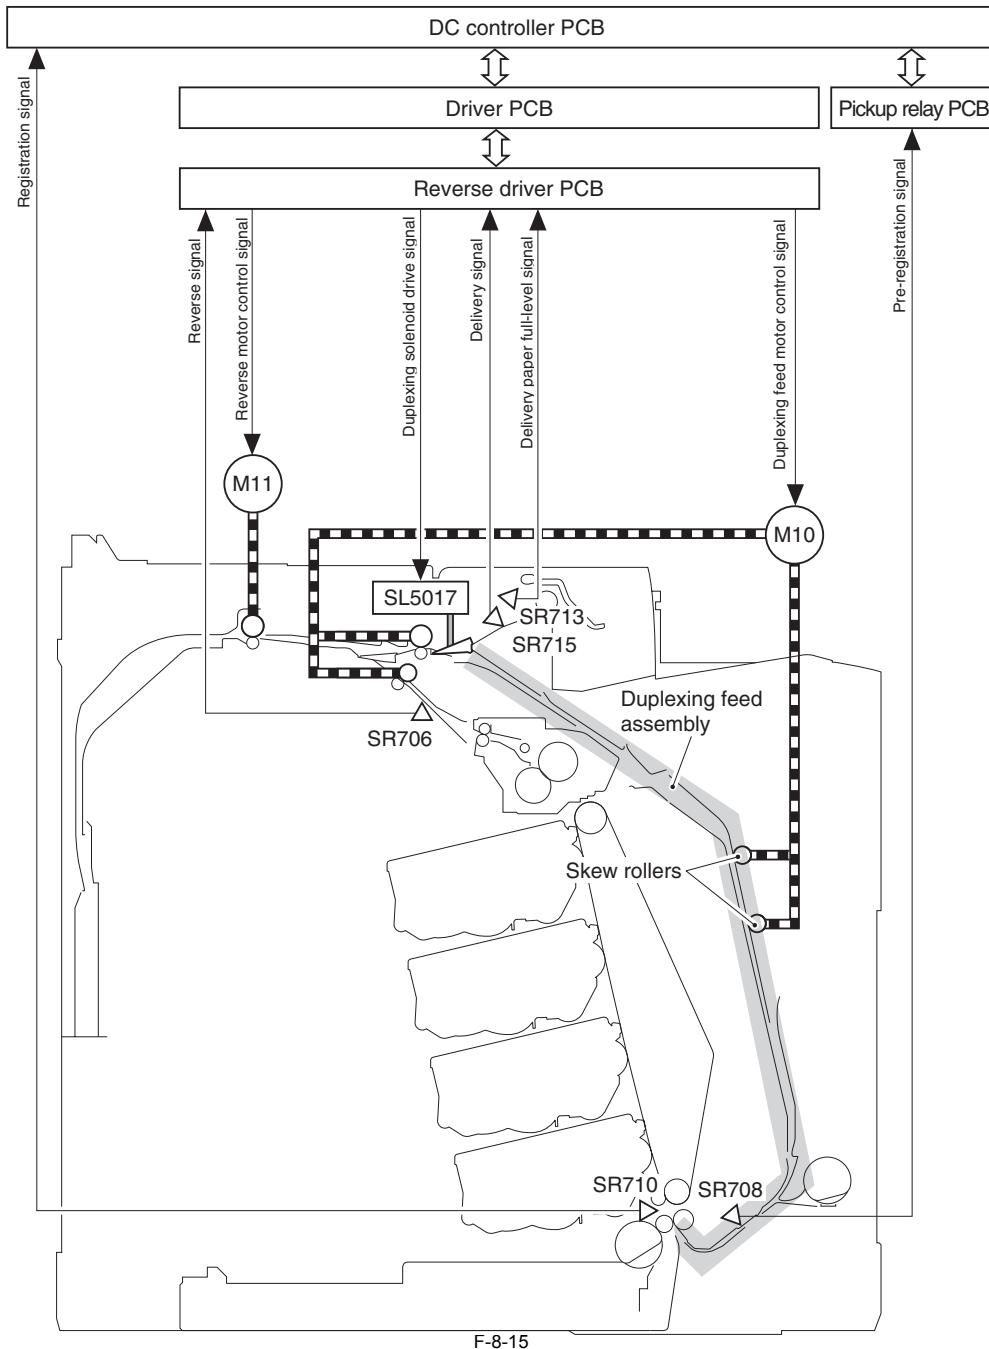

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In duplexing printing, the machine reverses the paper printed on the first side and again transports it to the pickup position to print the second side.

Paper reverse is driven by the reverse motor (M11) and duplexing solenoid (SL5017).

The duplexing feed assembly feeds the paper by rotating two skew rollers by the duplexing feed motor (M10).

When the registration sensor (SR710) detects the lead edge of the paper, it sends a signal to the DC controller. The reverse driver PCB detects whether the paper has been transported to the pickup position or not by monitoring the signal.

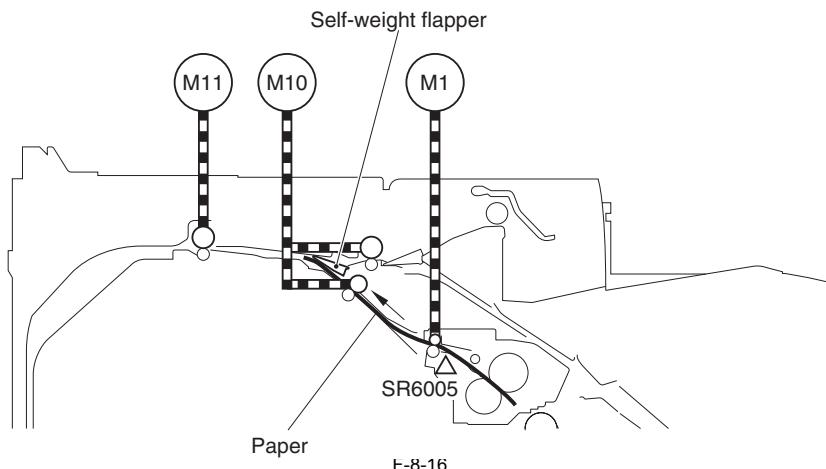

F-8-15

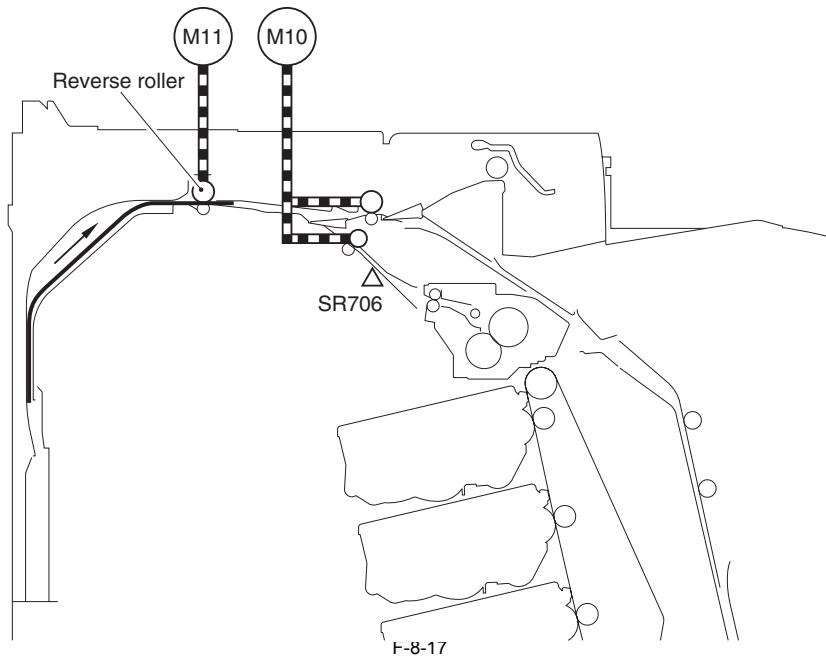

M10:	Duplexing feed motor	SR708:	Pre-registration sensor
M11:	Reverse motor	SR710:	Registration sensor
SL5017:	Duplexing solenoid	SR713:	Delivery paper full-level sensor
SR706:	Reverse sensor	SR715:	Delivery sensor

Duplexing feed sequence

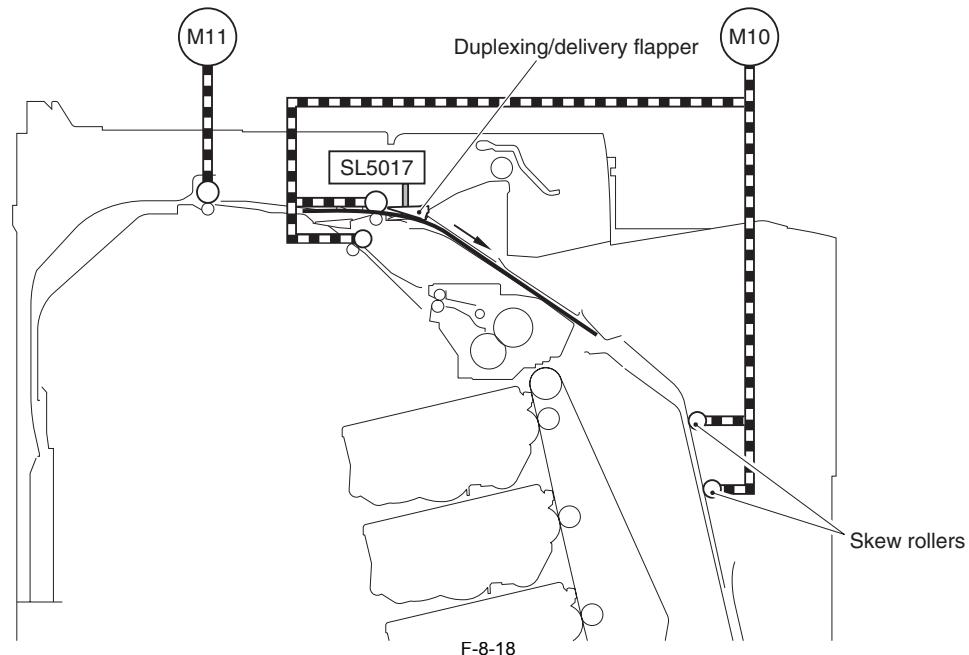

- 1) The feed roller driven by the fixing motor (M1) delivers the paper in which fixing was performed on the first side from the fixing unit.
- 2) When a specified period of time elapses after the fixing delivery sensor (SR6005) detects the lead edge of the paper, the duplexing feed motor (M10) and the reverse motor (M11) rotate forward.
The paper moves to the reverse assembly while pressing up the self-weight flapper.

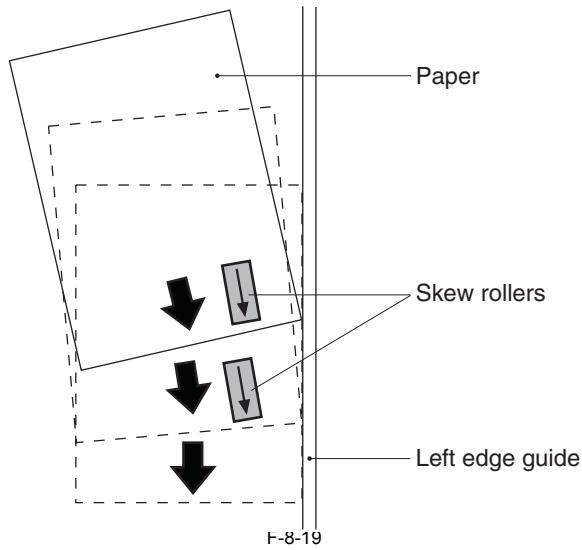

- 3) When a specified period of time elapses after the reverse sensor (SR706) detects the lead edge of the paper, the reverse motor (M11) stops.
This specified period of time varies depending on the paper length.
The paper which passed through the reverse roller before the reverse motor stops is temporarily stored at the back of the machine.
- 4) The reverse motor rotates in reverse.
When the reverse motor rotates in reverse, the paper is transported to the opposite direction.

- 5) When a specified period of time elapses after the reverse motor rotates in reverse, the duplexing solenoid (SL5017) is turned ON.
 When the duplexing/delivery flapper moves up, the feed path toward the duplexing feed assembly is secured. The paper is transported through the duplexing feed assembly.

- 6) The paper is transported while being pressed to the left edge guide when it is transported by the skew roller of the duplexing feed assembly.
 During this operation, the paper skew and horizontal registration of the second side is corrected.

- 7) When a specified period of time elapses after the pre-registration sensor (SR708) detects the lead edge of the paper, the duplexing feed motor stops.
 This specified period varies depending on the paper length.
 The paper stops at the re-pickup position.
 8) The main controller sends the print command for the second side to the DC controller.
 9) The DC controller drives the pickup motor (M4) at the timing when duplexing re-pickup can be performed.
 The paper skew is corrected by the registration shutter, and the paper is transported to the ETB unit.
 10) After the above-mentioned procedures, the machine delivers the paper to the delivery tray, following the procedure of delivery operation.
 In this condition, the duplexing/delivery flapper is turned down, so the feed path toward the duplexing feed assembly is closed.

8.4.3 Duplexing Pickup Operation

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine performs three types of duplexing printing operation depending on the paper size and printing mode.

- Single sheet mode: Duplexing print operation of a sheet at one by one
- Dual sheet mode: Duplexing print operation of two sheets at once
- Alternating complex mode: Duplexing print operation in the condition where three sheets remain in the machine

T-8-10

Paper size	Duplexing print operation
A4/LTR	Single sheet mode Dual sheet mode Alternating complex mode
Legal	Single sheet mode

Each duplexing print operation can be specified by the main controller.

However, duplexing print operation cannot be specified for the cases other than the printable paper size (A4, LTR, and legal) and the specified print mode (Plain paper, Thick paper 1, Gloss paper 1) for duplexing printing.

8.5 Parts Replacement Procedure

8.5.1 Pickup Feed Unit

8.5.1.1 Before Removing the Pickup Feed Unit

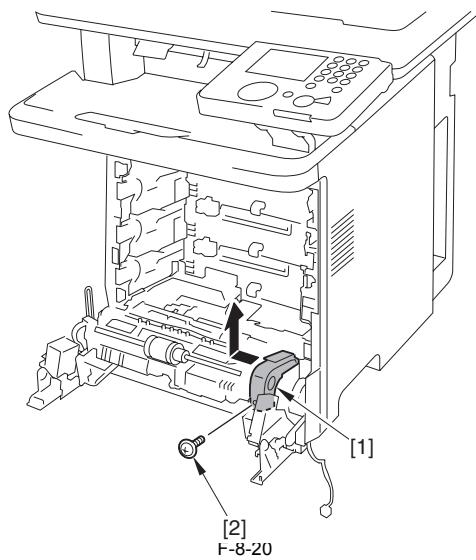

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 4) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]
- 5) Remove the Front Cover Unit.[\(page 10-9\)](#)Reference [Removing the Front Cover Unit]

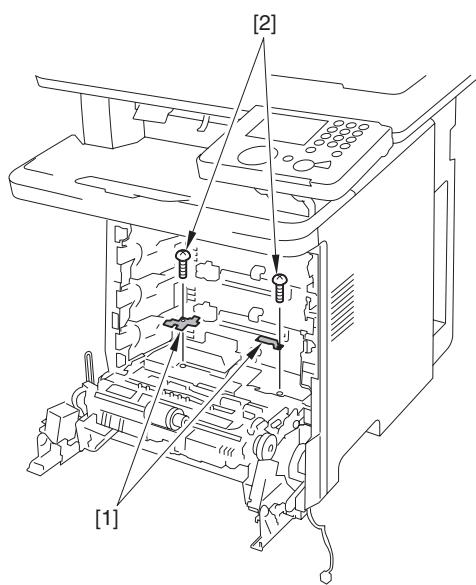

8.5.1.2 Removing the Pickup Feed Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

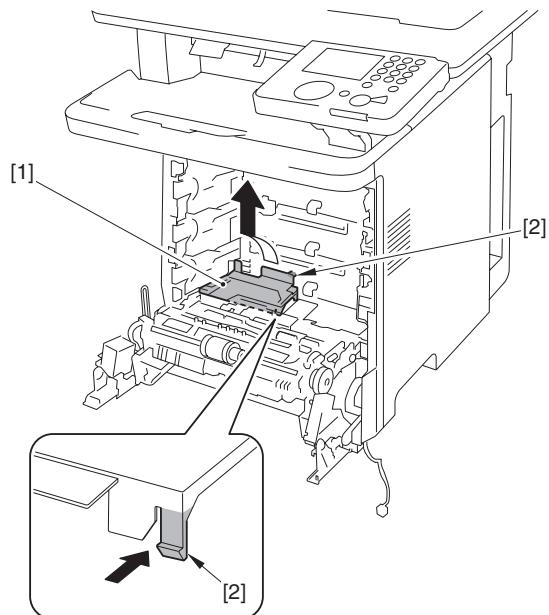

- 1) Remove the cover [1].
- 1 screw [2]

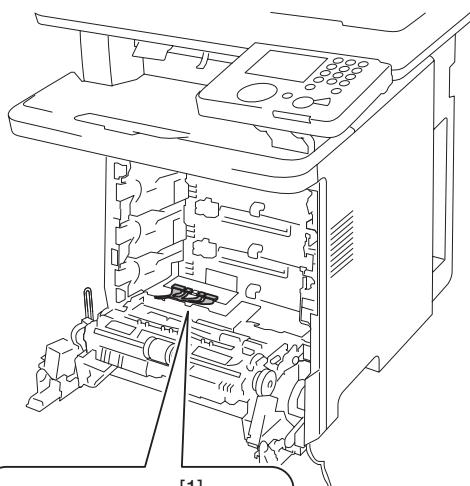

- 2) Remove the 2 plates [1]
- 2 screws [2]

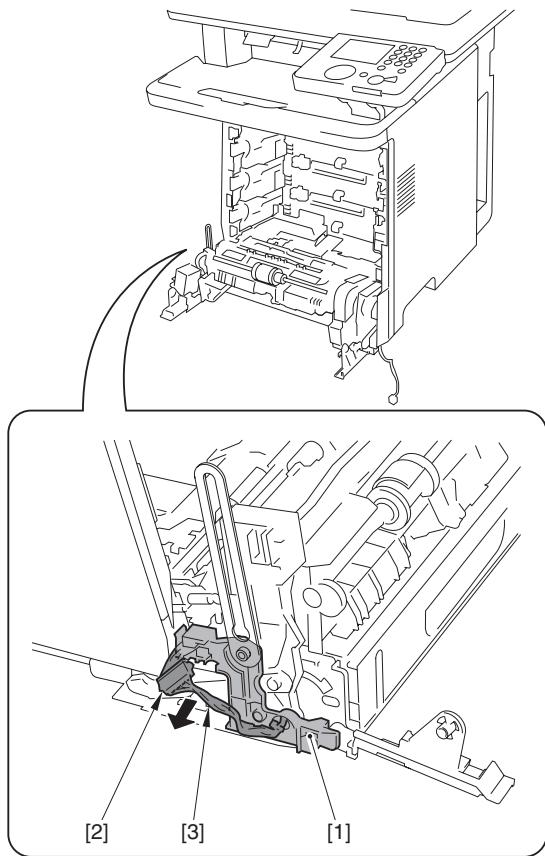

- 3) Remove the PCB cover [1]
- 2 claws [2]

- 4) Disconnect the 4 connectors [1].

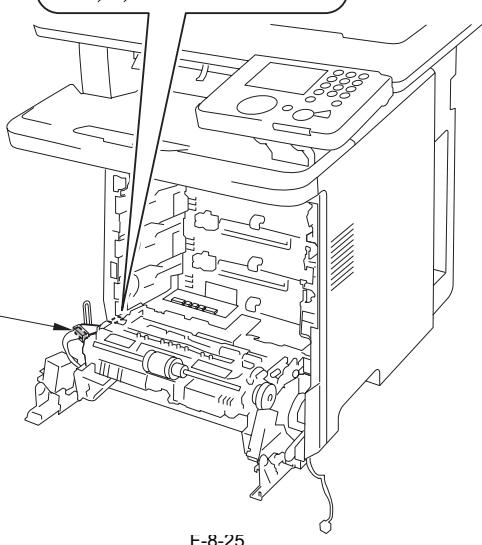

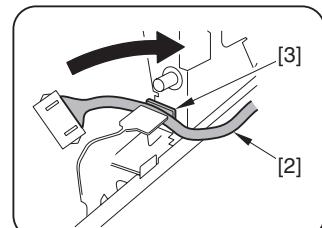

- 5) Remove the relay connector [2] and the harness [3] from the harness guide [1].

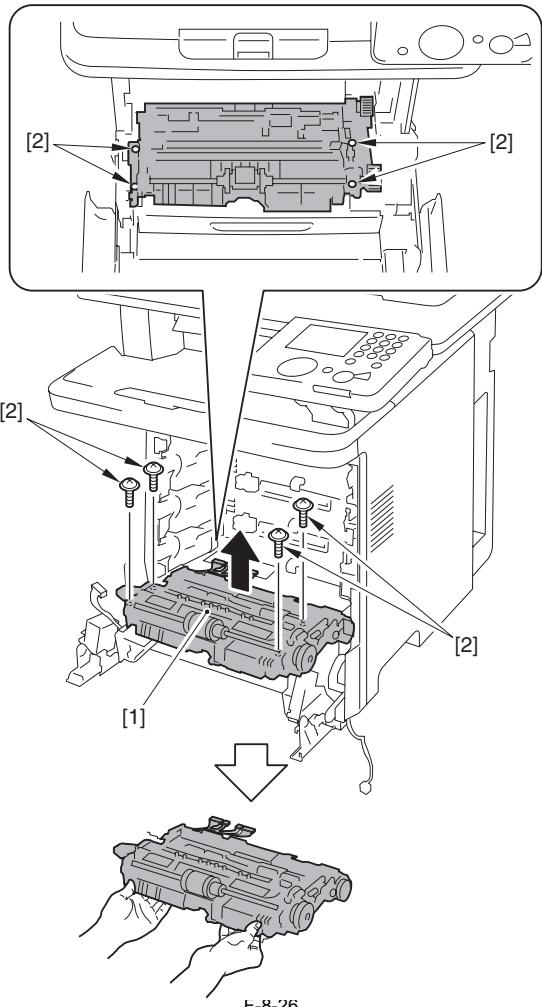

F-8-24

- 6) Disconnect the connector [1] and free the harness [2] from the harness guide [3].

F-8-25

- 7) Remove the pickup feed unit [1].
- 4 screws [2]

F-8-26

8.5.2 Cassette Pickup Roller

8.5.2.1 Before Removing the Cassette Pickup Roller

8.5.10.2 Removing the Reversal Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

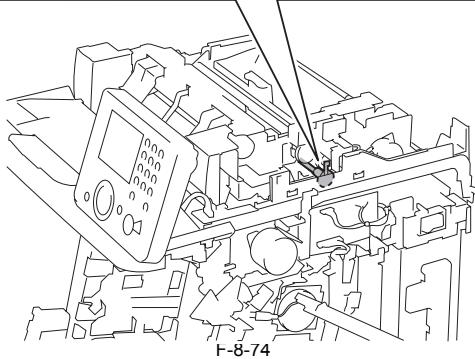

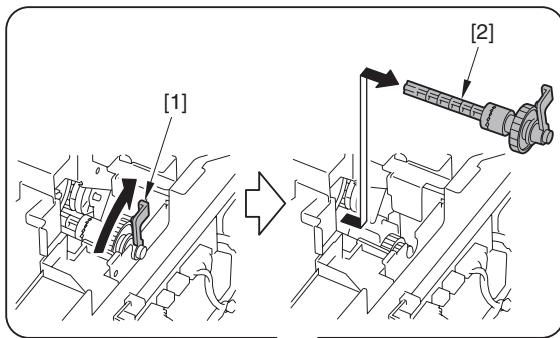

⚠ Points to Note At Installation

Unless the reverse guide is installed correctly, a jam may occur. Make sure that the reverse guide is installed in the host machine correctly, following the procedure indicated below. If it is not installed correctly, uninstall it and then install it again.

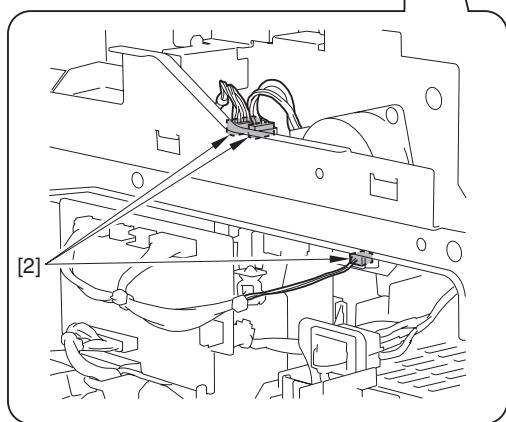

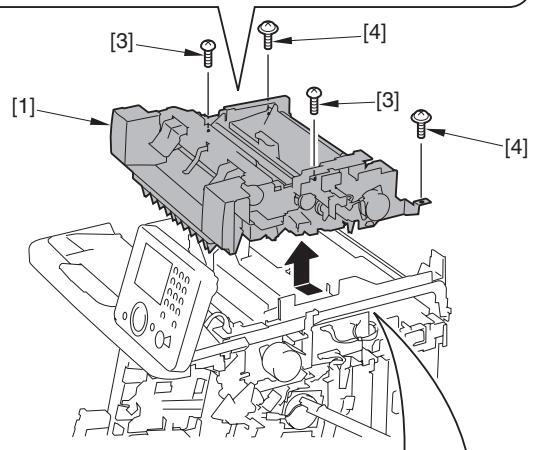

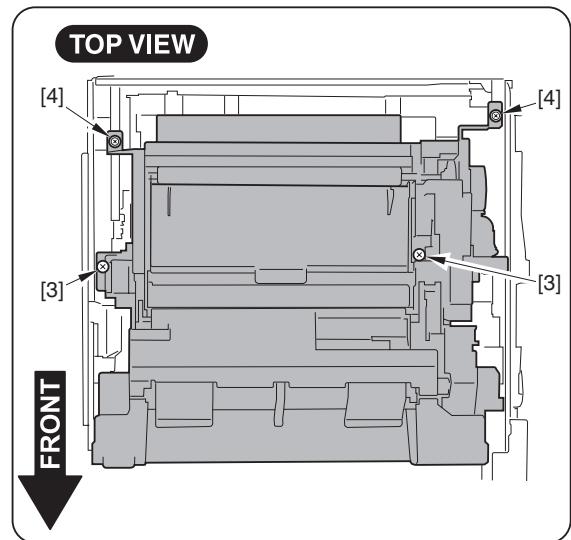

- When not installed correctly
The reverse roller surface [3] is visible in a gap between the reverse guide [1] and the cover [2] of the reverse unit.
- When installed correctly
The roller surface [3] is hidden by the reverse guide [1] and is not visible.

- 2) Turn the lever [1] in the direction of the arrow to remove the gear unit [2].

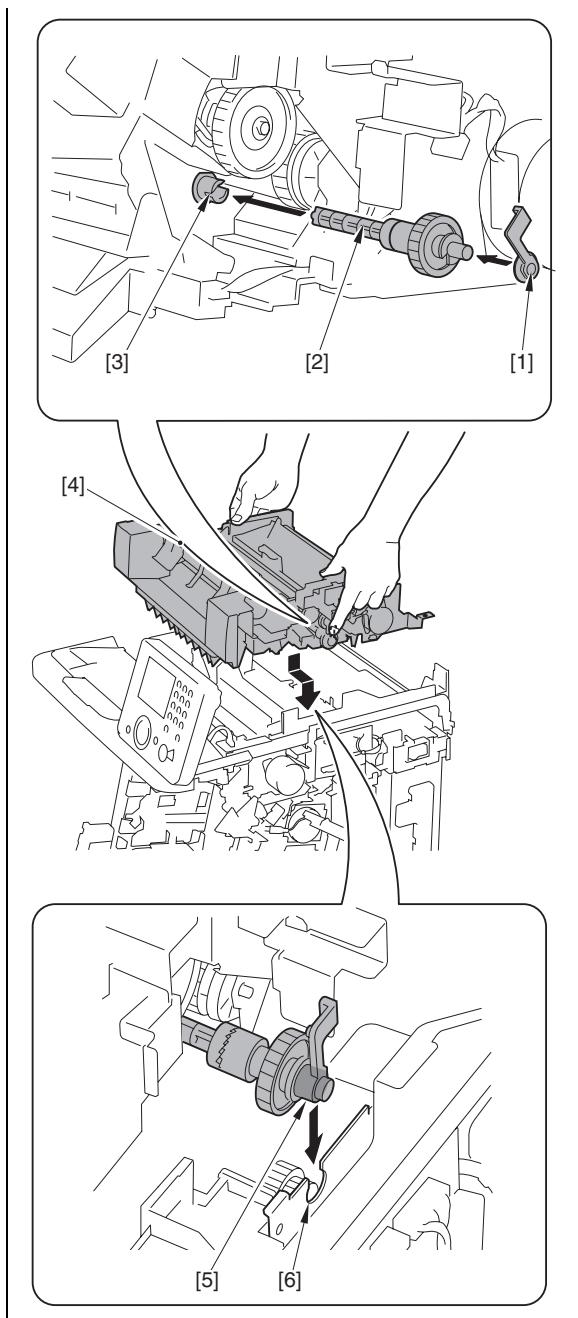

- 3) Remove the reversal unit [1].
 - 3 connectors [2]
 - 2 connectors (binding) [3]
 - 2 screws [4]

F-8-75

 Points to Note at Installation

- Before installing the reverse unit [1] to the host machine, be sure to align the gear unit [2] with the coupling [3] of the reverse unit.
- The gear unit [2] is easily detached from the coupling [3]. So, be sure to keep pushing the gear unit [2] when installing the reverse unit [1] to the host machine.

8.5.11 Reverse Motor

8.5.11.1 Before Removing the Reversal Motor

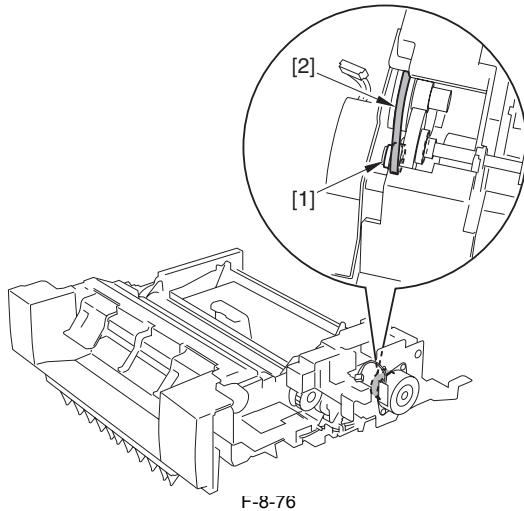

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the fixing assembly.[\(page 9-6\)](#)Reference [Removing the Fixing Assembly]
- 3) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 4) Remove the ADF Unit + Reader Unit.[\(page 4-8\)](#)Reference [Removing the ADF Unit + Reader Unit]
- 5) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 6) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]
- 7) Remove the Upper Frame Unit.[\(page 10-18\)](#)Reference [Removing the Upper Frame Unit]
- 8) Remove the Reversal Unit.[\(page 8-28\)](#)Reference [Removing the Reversal Unit]

8.5.11.2 Removing the Reversal Motor

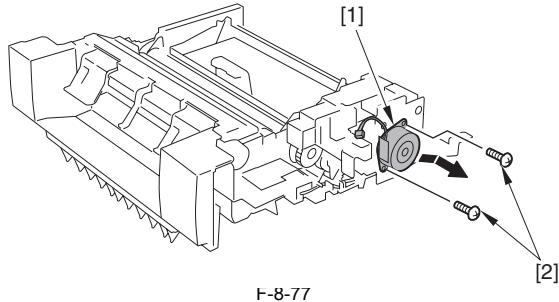

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the belt [2] from the motor gear [1].

- 2) Remove the reversal motor [1].

- 2 screws [2]

8.5.12 Reverse Solenoid

8.5.12.1 Before Removing the Reversal Solenoid

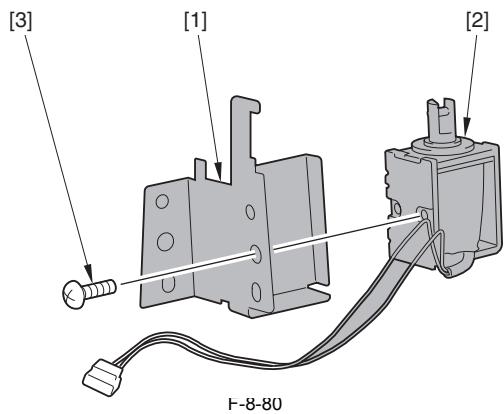

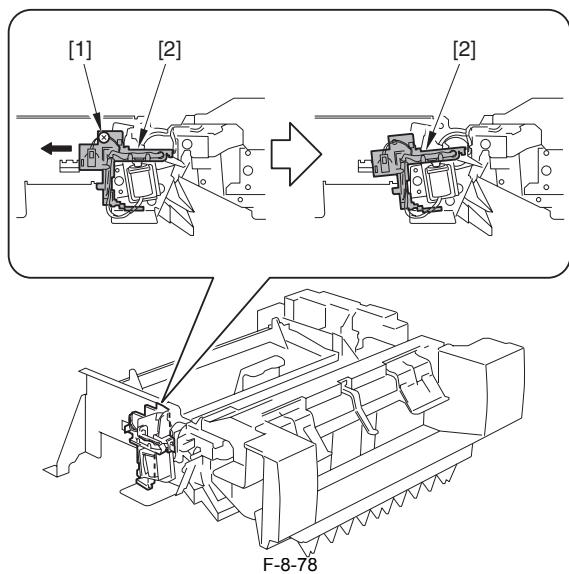

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the fixing assembly.[\(page 9-6\)](#)Reference [Removing the Fixing Assembly]
- 3) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 4) Remove the ADF Unit + Reader Unit.[\(page 4-8\)](#)Reference [Removing the ADF Unit + Reader Unit]
- 5) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 6) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]
- 7) Remove the Upper Frame Unit.[\(page 10-18\)](#)Reference [Removing the Upper Frame Unit]
- 8) Remove the Reversal Unit.[\(page 8-28\)](#)Reference [Removing the Reversal Unit]

8.5.12.2 Removing the Reversal Solenoid

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the screw [1] to move the harness guide [2] in the direction of the arrow.

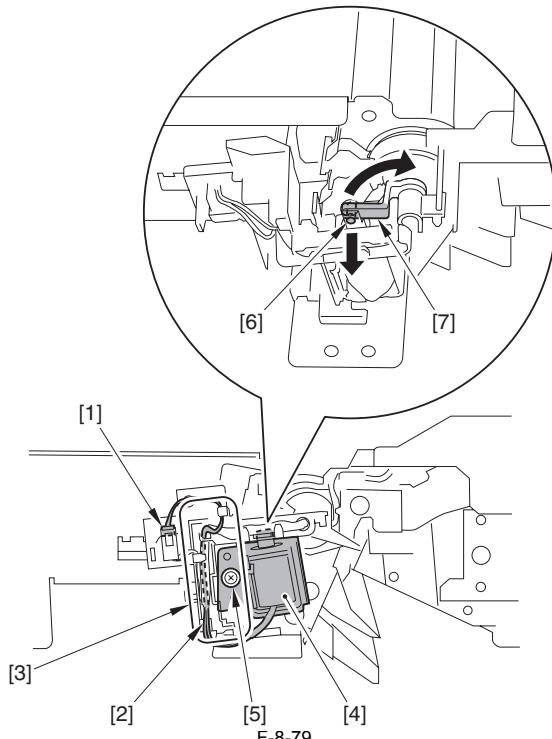

F-8-78

F-8-80

- 2) Disconnect the connector [1] and free the harness [2] from the guide [3].
 3) Remove the reversal solenoid unit [4].

- 1 screw [5]
- 1 solenoid pin [6]
- 1 solenoid arm [7]

- 4) Remove the reversal solenoid [2] from the fixing plate [1].

- 1 screw [3]

9.1 Overview/Configuration

9.1.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The ceramic heater fixing method is adopted on the fixing assembly of this machine.

Temperature control of the fixing assembly is performed by the fixing control circuit and the fixing heater safety circuit according to the commands from CPU (IC1001) on DC controller PCB.

Fixing heater (H1)

A ceramic heater for heating the fixing sleeve. The heater has one piece of U-shaped heating element that practically works as 2 heaters.

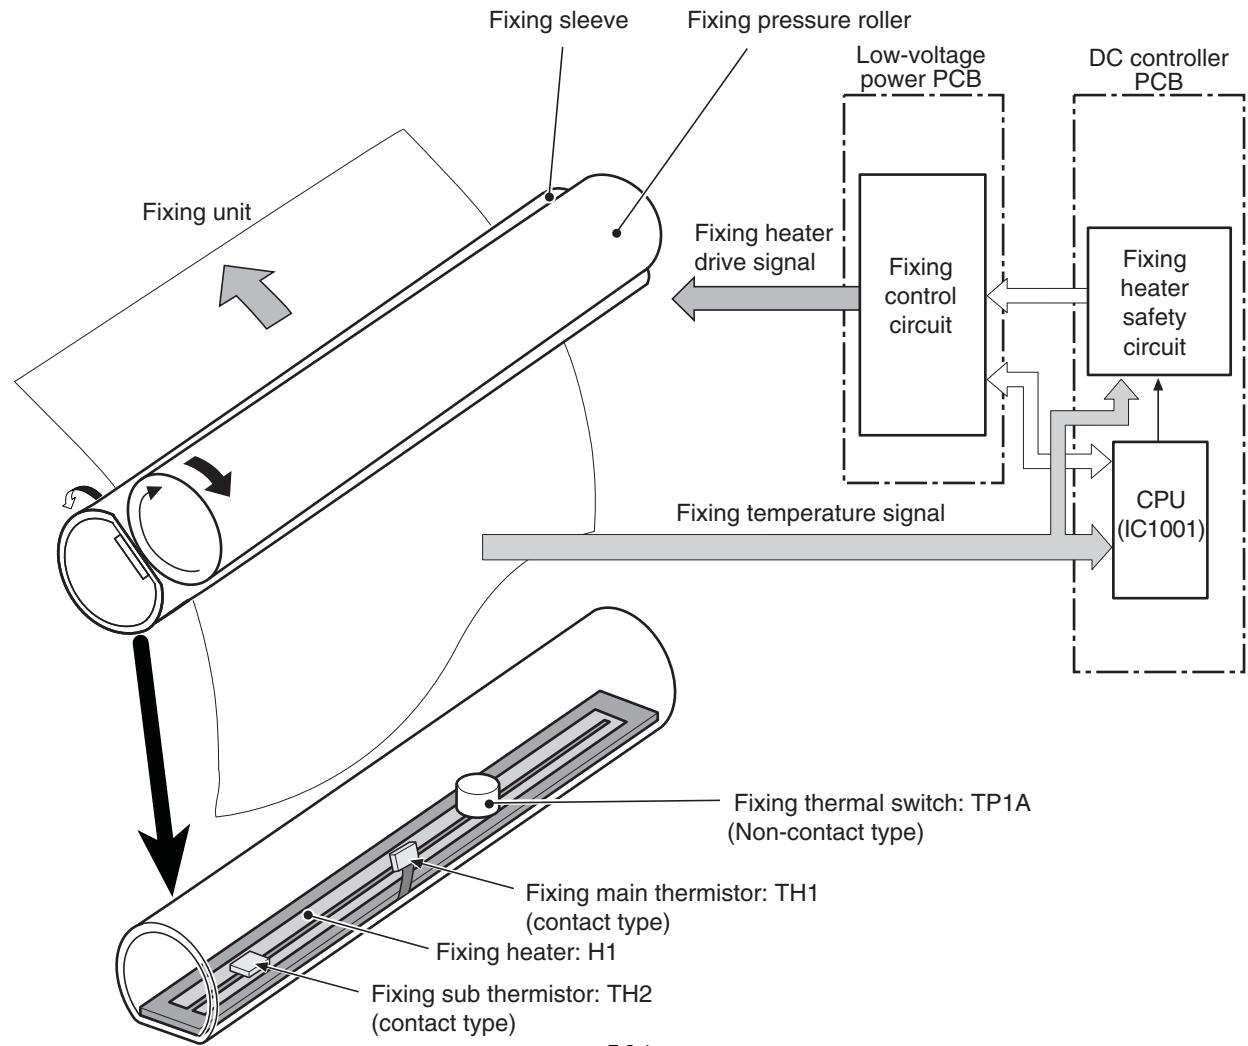

Thermistors (TH1, TH2)

Thermistors for detecting the fixing temperature. The following 2 types are used.

- Fixing main thermistor (TH1): contact type thermistor for detecting the fixing sleeve temperature that is located at the center inside the fixing sleeve.
- Fixing sub thermistor (TH2): contact type thermistor for detecting the fixing heater temperature that is located at the left edge of the fixing heater.

Fixing thermal switch (TP1A)

Non-contact type thermal switch for preventing the fixing heater from overheating that is located at the center of the fixing heater. When the fixing heater overheats, the contact point opens and power to the fixing heater is cut.

F-9-1

9.2 Various Control Mechanisms

9.2.1 Controlling the Temperature of the Fixing Unit

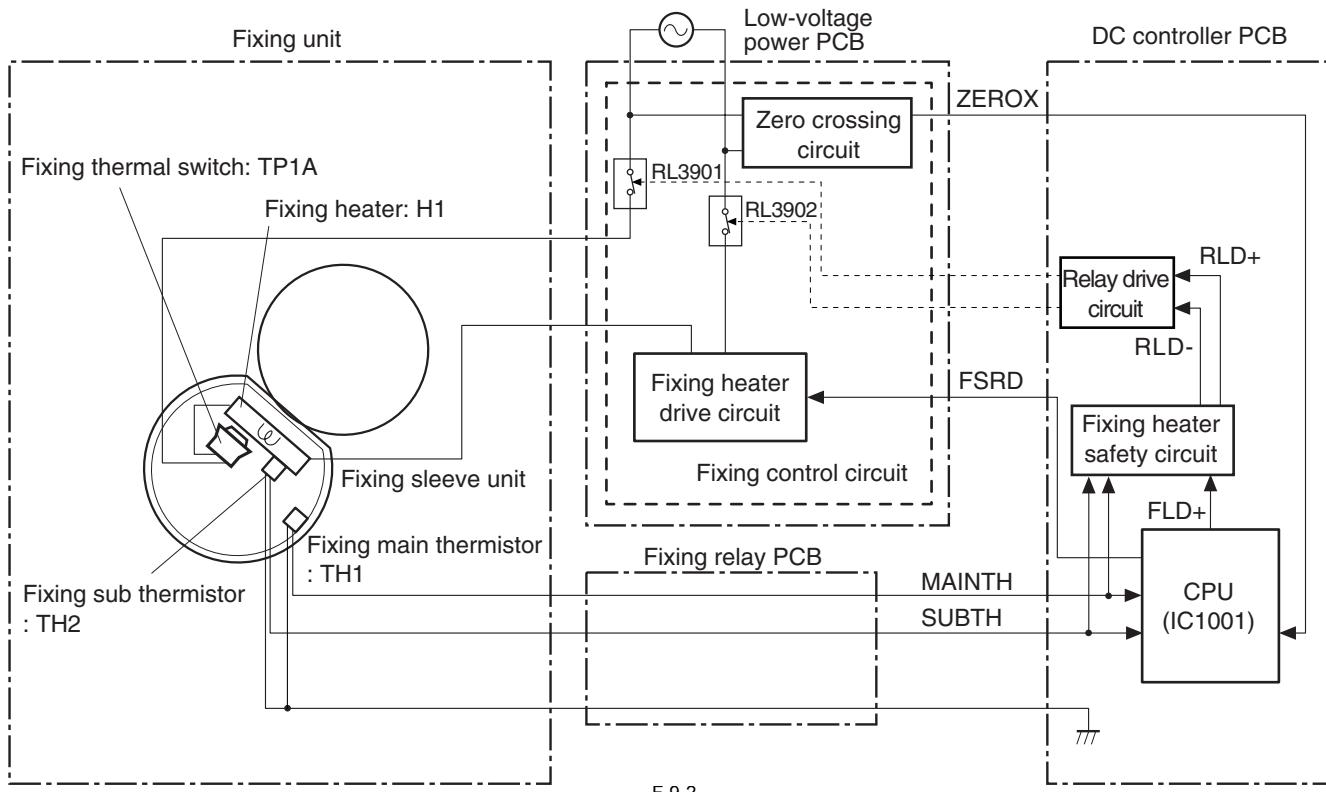

9.2.1.1 Fixing Temperature Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The fixing temperature control is to detect the surface temperature of the fixing sleeve and the fixing heater, and to maintain the fixing heater temperature at targeted value according to the detected results.

The fixing sleeve temperature is monitored by the fixing main thermistor (TH1) and the fixing heater temperature is monitored by the fixing sub thermistor (TH2). Results are output to the DC controller as the fixing temperature detection signal (MAINTH, SUBTH). CPU (IC1001) on the DC controller PCB monitors the voltage of the fixing temperature detection signals and outputs the fixing heater drive signal (FSRD) to the fixing control circuit based on the voltage value.

The fixing control circuit controls the fixing temperature based on the fixing heater drive signal so that the heater can be maintained at the targeted temperature.

F-9-2

The fixing temperature controls are divided into the following 4 types.

Initial rotation temperature control

CPU firstly turns ON the fixing heater for a specified period at power-ON and then, drives the fixing motor.

In a low temperature status such as at initial operation, the fixing sleeve may get damaged when the paper is fed because the grease inside the fixing sleeve is not yet smooth enough.

This control is to melt the grease inside the fixing sleeve by heating the fixing heater before the fixing motor drives and to lubricate the sleeve in order to prevent the fixing sleeve from being damaged.

Fixing sub thermistor (TH2) is used to detect the temperature.

Start-up temperature control

CPU heats the fixing heater to the start-up temperature in order to warm the fixing assembly up to the required temperature for fixing.

The start-up temperature varies depending on the elapsed time since previous print completion, paper types, and environments.

Fixing sub thermistor (TH2) is used to detect the temperature.

Print temperature control

CPU maintains the temperature of the fixing sleeve at its targeted temperature during print operation.

CPU gradually switches the target temperature in one printing process depending on the number of print. The targeted temperature varies depending on the paper types.

The fixing main thermistor (TH1) is used to detect the temperature.

Between-sheets temperature control

At the continuous printing in low-speed mode, the pressure roller may be overheating between sheets.

CPU reduces the temperature of hexing heater below the normal fixing temperature between sheets. The targeted temperature varies according to the between-sheets intervals and the paper types.

The fixing main thermistor (TH1) is used to detect the temperature.

9.2.1.2 Throughput Down Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

This control is to prevent an overheating at both ends of the fixing sleeve by keeping the required speed for paper feeding and, in addition, extending the pickup interval.

At continuous printing with the paper width narrower than A4 size (210 mm), the end of fixing sleeve may overheat.

If no paper is detected by the paper displacement sensor (SR714) on the registration roller at paper feed and, in addition, a detected temperature by the fixing sub thermistor (TH2) exceeds the specified temperature, it is considered that either universal size paper or narrower width paper than A4 size is fed.

In this case, DC controller performs the throughput down control step-by-step according to the detected temperature by the fixing sub thermistor.

When the detected temperature is 250 deg C or higher, the controller extends the pickup interval by keeping the paper feed speed to lower the throughput. The sheet interval gets longer, the fixing sleeve temperature becomes lower.

Firstly, 1st additional interval is added to the default pickup interval followed by paper feed.

If after 1st additional interval, the sub-thermistor again detects temperature of 250 deg C or higher and there is no change in the paper interval after five sheets, 2nd additional interval is added. The 3rd and 4th intervals are added similarly.

T-9-1

Fixing sub thermistor temperature	Additional intervals (sec)			
	1st	2nd	3rd	4th
250 deg C	+2	+6	+10	+14
260 deg C	+6	+10	+14	+18
270 deg C	+10	+14	+18	+22

When the fixing sub thermistor detects the temperature below 90 deg C for 2.5 sec or more after the throughput down control, throughput down control is canceled.

9.2.2 Fixing Pressurizing/Release Control

9.2.2.1 Fixing Sleeve Pressuring/releasing Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

This machine controls the pressure between the fixing sleeve and the fixing pressure roller as needed to prevent the fixing failure and the breakdown of fixing assembly (see MEMO).

Pressuring/releasing of the fixing sleeve is performed by the fixing motor (M1). When the pressure spring pushes the pressure arm, the pressure is applied on the fixing film. When the fixing motor rotates reversely, the fixing pressure release cam pushes the pressure arm and the pressure on the fixing film is reduced. The pressuring/releasing status of fixing sleeve has following 3 conditions depending on the position of the fixing pressure releasing cam.

- Pressurized condition (home position)

Fixing film is pushed by the pressure roller.

This condition is called at power-ON, the front cover closed and the cancel of sleep condition.

- Released condition

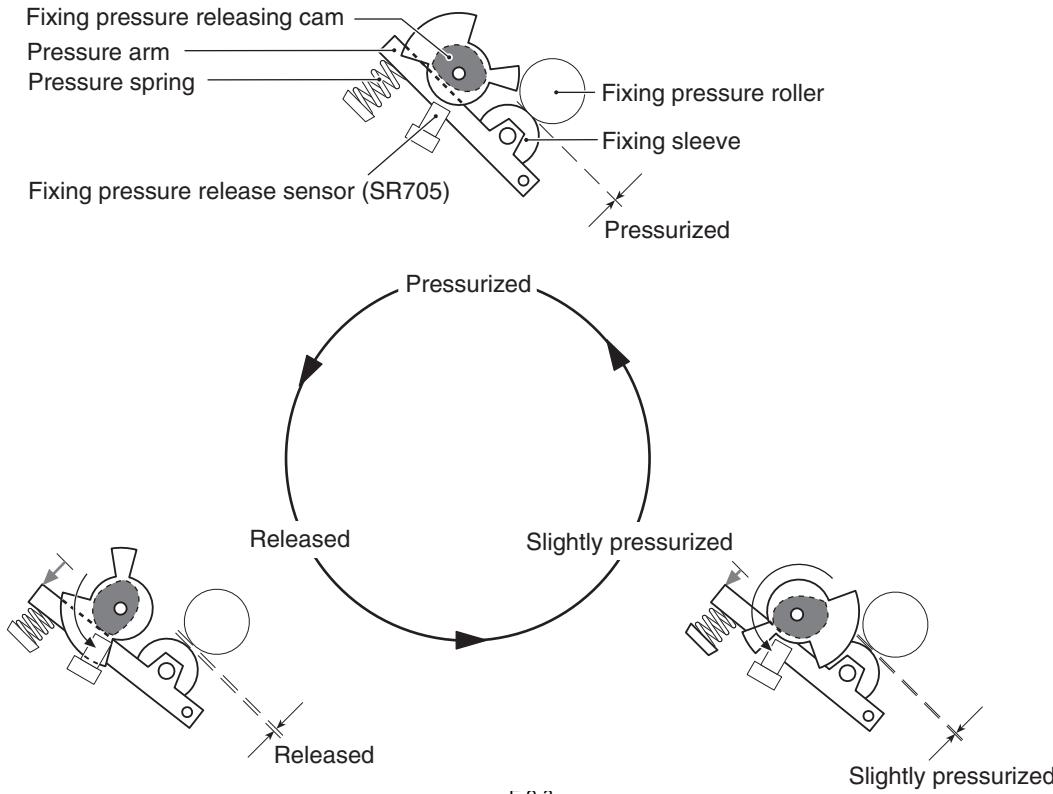

The fixing film is disengaged with the pressure roller.

This condition is called at power-OFF, JAM occurrence and the entry of sleep mode.

- Slightly pressurized condition

The fixing film is pushed slightly by the pressure roller.

This condition is called at printing envelope.

The pressuring/releasing status of the fixing sleeve is identified by ON/OFF status of the fixing pressure release sensor (SR705) and the rotation period of the fixing motor (M1).

MEMO:

If pulling out jam paper with fixing sleeve pressured, the fixing sleeve may get damaged. In addition, if the pressurized condition continues for a long time, a mark may remain on the nip of the fixing sleeve.

To prevent those, there is a mechanism for releasing the fixing sleeve pressure.

Error Codes:

E840 Error in pressure release mechanism

When the pressure control is commanded, if the pressurized condition (home position) cannot be detected after 2.5 sec, the machine stops and an error code is displayed on a control panel.

Error in no fixing assembly

When the pressure control is commanded, if the pressure release sensor (SR705) is not turned ON after 2.5 sec, the machine stops and a message indicating the absence of the fixing assembly is displayed.

9.3 Protection Function

9.3.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

This machine has the 3 types of protective functions for fixing assembly.

If an overheating is detected at the fixing assembly, those protective functions stop the power to the fixing heater.

Protective function by CPU

If the voltage of the fixing main thermistor temperature detection signal (MAINTH) is approx. 1.26 V or lower (equivalent to 240 deg C or higher), or the voltage of the fixing sub thermistor temperature detection signal (SUBTH) is approx. 0.48 V or lower (equivalent to 280 deg C or higher), the CPU determines the fixing assembly failure and performs the following processing.

- 1) CPU stops output the fixing heater drive signal (FSRD) and turns the heater OFF.
- 2) CPU stops output the fixing sub thermistor relay signal (RLD+).
- 3) The relay drive circuit releases the relays (RL3901 and RL3902) to stop power to the fixing heater.

Protective function by fixing heater safety circuit

If the voltage of the fixing main thermistor temperature detection signal (MAINTH) is 1.15 V or lower (equivalent to 250 deg C or higher), or the voltage of the fixing sub thermistor temperature detection signal (SUBTH) is approx. 0.44 V or lower (equivalent to 290 deg C or higher), the fixing heater safety circuit determines the fixing assembly failure and performs the following processing.

- 1) The circuit stops output the main thermistor relay drive (RLD-).
- 2) The circuit stops output the sub thermistor relay drive signal (RLD+).
- 3) The relay drive circuit releases the relays (RL3901 and RL3902) to stop the power to the fixing heater.

Protective function by thermal switch

When the fixing heater overheats and the detected temperature of the fixing thermal switch (TP1A) exceeds approx. 250 deg C, the fixing thermal switch breaks contact of the line and the power supply to the fixing heater is immediately cut off.

The actual temperature of the fixing heater is about 40 degrees higher than the detected temperature by the fixing thermal switch, as there are some space between the thermal switch and the fixing heater.

9.3.2 Failure Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

If any of the following conditions is true, CPU determines the fixing assembly failure. In this case, it stops the machine and displays an error code on a control panel.

Start-up failure (Warm-up failure)

If any of the followings is detected, CPU determines the start-up failure.

- If the detected temperature of the fixing sub thermistor does not reach 130 deg C within 40 seconds from energization to the fixing heater during wait period.
- If the fixing assembly does not enter ready within 40 seconds from energization to the fixing heater at print operation start.

Abnormal low temperature of fixing main thermistor

If any of the followings is detected, CPU determines the abnormal low temperature of the fixing main thermistor.

- If the detected temperature of the fixing main thermistor is kept below 40°C for 4 seconds continuously from energization of fixing heater until residual paper detection is completed during wait period.
- If the detected temperature of the fixing main thermistor is kept below 70 degC for 4 seconds continuously from energization of fixing heater until paper reaches the fixing assembly at the start of print operation.
- If the detected temperature of the fixing main thermistor is kept below 130 deg C for 0.5 second continuously from paper reaches the fixing unit until heater is turned OFF during print period.

Abnormal high temperature of fixing main thermistor

The CPU determines the abnormal high temperature of fixing main thermistor, if the detected temperature of the fixing main thermistor is kept 240 deg C or higher for 0.1 second.

Abnormal low temperature of sub thermistor

If any of the followings is detected, CPU determines the abnormal low temperature of the fixing sub thermistor.

- If the detected temperature of the fixing sub thermistor is kept below 60 deg C for 4 seconds continuously from energization of the fixing heater until residual paper detection is completed during wait period.
- If the detected temperature of the sub thermistor is kept below 90 deg C for 2.5 seconds continuously from energization of the fixing heater until paper reaches the fixing assembly at the start of print operation.
- If the detected temperature of the fixing sub thermistor is kept below 120 deg C for 0.5 second continuously, from paper reaches the fixing assembly until heater is turned OFF during print period.
- If the detected temperature of fixing sub thermistor is kept below 50 deg C for 5 seconds continuously during stand-by temperature control.

Abnormal high temperature of fixing sub thermistor

The CPU determines the abnormal high temperature of fixing sub thermistor, if the detected temperature of the fixing sub thermistor is kept 280 deg C or higher continuously for 0.5 second.

Drive circuit error

CPU determines the drive circuit error, if the zero crossing signal (ZEROX) is kept on being out of frequency range 40 Hz to 70 Hz for 5 seconds.

9.4 Parts Replacement Procedure

9.4.1 Fixing Unit

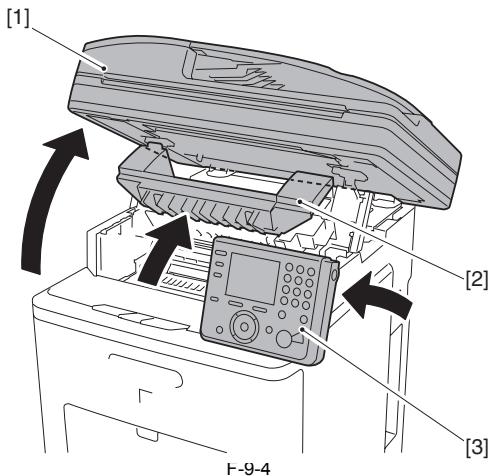

9.4.1.1 Removing the Fixing Assembly

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

⚠ Points to Note At Operation

When removing the fixing assembly, perform the operation after the fixing assembly is surely cooled. The fixing assembly just after printing may cause burn injury.

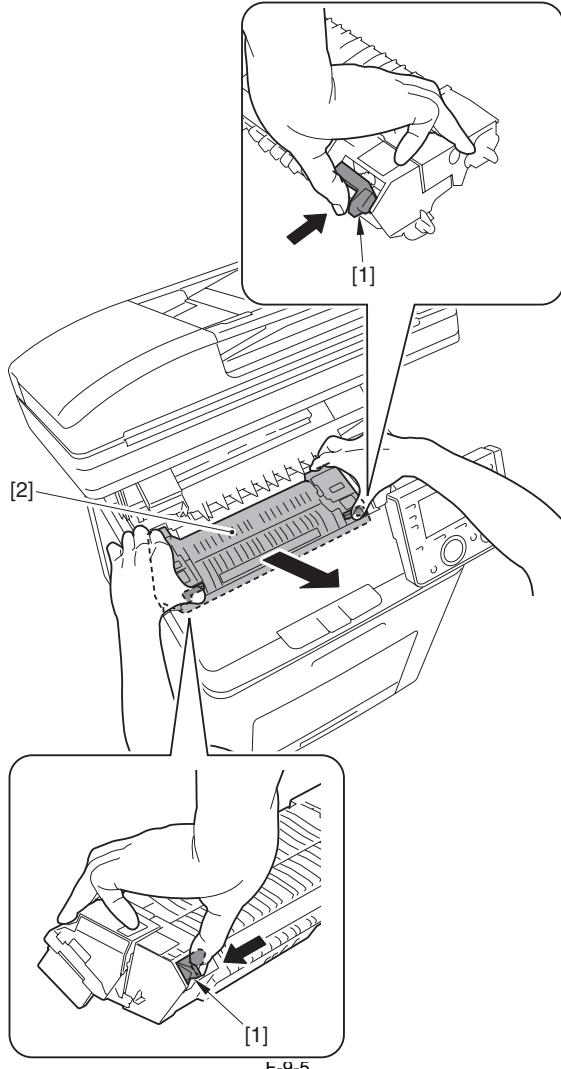

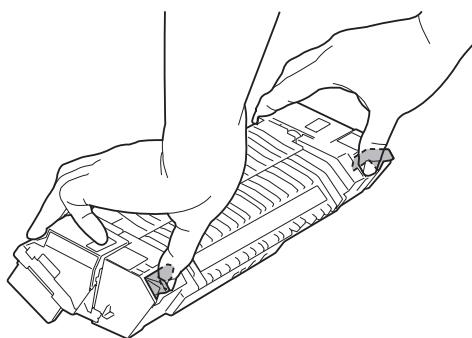

- 1) Open the ADF Unit + Reader Unit [1].
- 2) Open the fixing cover [2].
- 3) Raise the control panel unit[3] forward.

- 4) While pressing the fixing assembly lever [1] (2 points at left and right), remove the fixing assembly [2].

⚠ Points to Note When holding the fixing assembly

Be sure to hold the fixing assembly with three fingers or more when lifting the fixing assembly to prevent it from falling.

9.4.2 Fixing Sleeve Unit

9.4.2.1 Before Removing the Fixing Sleeve Unit

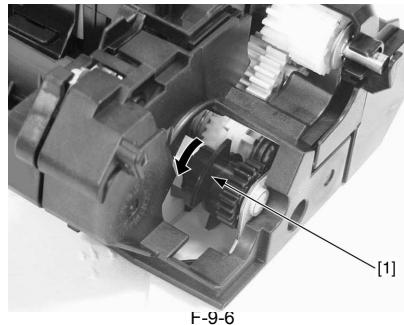

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

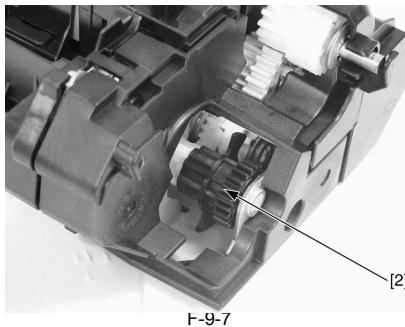

- 1) Remove the fixing assembly.([page 9-6](#))Reference [Removing the Fixing Assembly]

9.4.2.2 Removing the Fixing Sleeve Unit

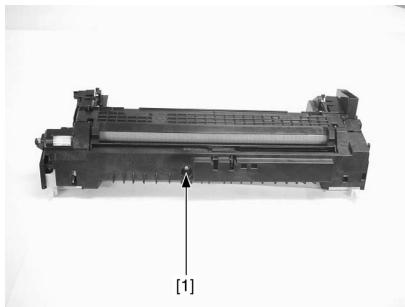

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Turn the gear [1] in the direction of the arrow to the position [2].

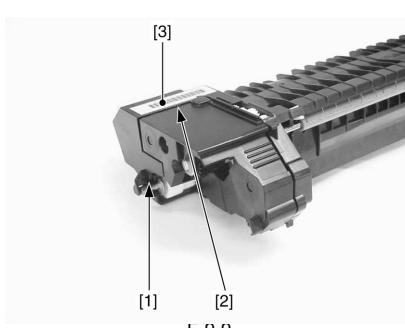

2) Remove the screw [1].

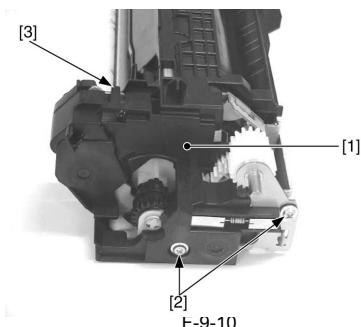

3) Remove the claw [1] and the claw [2] in the order, and remove the cover [3].

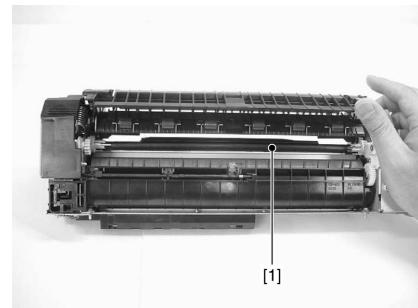

4) Remove the cover [1].

- 2 screws [2]
- 1 claw [3]

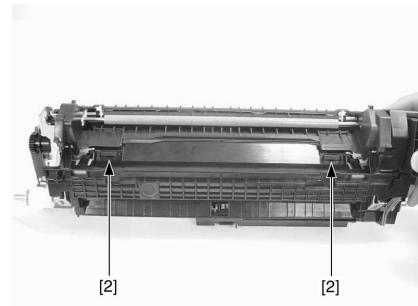

5) Remove the guide [1].

- 2 claws [2]

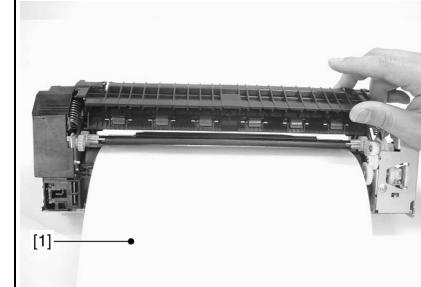

F-9-11

F-9-12

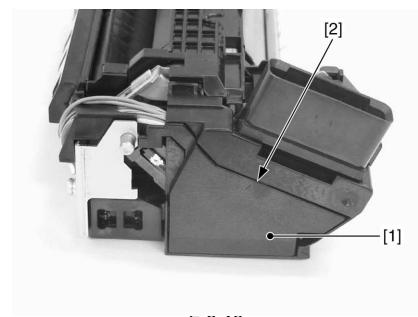

When removing the guide, be sure to set a protection sheet [1] around the fixing sleeve to prevent damage/scar.

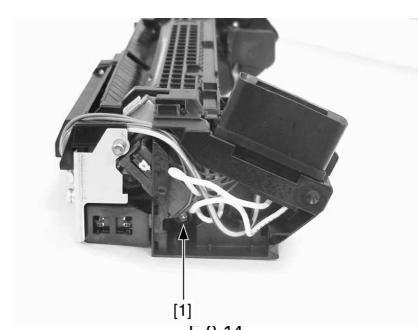

6) Remove the cover [1].

- 1 claw [2]

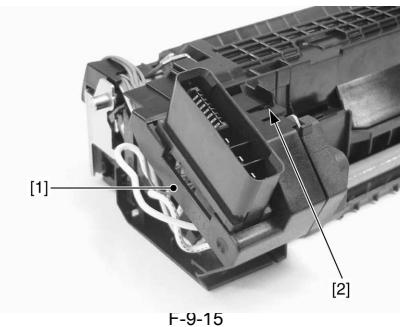

F-9-13

7) Remove the screw [1].

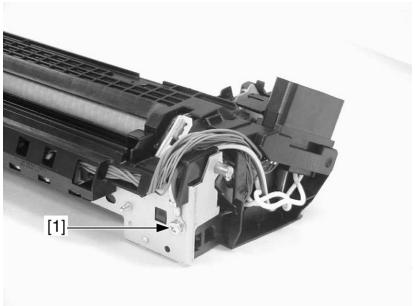

F-9-14

8) Remove the connector assembly [1].
 - 1 claw [2]

9) Remove the screw [1].

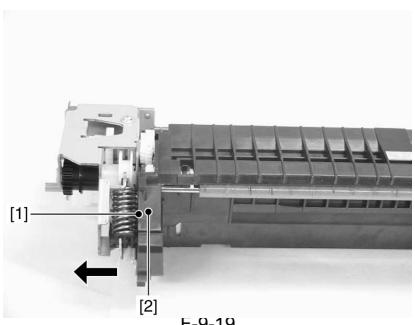

10) Remove the screw [1].

11) Remove the screw [1].

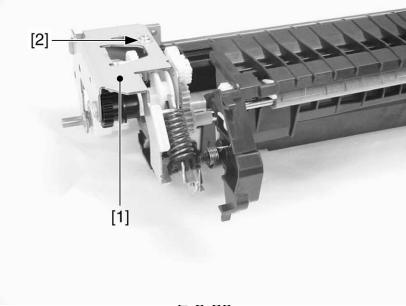

12) Slide the side plate [1] to remove the unit [2].

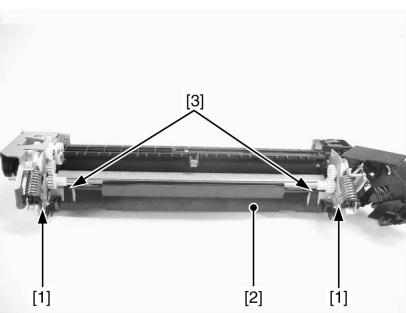

13) Remove the plate [1].

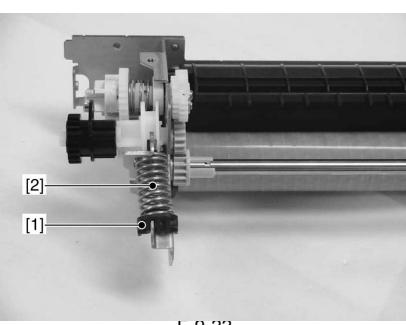

- 1 screw [2]

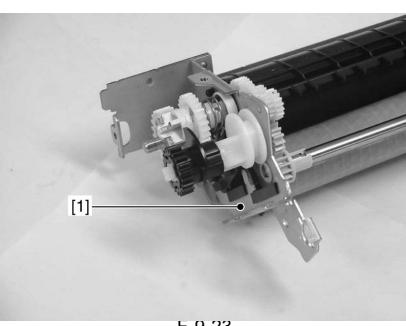

14) Remove the 2 parts of [1] from the side plate to remove the unit [2].
 - 2 claws [3]

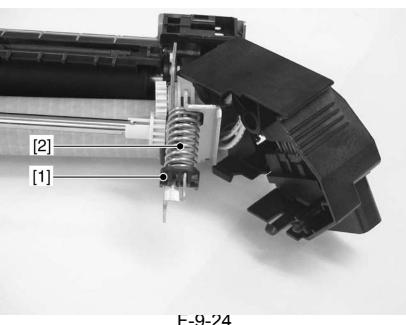

15) Remove the spring holder [1] to remove the spring [2].

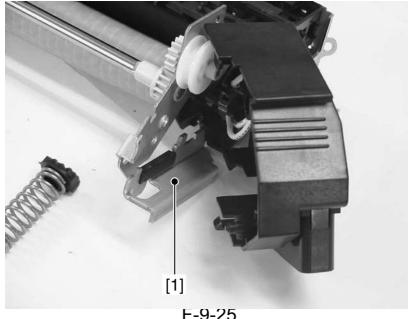

16) Remove the plate [1].

17) Remove the spring holder [1] to remove the spring [2].

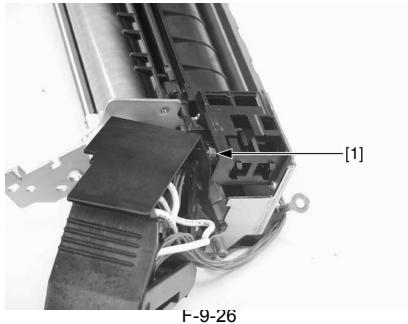

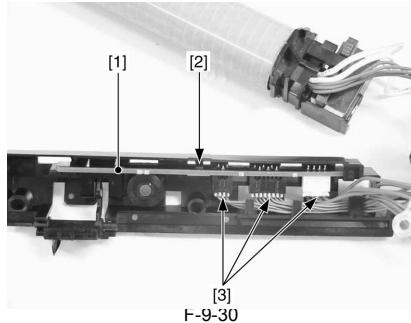

18) Remove the plate [1].

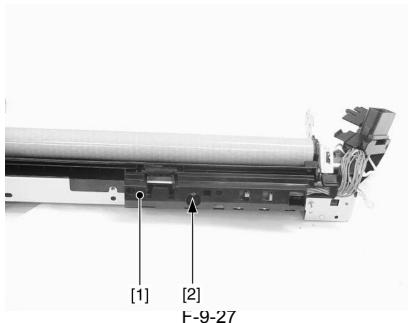

19) Disconnect the connector [1].

- 1 claw [2]
- 3 connectors [3]

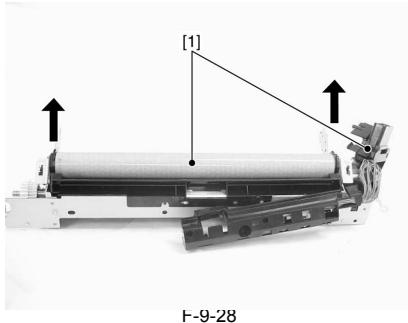

20) Remove the sensor unit [1].

- 1 screw [2]

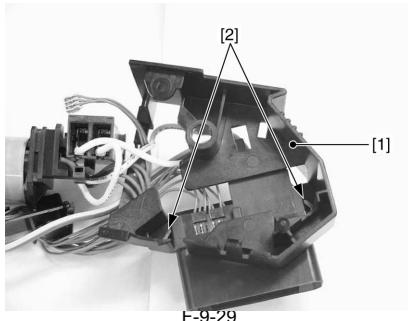

21) Remove the fixing sleeve unit [1].

22) Remove the cover [1].

- 2 claws [2]

23) Remove the PCB [1].

- Do not disassemble the fixing sleeve unit in the field.
- Disassembling it may cause a functional fault.

9.4.3 Fixing Drive Unit

9.4.3.1 Before Removing the Fixing Drive Unit

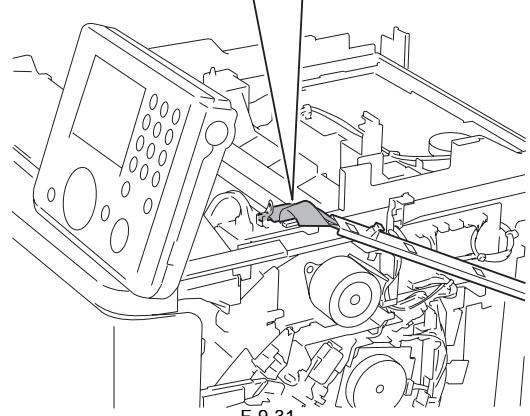

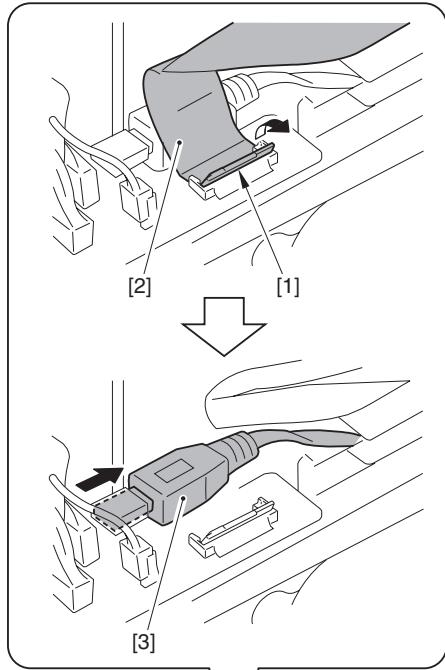

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.([page 7-31](#))Reference [Removing the ETB Unit]
- 2) Remove the fixing assembly.([page 9-6](#))Reference [Removing the Fixing Assembly]
- 3) Remove the rear cover unit.([page 10-11](#))Reference [Removing the Rear Cover Unit]
- 4) Remove the ADF Unit + Reader Unit.([page 4-8](#))Reference [Removing the ADF Unit + Reader Unit]
- 5) Remove the left cover.([page 10-13](#))Reference [Removing the Left Cover]
- 6) Remove the right cover.([page 10-11](#))Reference [Removing the Right Cover]
- 7) Remove the Upper Frame Unit.([page 10-18](#))Reference [Removing the Upper Frame Unit]
- 8) Remove the Reversal Unit.([page 8-28](#))Reference [Removing the Reversal Unit]

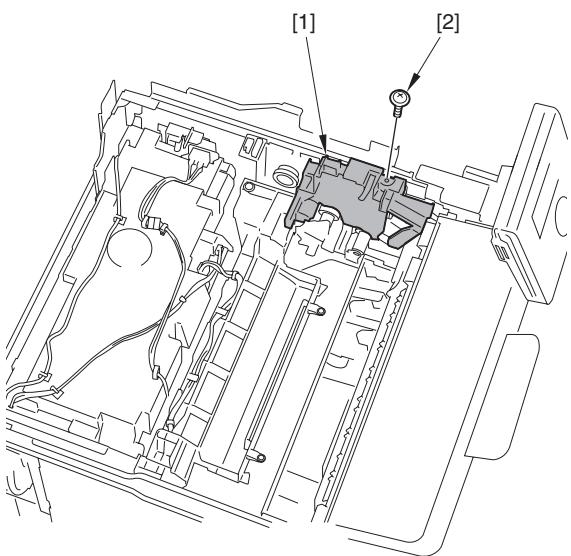

9.4.3.2 Removing the Fixing Drive Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

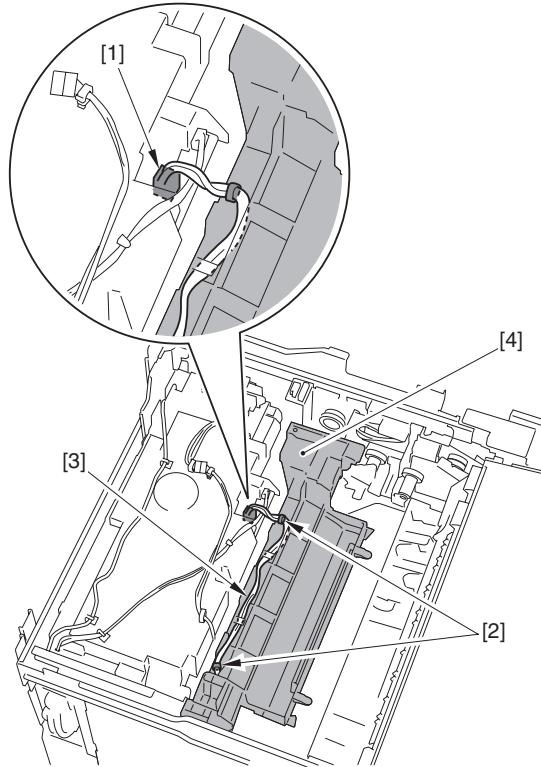

- 1) Open the cable holder [1] to remove the flat cable [2].
- 2) Disconnect the USB connector [3].

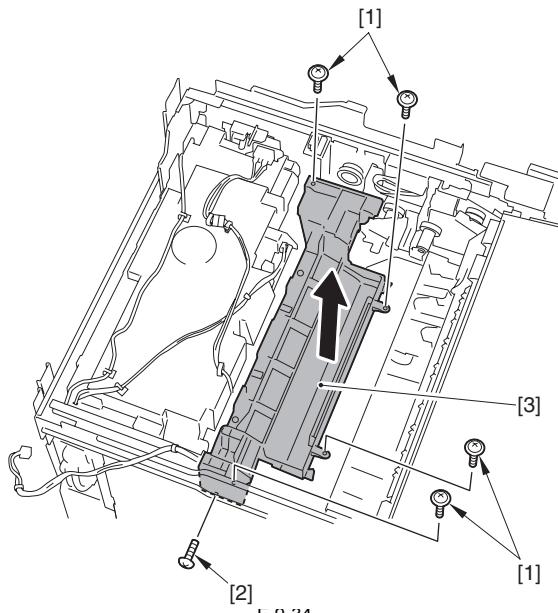

3) Remove the cover [1].
- 1 screw [2]

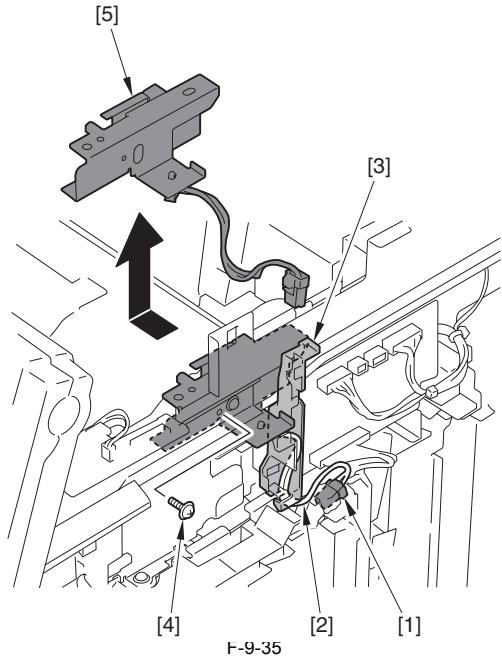

4) Disconnect the connector [1] and remove the 2 harness bands [2] and the harness [3] from the harness guide cover [4].

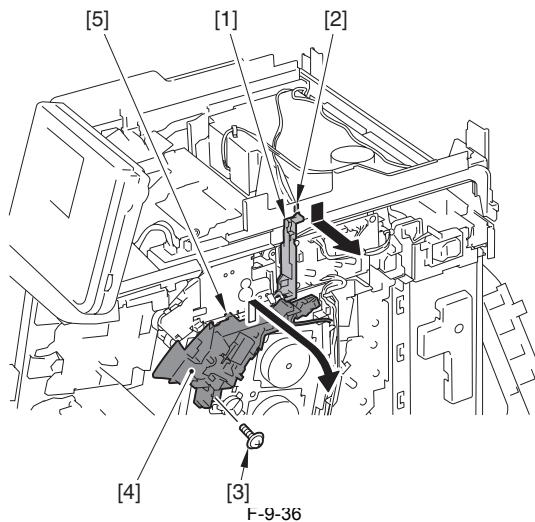

5) Remove the 4 screws [1] and the screw (binding) [2] to remove the harness guide cover [3].

6) Disconnect the connector [1] and free the harness [2] from the harness guide [3].
7) Remove the screw [4] to remove the switch unit [5].

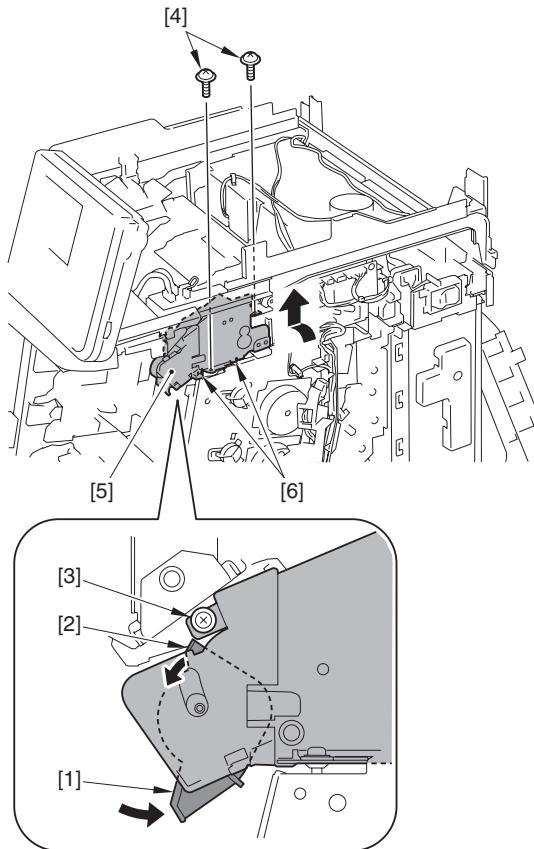

- 8) Remove the harness guide [1].
- 1 claw [2]
9) Remove the screw [3], move the interlock switch unit [4] in the direction of the arrow and release the hook [5] to remove the interlock switch unit [4].

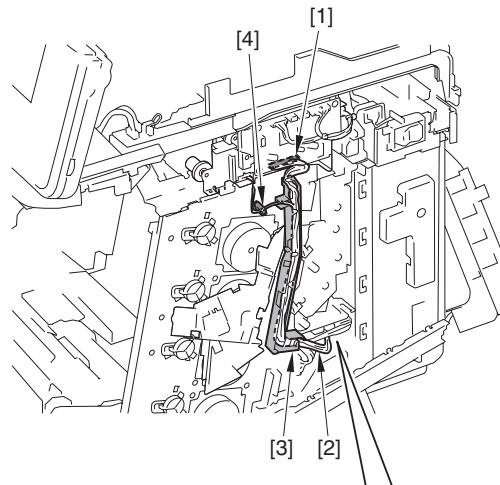

- 10) Push the lever [1], and remove the screw [3] while lowering the projection [2].
11) Remove the 2 screws [4], move the duplex feed drive unit [5] in the direction of the arrow and release the 2 projections [6] to remove the duplex feed drive unit [5].

⚠ Point to Note at Work

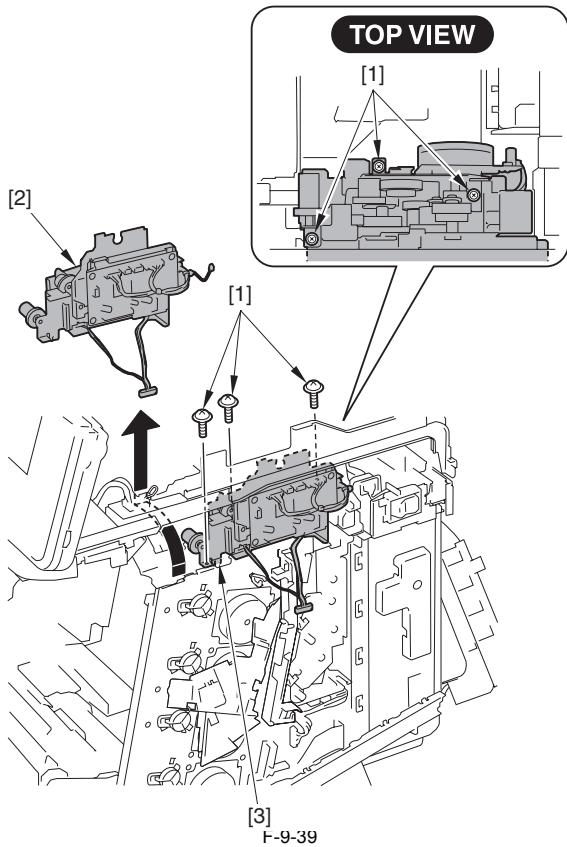

The screw [3] is located at approx. 20mm rear side. Do not drop the screw [3] when removing/tightening.

- 12) Disconnect the 2 connectors [1] and free the harness [2] from the harness guide [3] and the wire saddle [4].

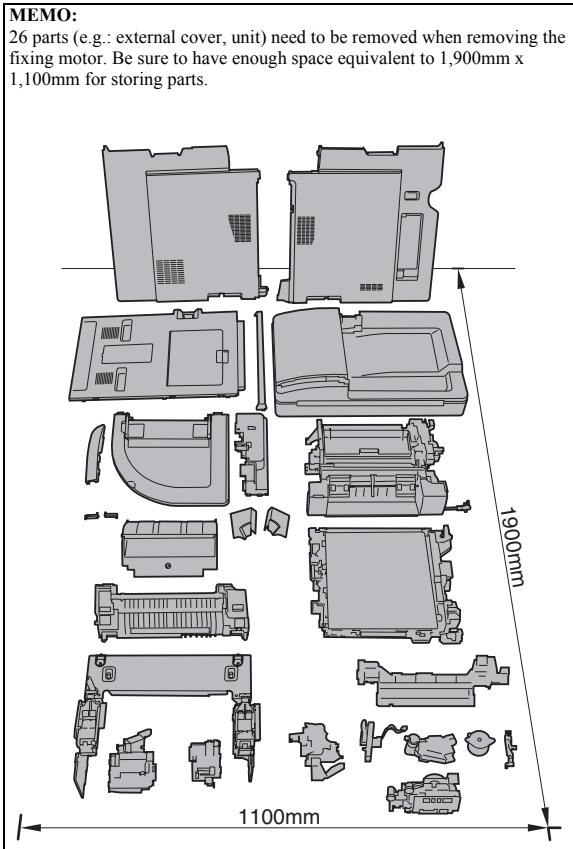

- 13) Remove the 3 screws [1], move the fixing drive unit [2] in the direction of the arrow and release the projection [3] to remove the fixing drive unit [2].

9.4.4 Fixing Motor

9.4.4.1 Before Removing the Fixing Motor

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

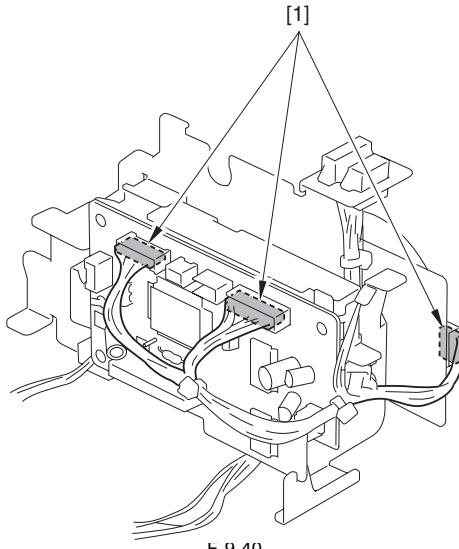

- 1) Remove the ETB unit.([page 7-31](#))Reference [Removing the ETB Unit]
- 2) Remove the fixing assembly.([page 9-6](#))Reference [Removing the Fixing Assembly]
- 3) Remove the rear cover unit.([page 10-11](#))Reference [Removing the Rear Cover Unit]
- 4) Remove the ADF Unit + Reader Unit.([page 4-8](#))Reference [Removing the ADF Unit + Reader Unit]
- 5) Remove the left cover.([page 10-13](#))Reference [Removing the Left Cover]
- 6) Remove the right cover.([page 10-11](#))Reference [Removing the Right Cover]
- 7) Remove the Upper Frame Unit.([page 10-18](#))Reference [Removing the Upper Frame Unit]
- 8) Remove the Reversal Unit.([page 8-28](#))Reference [Removing the Reversal Unit]
- 9) Remove the Fixing Drive Unit.([page 9-9](#))Reference [Removing the Fixing Drive Unit]

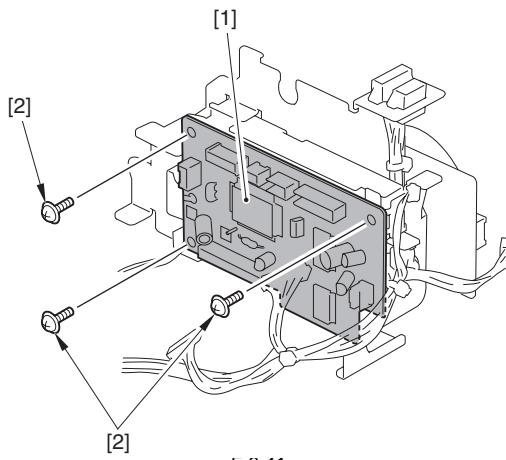

9.4.4.2 Removing the Fixing Motor

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

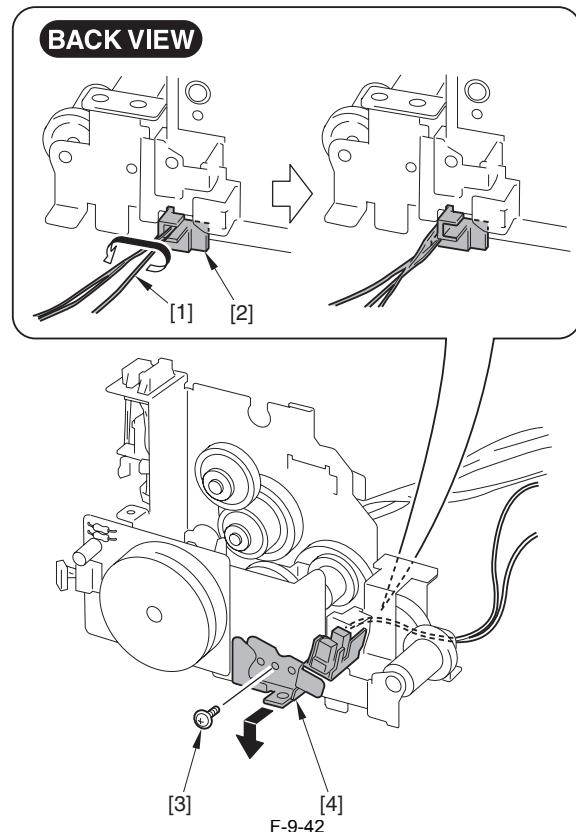

- 1) Disconnect the 3 connectors [1].

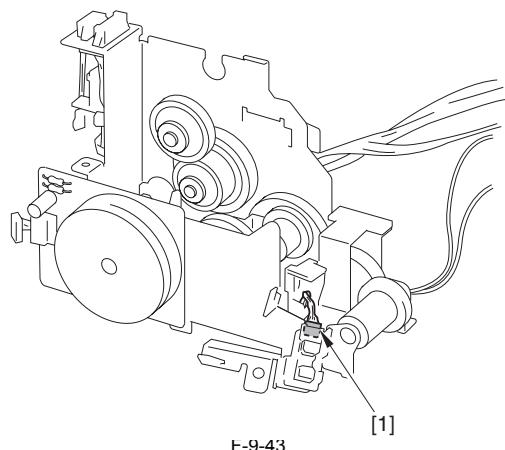

- 2) Remove the fixing driver PCB [1].
- 3 screws [2]

- 3) Free the harness [1] from the harness guide [2].
- 4) Remove the screw [3] to pull out the sensor and the attaching plate [4].

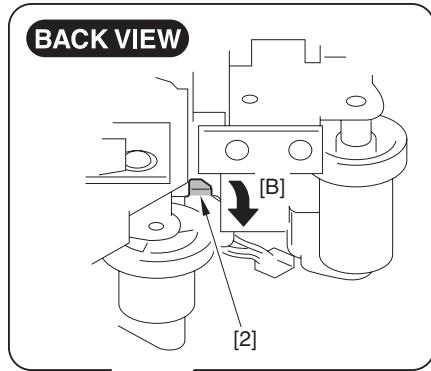

5) Disconnect the connector [1].

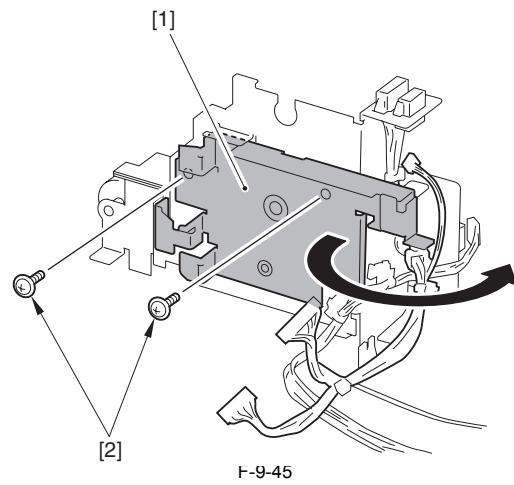

6) Move the harness guide [1] in the direction of the arrow [A] to remove the hook [2] in the direction of the arrow [B].

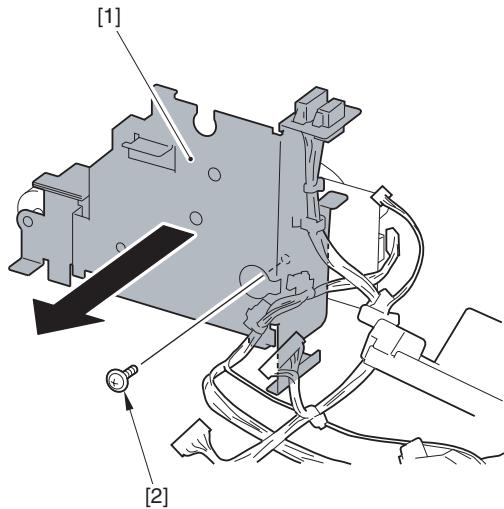

7) Remove the harness guide [1].

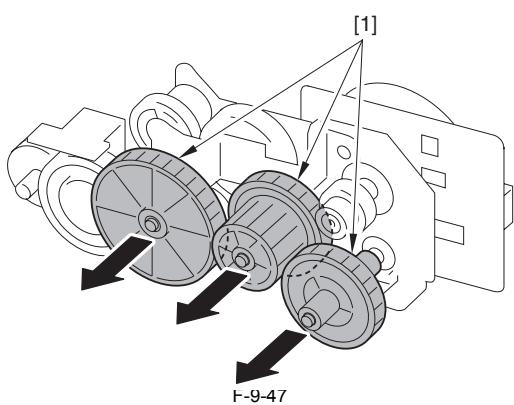

8) Remove the plate [1].
- 2 screws [2]

9) Remove the fixing drive unit support plate [1].
- 1 screw (black) [2]

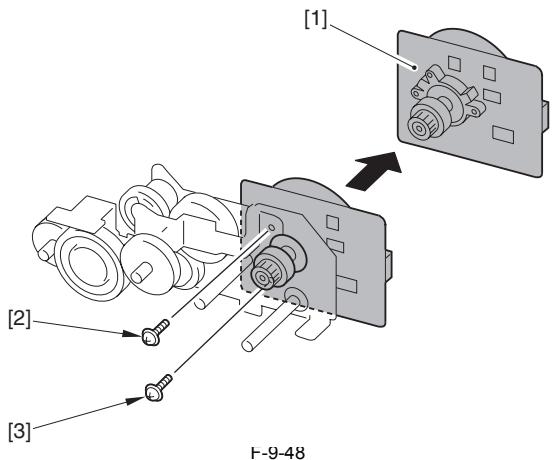

10) Remove the 3 gears [1]

11) Remove the fixing motor [1].

- 1 screw (black) [2]
- 1 screw [3]

10.1 DC Controller

10.1.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The CPU in the DC controller PCB controls the operational sequence of the machine.

- 1) When the power switch of the machine is turned ON, DC power is supplied from the low-voltage power PCB to the DC controller PCB.
- 2) The CPU in the DC controller PCB starts to control the printer operation.
- 3) The DC controller receives a print command and image data from the main controller.
- 4) When the machine is placed in standby, the CPU sends signals to drive each load, such as laser diode, motors, and solenoids, etc.

10.1.2 Operation of Each Block

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

CPU (IC1001)

The CPU is a 16-bit single-chip processor with built-in ROM and RAM.

It controls the following printer operation according to the control program stored in the ROM.

- Sequence control of the printer engine
- Control of the ASIC
- Control of the fixing assembly
- Control of solenoid
- Control of sensors/switches
- Control of the fixing control circuit (relay drive)

ASIC (IC1010)

The ASIC (Application Specific IC) is an IC used in an interface such as an IC, memory, and external equipment.

It controls the following printer operation according to the command from the CPU.

- Control of the laser scanner unit
- Communication with the main controller
- Control of the high-voltage power PCB
- Control of motors
- Control of fans
- Write/Read EEPROM
- Control of the memory controller PCB

Motor Driver IC (IC401, IC802, IC803)

The motor driver IC controls each motor according to the command from the CPU or ASIC.

Reset IC (IC1007)

The reset IC monitors +3.3 V voltage, and resets the CPU and ASIC when the power is turned ON.

EEPROM (IC1007)

The EEPROM stores various backup data.

10.1.3 Fan/Motor Control

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine uses nine motors in total for paper feeding and image formation.

T-10-1

Name	Purpose	Type	Fault detection
Motor	Fixing motor (M1) To drive the pressure roller and delivery roller To drive engagement/disengagement of the developing roller To drive engagement/disengagement of the pressure roller	DC motor	Provided
	Pickup motor (M4) To drive the pickup roller of the machine	Stepping motor	Not provided
	ETB motor (M5) To drive the ETB, To drive engagement/disengagement of the transfer roller	DC motor	Provided
	M drum motor (M6) C drum motor (M7) Y drum motor (M8) Bk drum motor (M9)	To drive the developing roller, photosensitive drum, and stirring plate	DC motor
	Duplex feed motor (M10) Reverse motor (M11)	To drive the duplex feed roller To drive the reverse roller	Stepping motor Stepping motor
	Main unit fan (FM1) Duplex fan (FM2)	To exhaust heat from the inside of the machine To exhaust heat from the reverse unit	DC motor DC motor
			Provided Provided

10.1.4 Drum motor failure detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The DC controller determines that a failure occurred in the drum motors (M6 to 9) in any of the following cases. The machine stops operation and displays "E012 (Drum motor error)" on the control panel.

- Drum motor start-up failure
The interval of the drum motor speed signal is not settled at the specified interval even when 2.5 seconds elapse after start-up of the drum motor.
- Drum motor rotation failure
After the drum motor speed signal is settled at the specified interval, it becomes out of the specified interval for more than 2 seconds continuously.

10.1.5 ETB motor failure detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The DC controller determines that a failure occurred in the ETB motor (M5) in any of the following cases. The machine stops operation and displays "E012 (ETB motor failure)" on the control panel.

- ETB motor start-up failure
The interval of the ETB motor speed signal is not settled at the specified interval even when 3.5 seconds elapse after start-up of the ETB motor.
- ETB motor rotation failure
After the ETB motor speed signal is settled at the specified interval, it becomes out of the specified interval for more than 2 seconds continuously.

10.1.6 Fixing motor failure detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The DC controller determines that a failure occurred in the fixing motor (M1) in any of the following cases. The machine stops operation and displays "E014 (Fixing motor failure)" on the control panel.

- Fixing motor start-up failure
The interval of the fixing motor speed signal is not settled at the specified interval even when 2.5 seconds elapse after start-up of the fixing motor.
- Fixing motor rotation failure
After the fixing motor speed signal is settled at the specified interval, it becomes out of the specified interval for more than 2 seconds continuously.

10.1.7 Main Unit Fan Failure Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The DC controller determines that a failure occurred in the main unit fan (FM1) when receiving the main unit fan lock signal for more than 10 times consecutively. The machine stops operation and displays "E804 (Main unit fan failure)" on the control panel.

10.1.8 Duplex Fan Failure Detection

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The DC controller determines that a failure occurred in the duplex fan (FM2) when receiving the duplex fan lock signal for more than 10 times consecutively. The machine stops operation and displays "E805 (Duplex fan failure)" on the control panel.

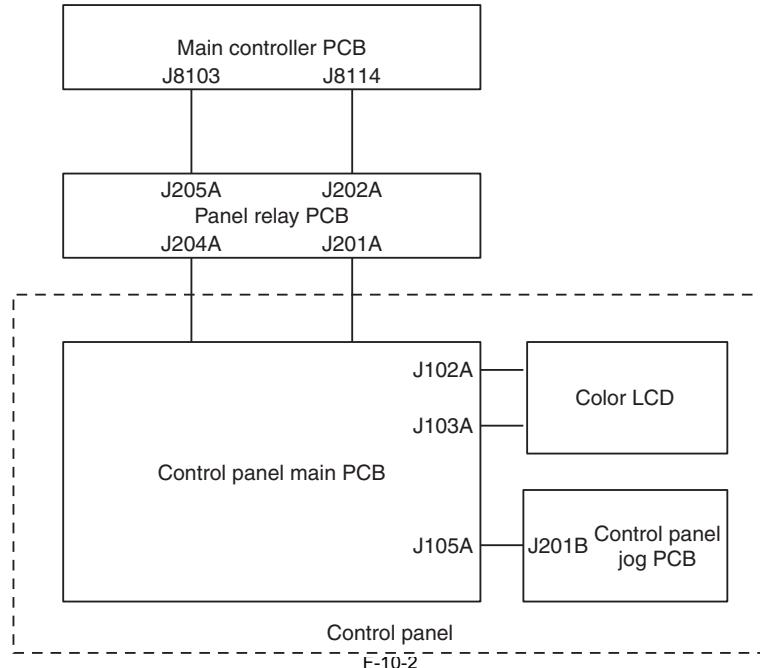

10.2 Control Panel

10.2.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Control panel on the host machine consists of the following PCBs and LCD.
Following is the main function of the control panel.

- LCD display
- Turning ON the control panel LED
- Entry with hard keys, wheel and volume
- Interface control for the USB memory, CF card and SD/MS card

CPU on the main controller PCB transmits the data (display information) to the control panel main PCB according to the programs.
The data is transmitted to color LCD via control panel main PCB.

10.3 Counter

10.3.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine is equipped with counters that indicate the counts of output according to types of printers.

These counters are indicated in response to a press on the Check key on the control panel, and they operate as follows (as set at time of shipment from the factory):
T-10-2

Model	Counter 1	Counter 2	Counter 3	Counter 4	Counter 5	Counter 6
100V *1	total 1 101	total (black-and-white 1) 108	copy (full color + mono color; 1) 232	total A (full color + mono color; 1) 149	*	*
					000	000
100V *1	total 2 102	copy (full color + mono color; 2) 231	total A (full color + mono color; 2) 148	copy (black-and-white 2) 222	total A (black-and-white 2) 133	*
					000	000
100V *1	total 1 101	total (full color/small) 121	total (black-and-white/small) 113	scan (total 1) 501	*	*
					000	000
120V *2	total 1 101	total (black-and-white 1) 108	copy (full color/small) 224	print (full color/small) 316	*	*
					000	000
230V *3	total 1 101	total (black-and-white 1) 108	copy+print (full color/sumall) 402	total 1 (duplex) 114	*	*
					000	000
230V *4	total (black-and-white/small)	total (full color/small)	scan (total 1)	print (total 1) 501	*	*
	113	121		301	000	000
230V *4	total 1 101	*	*	*	*	*
		000	000	000	000	000
230V *5	total 1 101	total (black-and-white 1) 108	copy (full color/small) 224	print (full color/small) 316	*	*
					000	000

Guide to Notations

large: large-size paper (longer than 364 mm in feed direction; count increased by 1).

small: small-size paper (364 mm in feed length or shorter).

total: all (C+P; count increased by 1).

duplex: duplexing (in auto duplexing; count increased by 1).

- 3-digit number in the counter column indicates the setting value in the following service mode.

COPIER> OPTION> USER> COUNTER1 to 8

- From counter 2 to 8 can be changed in service mode COPIER> OPTION> USER> COUNTER1 to 8

*1: F15-1114/1115

*2: F15-1134/1135

*3: F15-1155/1164/1165/1185

*4: F15-1194

*5: F15-1144/1145

*: by default, not indicated; may be changed in service mode.

10.3.2 Timing of Increasing the Count

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The machine increases the count depending on the selected mode (single-sided, double-sided).

1. Single-Sided Print, 2nd Side of a Double-Sided Print

In the case of a single-sided print or the 2nd side of a double-sided print, the machine increase the count when the trailing edge of paper is discharged outside the machine, as indicated by the output of the delivery sensor (SR715).

2. 1st Side of a Double-Sided Print

The machine increases the count when the pre-registration sensor (SR708) goes on, assuming that the printing on the 1st side is over.

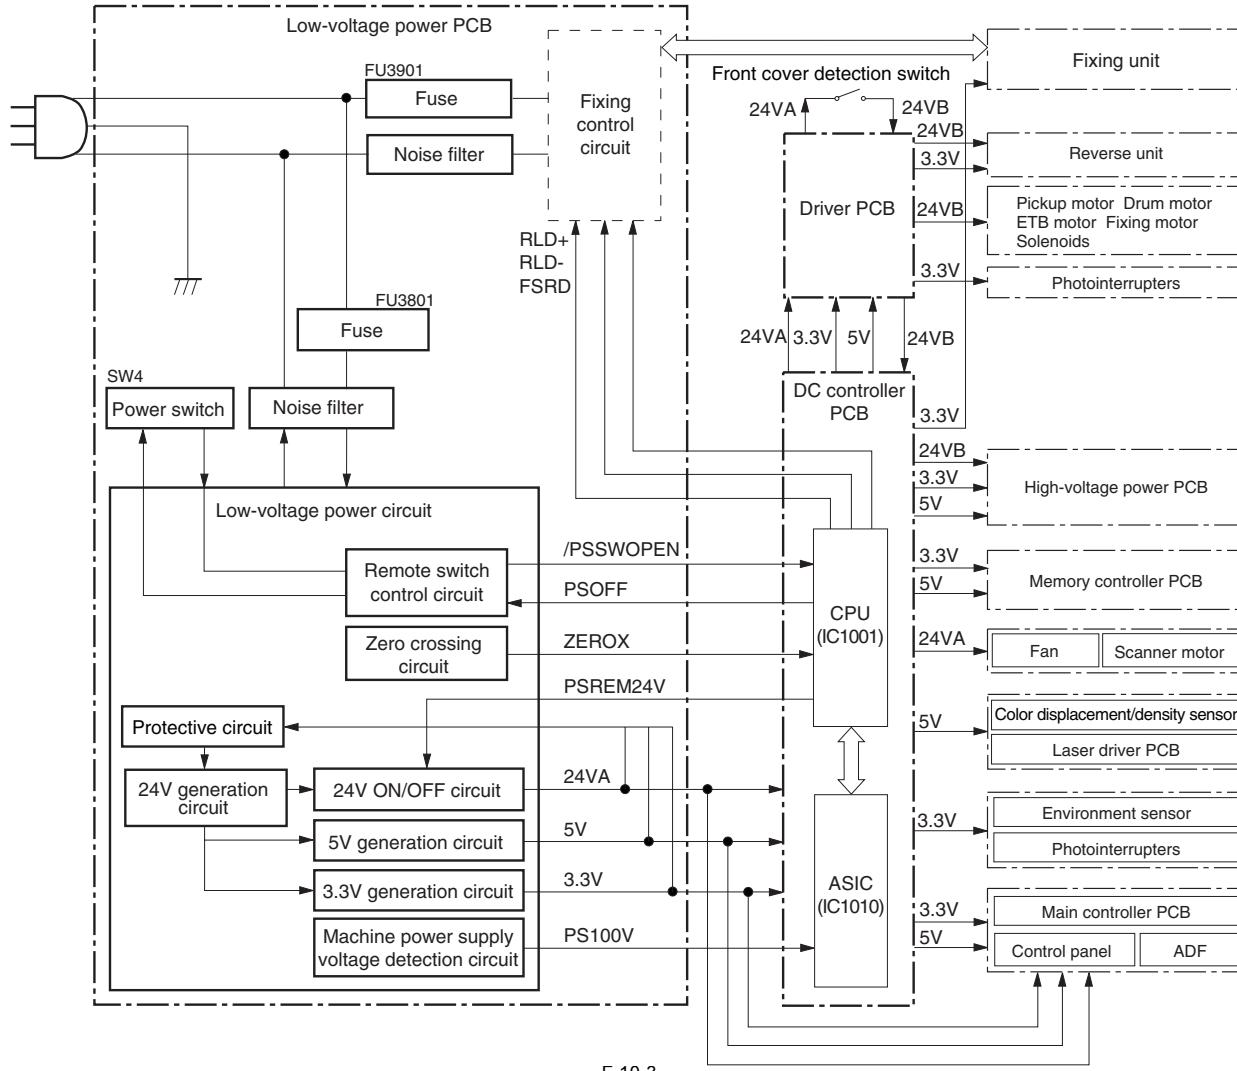

10.4 Power Supply

10.4.1 Power Supply

10.4.1.1 Low-voltage Power Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The low-voltage power PCB is to convert AC into DC covering the DC loads.

F-10-3

The low-voltage power PCB is partially activated as soon as plugged in the electrical outlet. When turning ON the power switch (SW4), whole low-voltage power supply works.

The AC power is then converted into +24V, +5V and +3.3V covering each of machine DC loads. The following are the main loads for each power.

+24V:

Main controller PCB, high-voltage power PCB, Motors, solenoids, fans, reverse unit, and ADF

+5V:

Main controller PCB, driver PCB, laser driver PCB, high-voltage power PCB, memory controller PCB, color displacement/density sensor, and control panel

+3.3V:

DC controller PCB, main controller PCB, driver PCB, high-voltage power PCB, memory controller PCB, sensor (photo interrupter), environment sensor, fixing unit, control panel, reverse unit, and ADF

10.4.2 Protection Function

10.4.2.1 Protective Function

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The low-voltage power circuit has protective function against overcurrent and overvoltage. Once there flows an excessive current accidentally to the load side for some trouble such as a short-circuit problem, or overvoltage occurs, it automatically cuts off the output voltage to prevent failures in the low-voltage power circuit. In case that no DC voltage is supplied from the low-voltage power circuit, turn off the power switch (SW4) anyway. Do not turn on the power again as far as the root cause is not found at the load side since the protective function may still work.

There are two fuses, FU3801 and FU3901, in the circuit for other protective function. The fuses blow and cut off the AC power, once AC overcurrent flows into the AC line.

To recover the low-voltage power circuit in case of functioning the protection, turn the power OFF (by switching off or unplugging) and leave the printer off for 15 seconds or longer, then turn the printer ON again.

10.4.2.2 Safety

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

For the safety reason for the users and the service technicians, the +24V DC line is intentionally divided into two ways, +24VA and +24VB. The +24VA is supplied from the DC controller PCB all the time, whereas the power supply of the +24VB stops when the front cover detection switch (SW1) is cut off.

The high-voltage power PCB and motors are supplied with the +24VB. They stop when the front cover or the reverse assembly cover is opened. This is to protect the users and the service technicians from an electric shock or injury to their hands.

The +24VB also functions as the front cover detection signal. The CPU determines the front cover or the reverse assembly cover open when the +24VB supply stops.

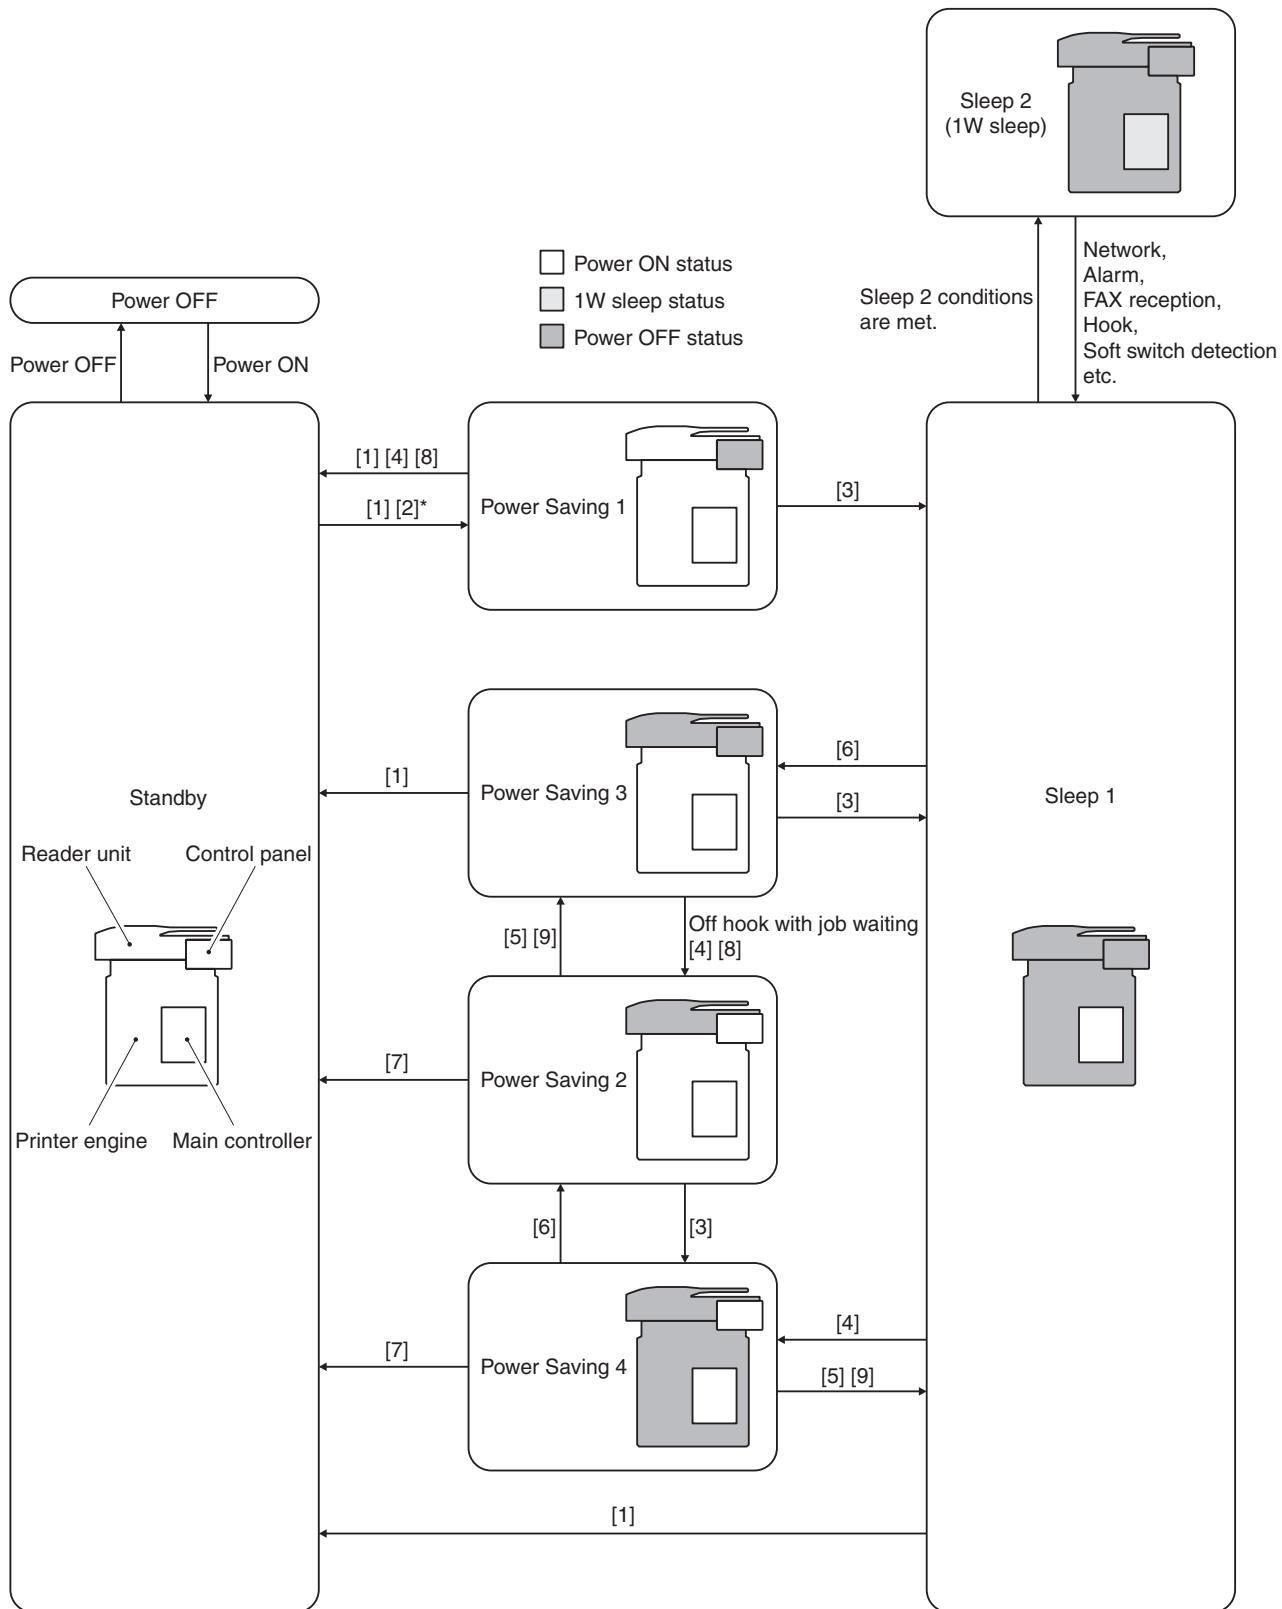

10.4.3 Energy-Saving Function

10.4.3.1 Overview

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-10-3

Power control status	Mode	Status
Standby	Standby 1	Normal standby status
	Standby 2	Half of the LCD backlight is turned on.
Power Saving	Power Saving 1	Only the LCD backlight is turned off.
	Power Saving 2-1	The reader unit is turned off.
	Power Saving 2-2	Half of the LCD backlight is turned on, and the reader unit is turned off.
	Power Saving 3	The LCD backlight and reader unit are turned off.
	Power Saving 4-1	The printer engine and reader unit are turned off.
	Power Saving 4-2	Half of the LCD backlight is turned on, and the printer engine and reader unit are turned off.
Sleep	Sleep 1	Only the CPU of the main controller is operating.
	Sleep 2	IW sleep The CPU of the main controller is also stopped. The controller software recovers when interrupted by various types of operation.

F-10-4

[1] The software switch is pressed.

[4] Off-hook is detected.

[7] The screen switches. (Entry by keys in the control panel)

[2] Auto sleep time has elapsed.

[5] On-hook is detected.

[8] An alert occurs.

[3] No job

[6] A job occurs.

[9] The machine recovers from an alert.

*: On-hook status only. The machine does not enter the power saving status even if "the software switch is pressed" or "auto sleep time has elapsed" in an on-hook status.

Even if an error such as "absence of paper" occurs in the Standby 2 status, the machine does not enter the Standby 1 status.

10.5 Parts Replacement Procedure

10.5.1 Front Cover

10.5.1.1 Before Removing the Front Cover Unit

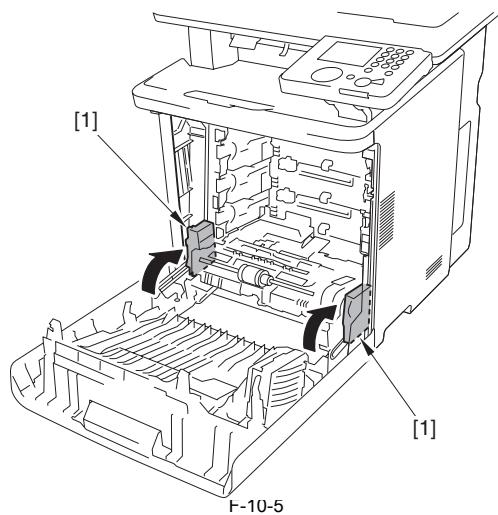

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#)) Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit. ([page 10-11](#)) Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover. ([page 10-13](#)) Reference [Removing the Left Cover]
- 4) Remove the right cover. ([page 10-11](#)) Reference [Removing the Right Cover]

10.5.1.2 Removing the Front Cover Unit

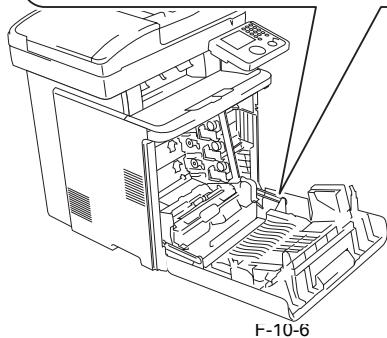

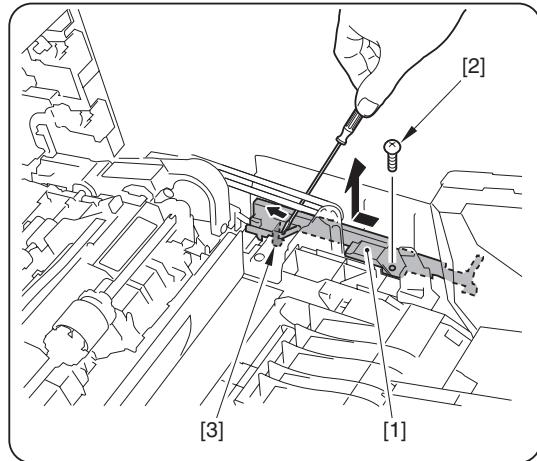

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Turn the 2 drawer connectors [1] up.

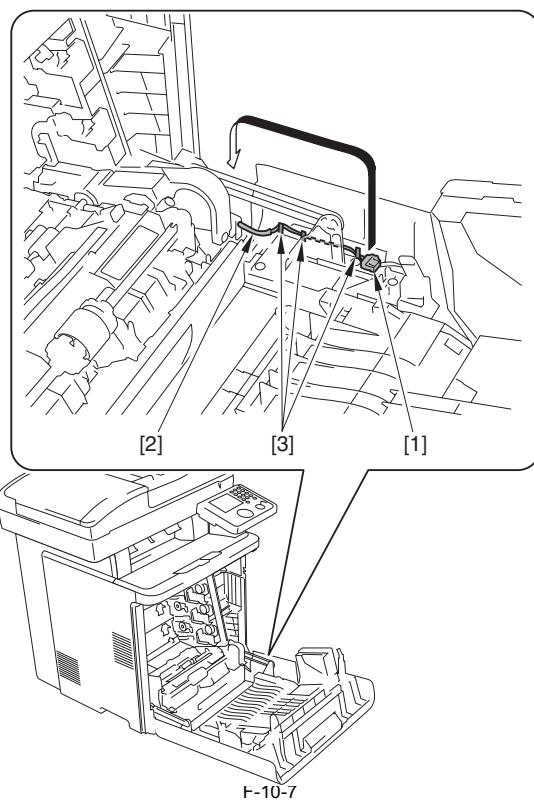

- 2) Remove the cable cover [1].

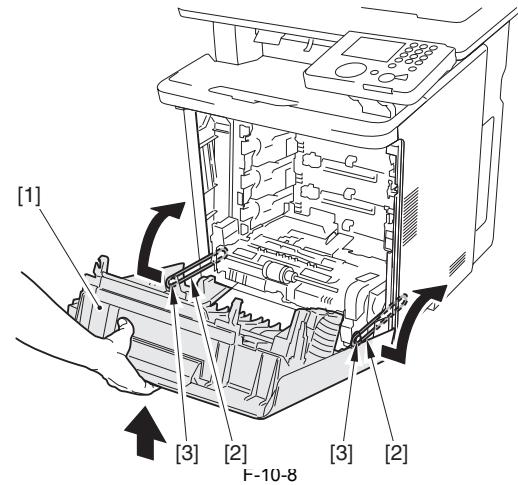

- 1 screw [2]
- 1 claw [3]

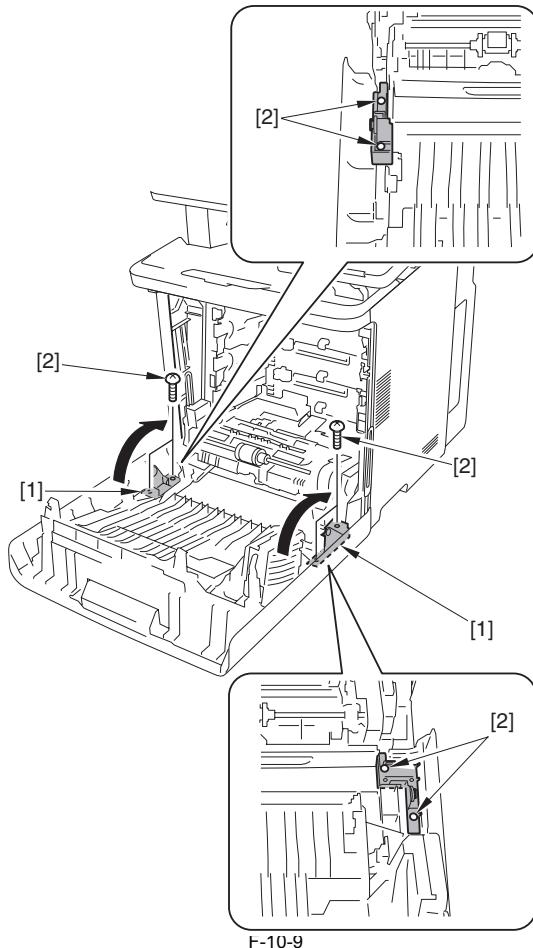

- 3) Remove the relay connector [1] and the harness [2] from the harness guide [3].

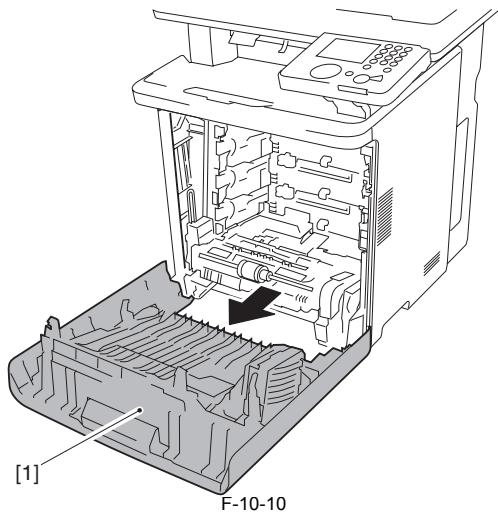

- 4) While lifting the front cover unit [1], remove the 2 links [2] from the 2 shafts [3] and raise it in the direction of the arrow.

- 5) Turn the 2 hinges [1] up in the direction of the arrow.
- 4 screws (binding) [2]

6) Remove the front cover unit [1].

10.5.2 Front Upper Cover 1

10.5.2.1 Before Removing Front upper Cover 1

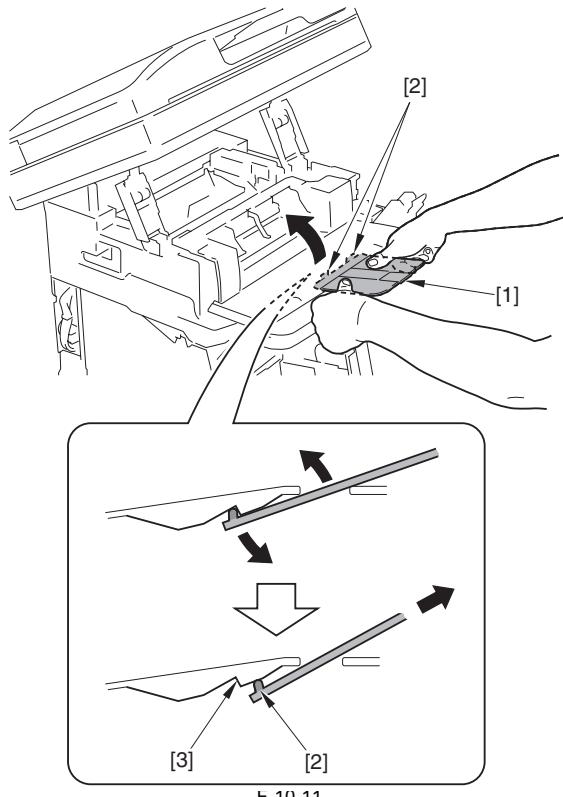

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#)) Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit. ([page 10-11](#)) Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover. ([page 10-13](#)) Reference [Removing the Left Cover]
- 4) Remove the right cover. ([page 10-11](#)) Reference [Removing the Right Cover]
- 5) Remove the control panel unit. ([page 10-21](#)) Reference [Removing the Control Panel Unit]

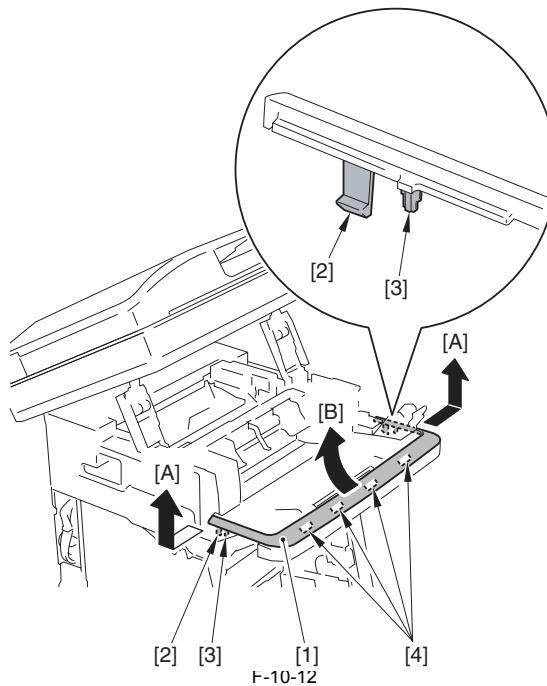

10.5.2.2 Removing Front Upper Cover 1

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Pull the delivery tray [1] out.
- 2) Move the delivery tray [1] in the direction of the arrow, and release the 2 projections [2] from the 2 claws [3] of the delivery tray cover to remove the delivery tray.

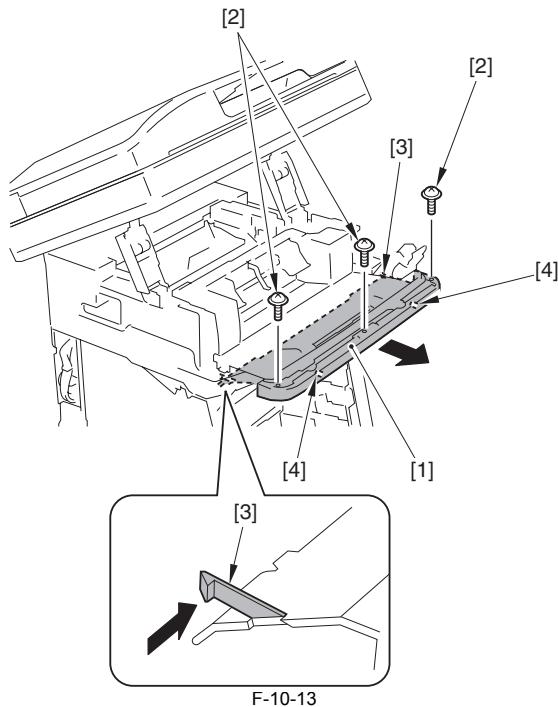

- 3) Remove the 2 claws [2] and the 2 bosses [3] at both sides of front upper cover 2 [1] in the direction of the arrow [A].
- 4) Move front upper cover 2 [1] in the direction of the arrow [B] and release the 4 claws [4] to remove front upper cover 2.

- 5) Remove front upper cover 1 [1].

- 3 screws [2]
- 2 claws [3]
- 2 bosses [4]

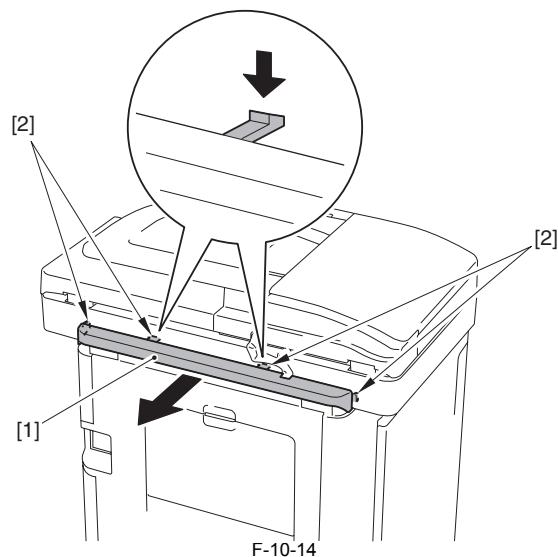

10.5.3 Rear Cover

10.5.3.1 Removing the Rear Cover Unit

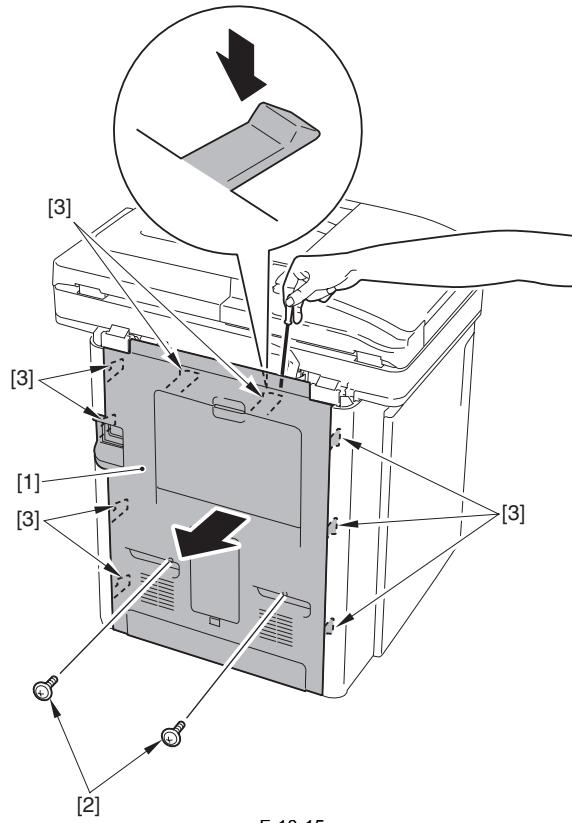

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the reader hinge cover [1].
 - 4 claws [2]

- 2) Remove the rear cover unit [1].

- 2 screws [2]
- 9 claws [3]

10.5.4 Right Cover

10.5.4.1 Before Removing the Right Cover

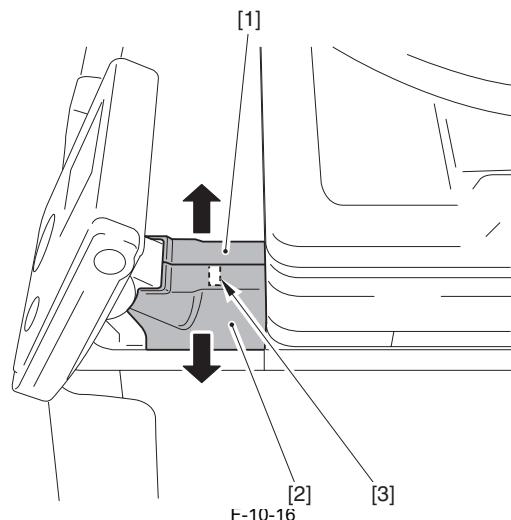

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#)) Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit. ([page 10-11](#)) Reference [Removing the Rear Cover Unit]

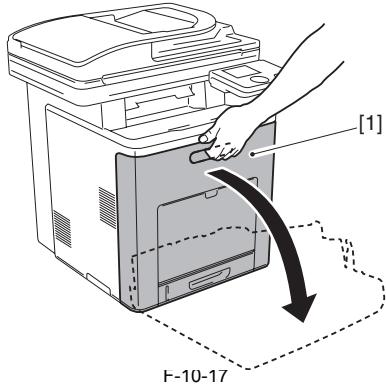

10.5.4.2 Removing the Right Cover

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

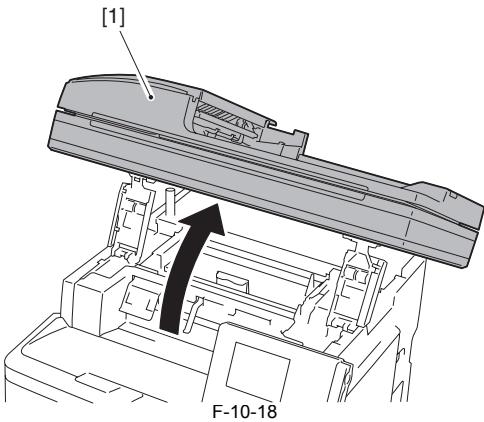

- 1) Remove the panel stand left cover [1] and the panel stand right cover [2].
 - 1 claw [3]

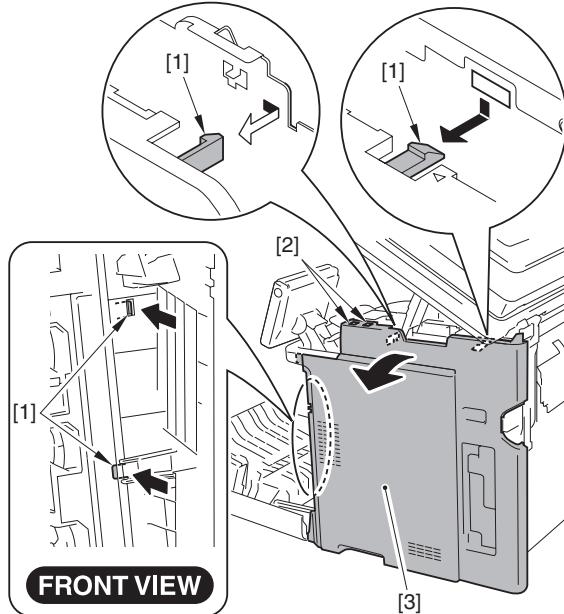

- 2) Open the front cover [1].

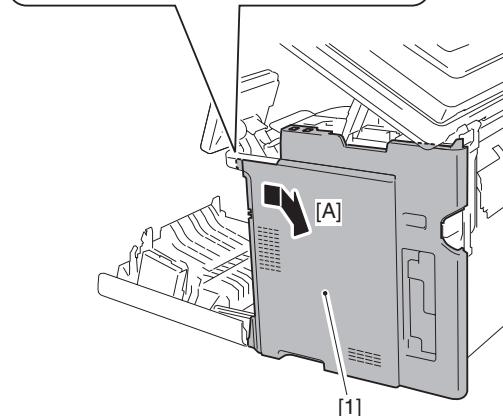

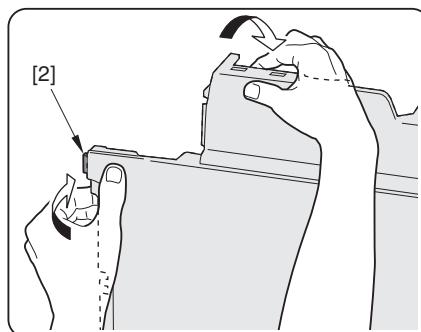

3) Open the ADF unit + reader unit [1].

F-10-18

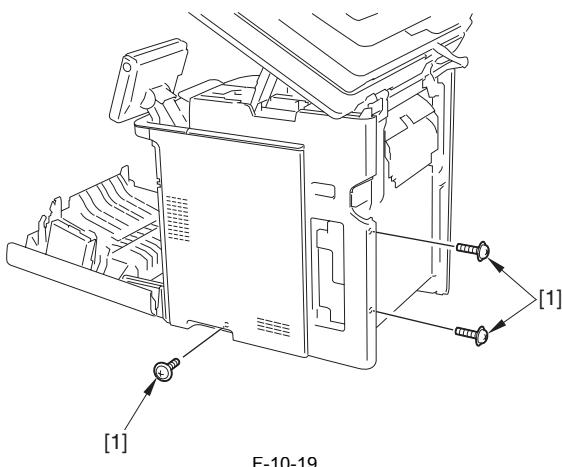

6) Bend the right cover [1] and remove the protrusion [2] in the direction of the arrow [A].

7) Move the right cover [1] in the direction of the arrow and release the 2 claws [2] to remove.

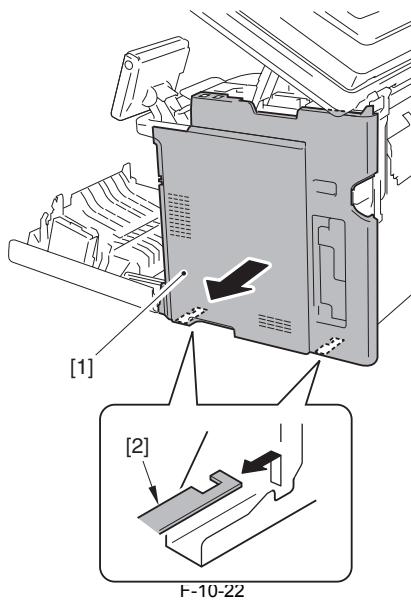

⚠ Points to note at work

Be sure not to close the ADF unit + reader unit hastily. If closing the ADF unit + reader unit hastily, the impact can cause damage.
Also be careful not to get your hands caught between the ADF unit + reader unit and the host machine.

4) Remove the 3 screws [1].

F-10-19

5) Remove the 4 claws [1] and the 2 hooks [2], and then move the right cover [3] in the direction of the arrow.

10.5.5 Left Cover

10.5.5.1 Before Removing the Left Cover

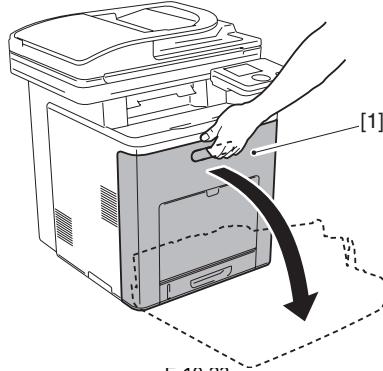

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#)) Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit. ([page 10-11](#)) Reference [Removing the Rear Cover Unit]

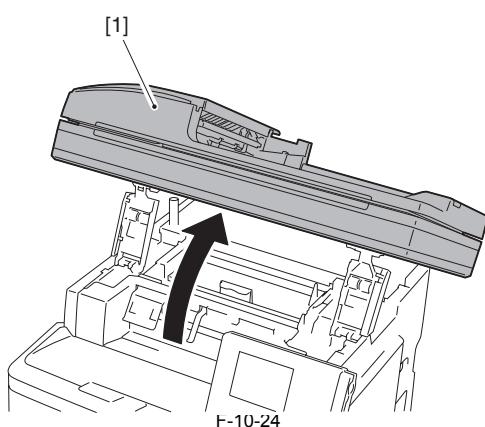

10.5.5.2 Removing the Left Cover

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Open the front cover [1].

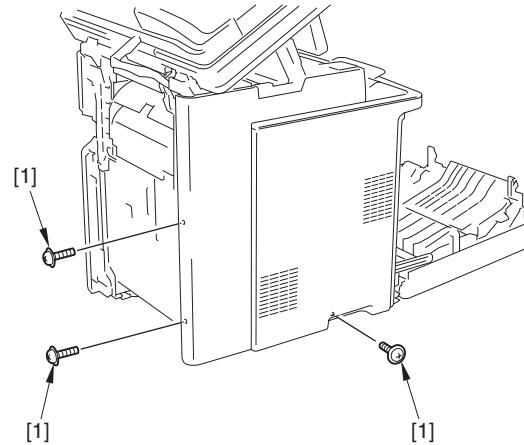

- 2) Open the ADF unit + reader unit [1].

Points to note at work

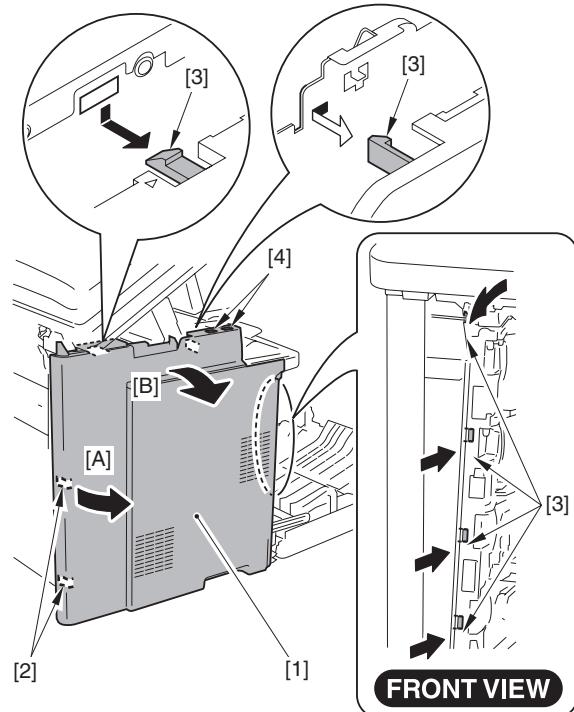

Be sure not to close the ADF unit + reader unit hastily. If closing the ADF unit + reader unit hastily, the impact can cause damage.
Also be careful not to get your hands caught between the ADF unit + reader unit and the host machine.

- 3) Remove the 3 screws [1].

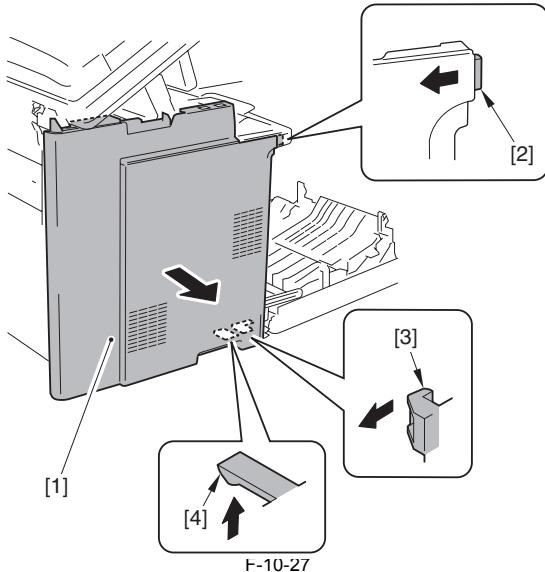

- 4) Remove the 2 hooks [2] of the left cover [1] in the direction of the arrow [A].

- 5) Remove the 6 claws [3] and the 2 hooks [4] and move the left cover [1] in the direction of the arrow [B].

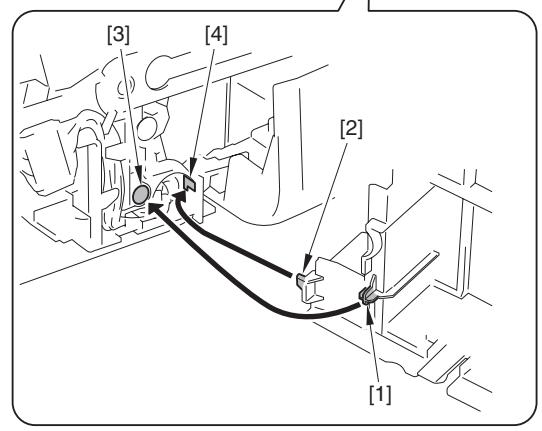

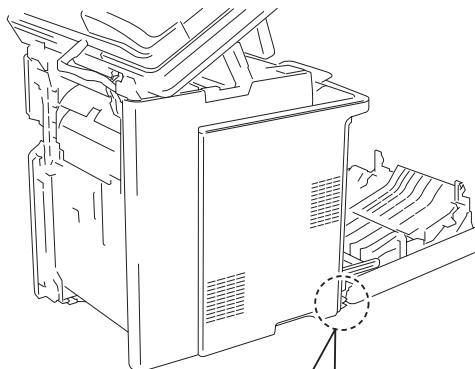

- 6) Move the left cover [1] in the direction of the arrow, and release the projection [2], the projection [3] and the claw [4] to remove.

Point to Note at Installation

Be sure to install the left cover by fitting the boss [1] and the projection [2] of the left cover with the harness guide hole [3] and the groove [4] of the host machine.

10.5.6 Delivery Tray Cover

10.5.6.1 Before Removing the Delivery Tray Cover

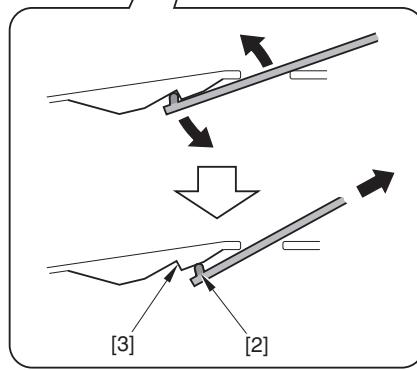

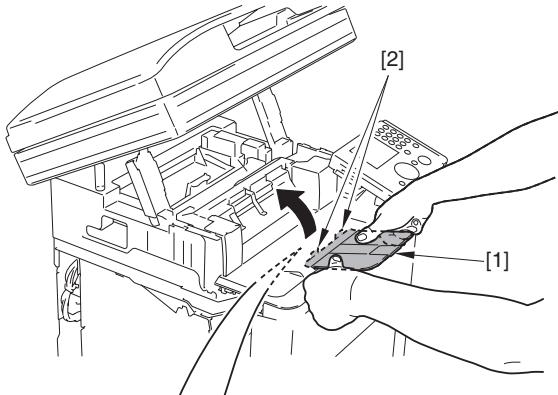

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the fixing assembly.[\(page 9-6\)](#)Reference [Removing the Fixing Assembly]
- 3) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 4) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 5) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]

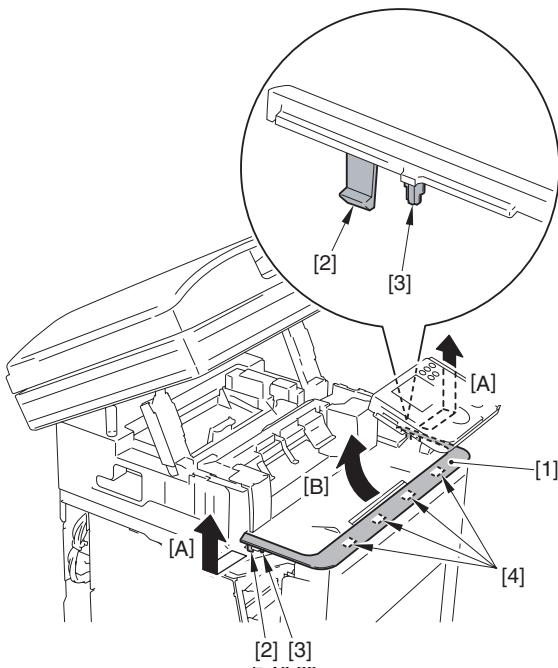

10.5.6.2 Removing the Delivery Tray Cover

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

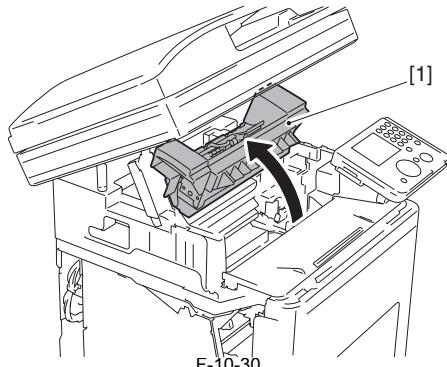

- 1) Pull the delivery tray [1] out.
- 2) Move the delivery tray [1] in the direction of the arrow and release the 2 projections [2] from the 2 claws [3] of the delivery tray cover to remove.

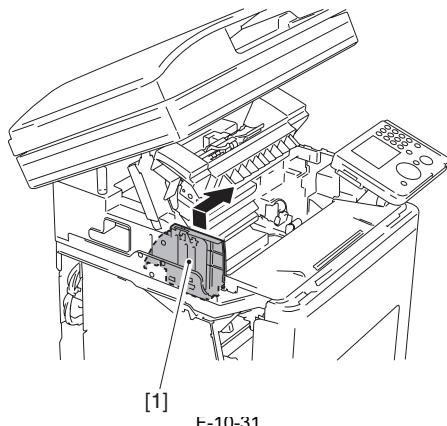

- 3) Remove the 2 claws [2] and the 2 bosses [3] at both sides of front upper cover 2 to remove them in the direction of the arrow [A].
- 4) Move front upper cover 2 [1] in the direction of the arrow [B] and release the 4 claws [4] to remove.

- 5) Open the delivery cover [1].

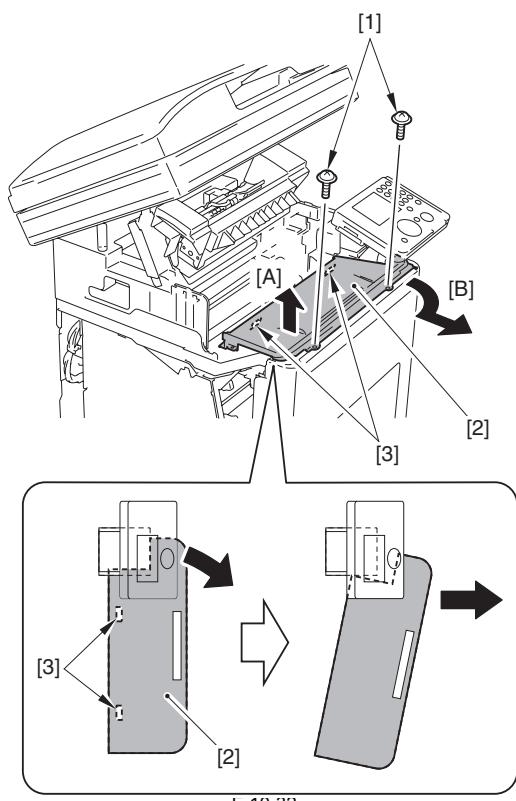

6) Remove the left upper front inner cover [1].

7) Remove the 2 screws [1].

8) Move the delivery tray cover [2] in the order of arrow directions [A] and then [B], and release the 2 claws [3] to remove.

F-10-32

10.5.7 Power Station Cover

10.5.7.1 Before Removing the Electrical Components Cover

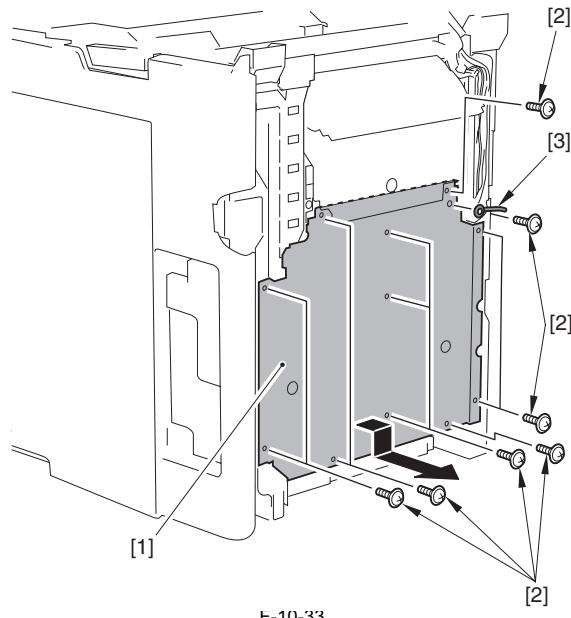

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]

- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]

10.5.7.2 Removing the Electrical Components Cover

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the Electrical Components Cover [1].
 - 12 screws [2]
 - 1 terminal [3]

F-10-33

10.5.8 Controller Box

10.5.8.1 Before Removing the Controller Box

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

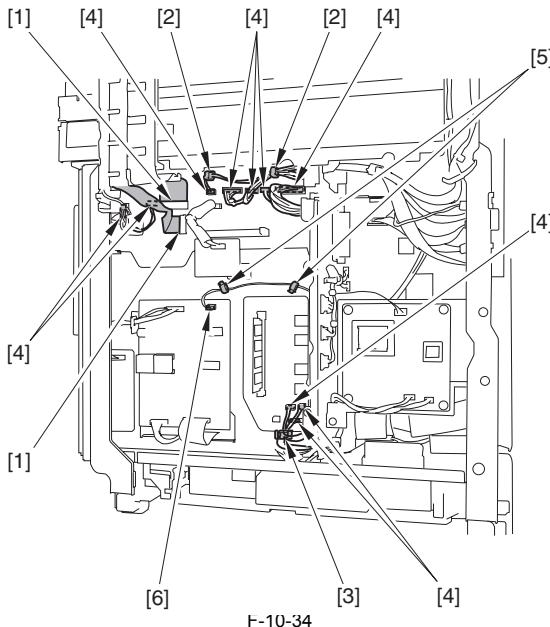

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 4) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]
- 5) Remove the Electrical Components Cover.[\(page 10-15\)](#)Reference [Removing the Electrical Components Cover]

10.5.8.2 Removing the Controller Box

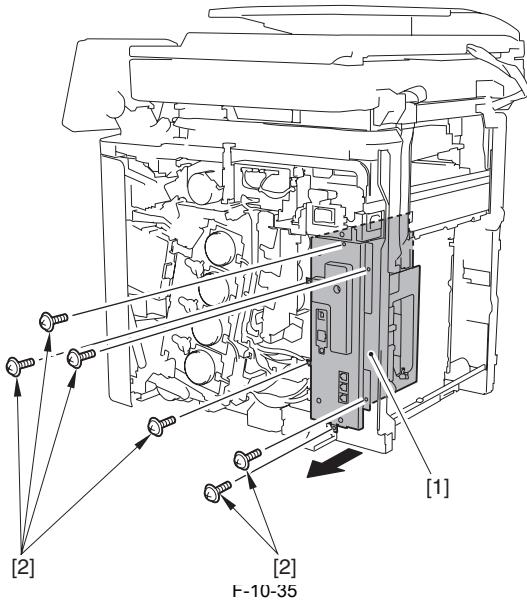

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the following parts.

- 2 flat cables [1]
- 2 clamps [2]
- edge saddle [3]
- 10 connectors [4]
- 2 clamps [5] (only of the machine with FAX)
- connector [6] (only of the machine with FAX)

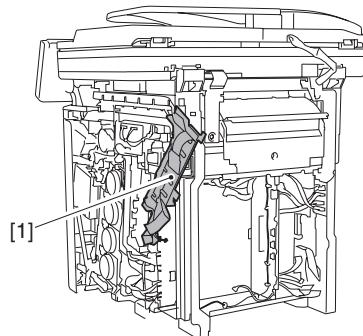

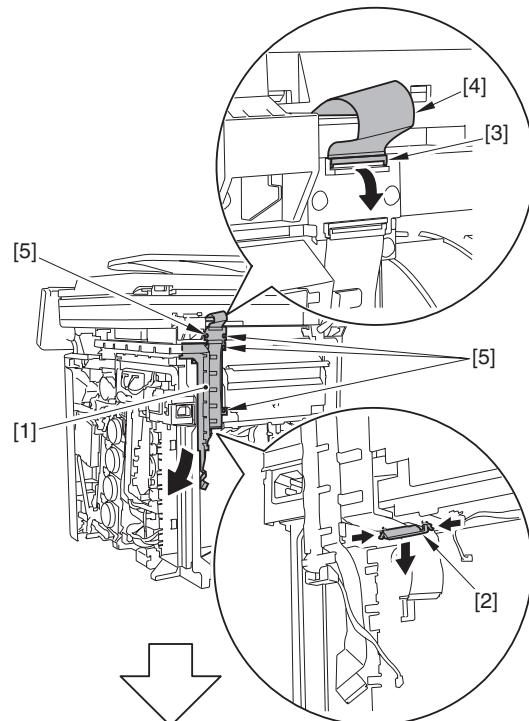

- 2) Remove the controller box [1].
- 6 screws [2]

- 1) Remove the harness guide [1].

- 1 cable clip [2]
- 1 cable holder [3]
- 1 flat cable [4]
- 4 screws [5]

- 2) Remove the right frame reinforcement plate [1].
- 8 screws [2]

10.5.9 Laser Scanner Cover

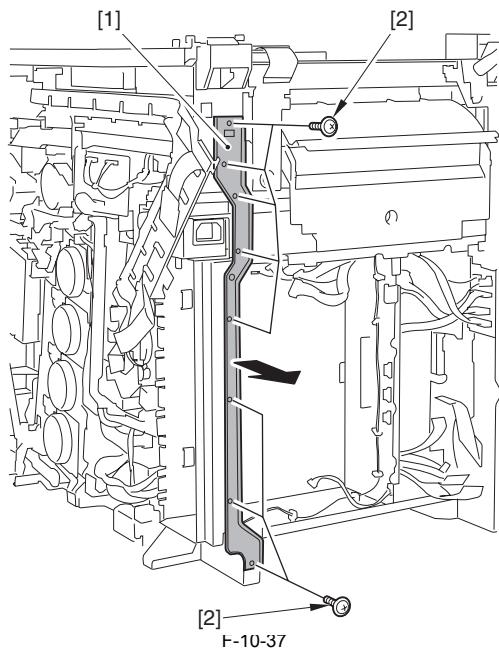

10.5.9.1 Before Removing the Laser Scanner Cover

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

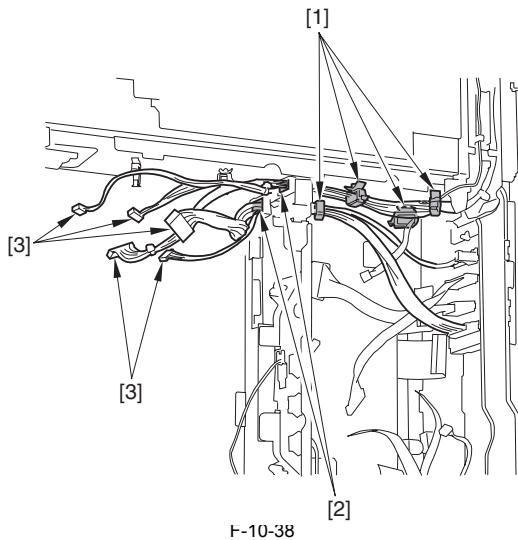

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 4) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]
- 5) Remove the Electrical Components Cover.[\(page 10-15\)](#)Reference [Removing the Electrical Components Cover]
- 6) Remove the Controller Box.[\(page 10-15\)](#)Reference [Removing the Controller Box]
- 7) Remove the Off Hook PCB. (only of the machine with FAX)[\(page 10-25\)](#)Reference [Removing the Off Hook PCB]
- 8) Remove the DC Controller PCB.[\(page 10-22\)](#)Reference [Removing the DC Controller PCB]

10.5.9.2 Removing the Laser Scanner Cover

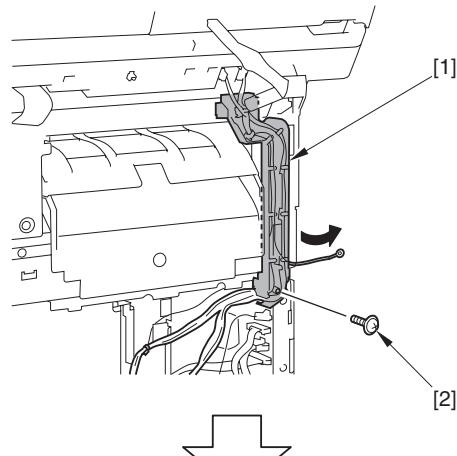

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

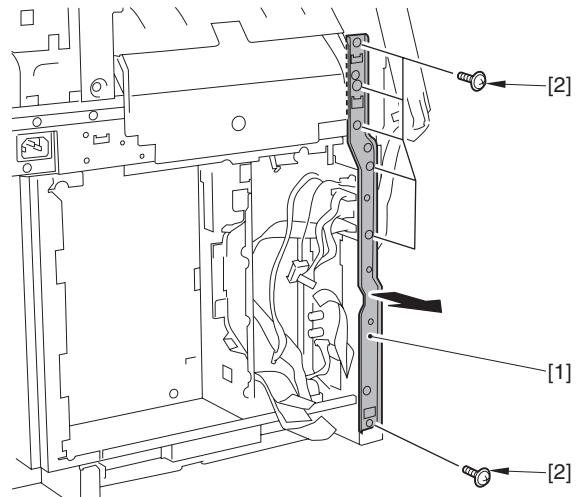

- 3) Open the 4 wire saddles [1] and free the 5 harnesses [3] from the 2 harness guide mouths [2].

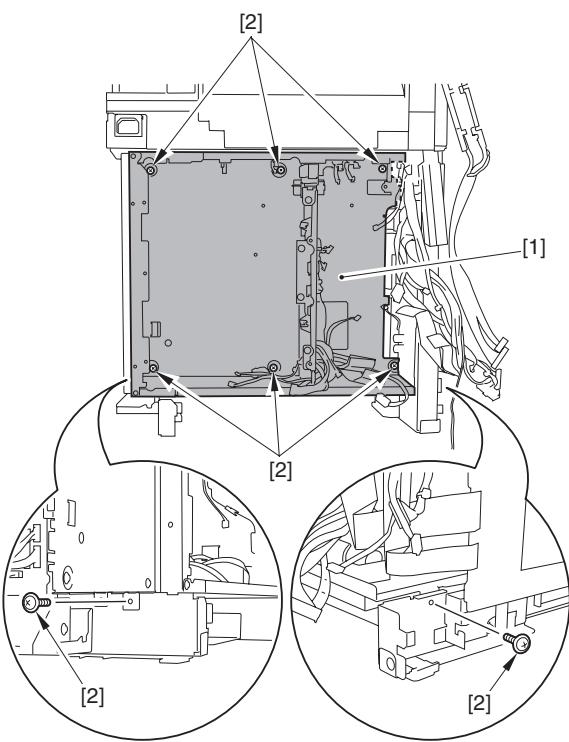

- 4) Remove the harness guide [1].
- 1 screw [2]

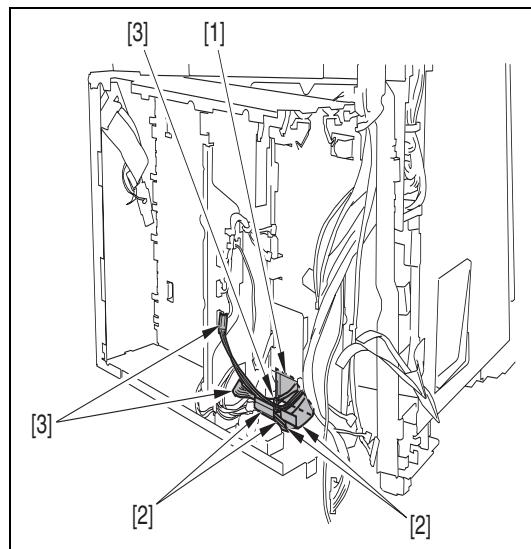

- 5) Remove the left frame reinforcement plate [1].
- 6 screws [2]

- 6) Remove the 8 screws [2] from the laser scanner cover [1].

7) Remove the laser scanner cover [1].
- 2 hooks [2]

10.5.10 Upper Frame Unit

10.5.10.1 Before Removing the Upper Frame Unit

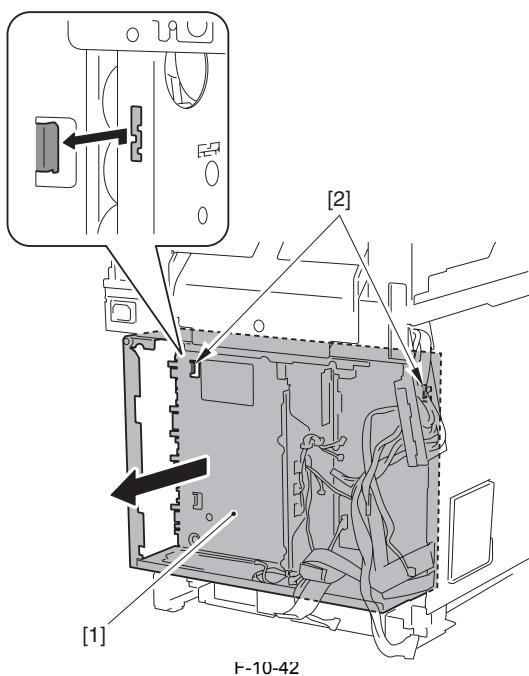

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the fixing assembly.[\(page 9-6\)](#)Reference [Removing the Fixing Assembly]
- 3) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 4) Remove the ADF Unit + Reader Unit.[\(page 4-8\)](#)Reference [Removing the ADF Unit + Reader Unit]
- 5) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 6) Remove the right cover.[\(page 10-11\)](#)Reference [Removing the Right Cover]

10.5.10.2 Removing the Upper Frame Unit

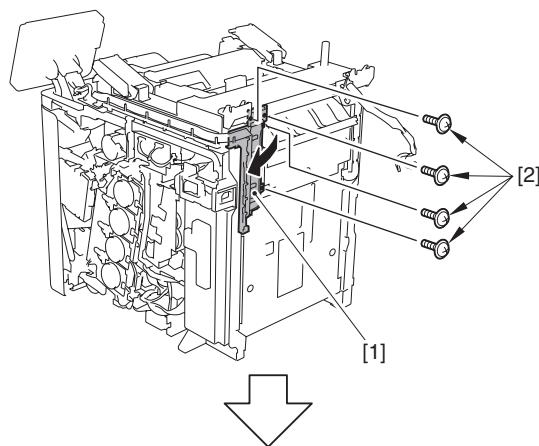

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the harness guide [1].
- 4 screws [2]

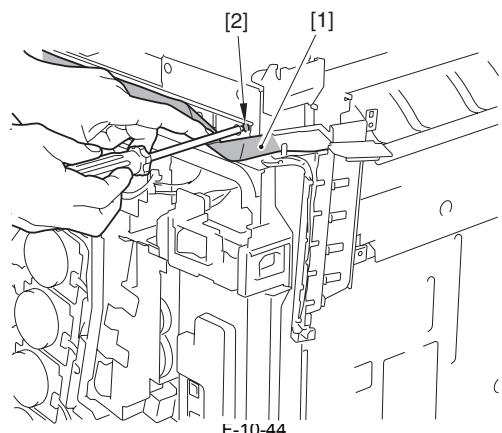

⚠ Point to Note at Installation

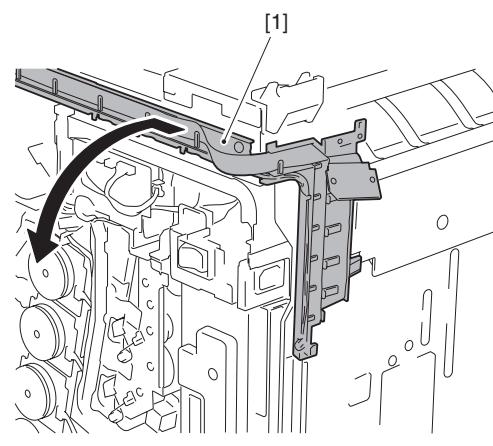

When installing the laser scanner cover, be sure to put the 4 flat cables [2] and the 3 harnesses [3] through the hole [1] of the laser scanner cover in advance.

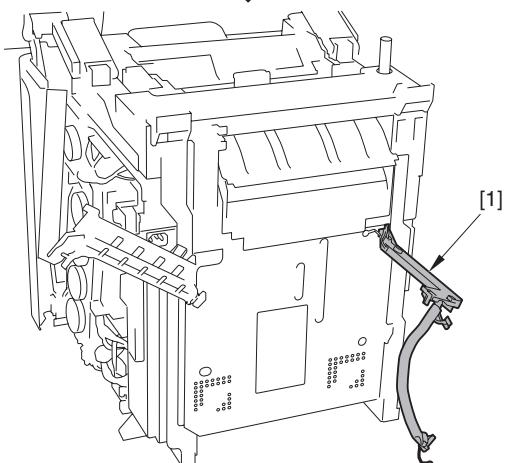

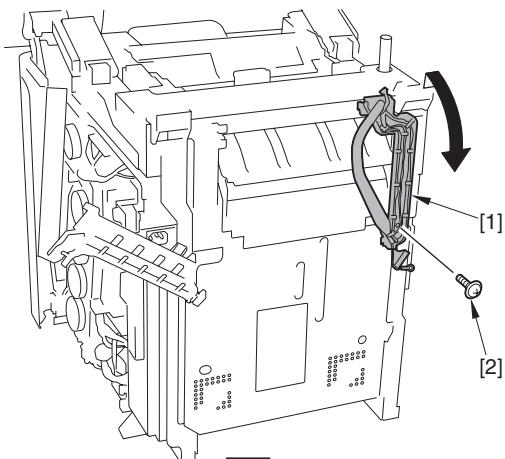

2) Remove the screw [2] on the backside of the flat cable [1].

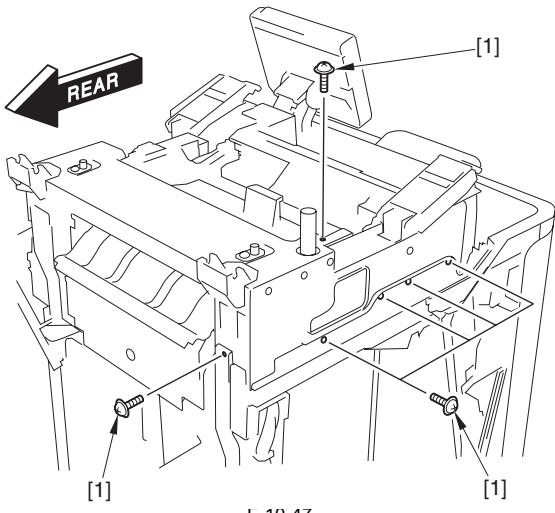

3) Remove the harness guide [1].

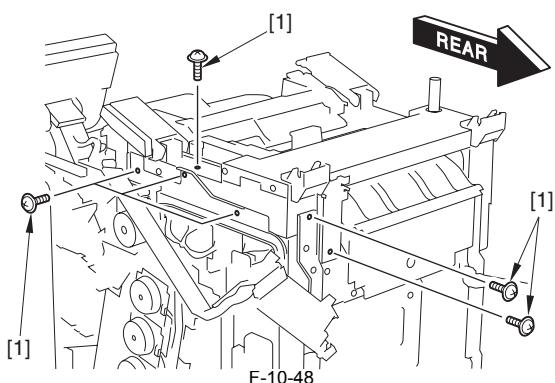

4) Remove the harness guide [1].
- 1 screw [2]

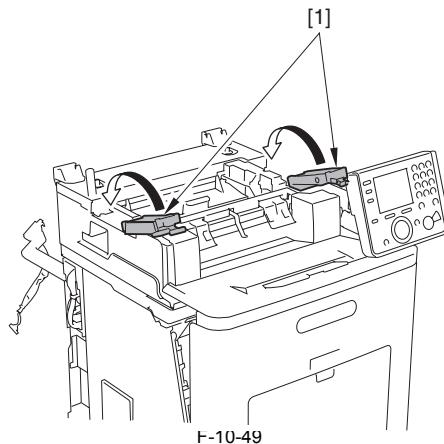

5) Remove the 6 screws [1] (on the left side of the upper frame unit).

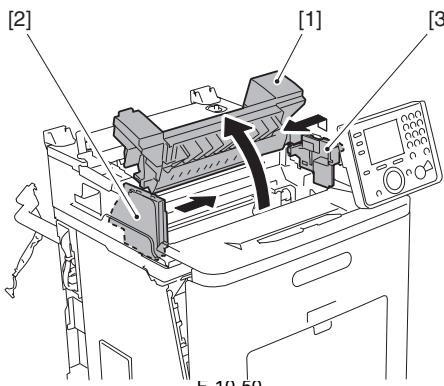

6) Remove the 6 screws [1] (on the right side of the upper frame unit).

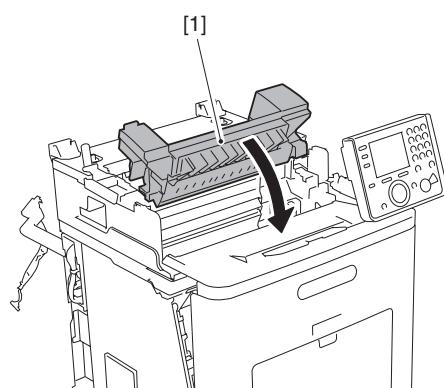

7) Move the 2 reader fixing arms [1] to the rear side.

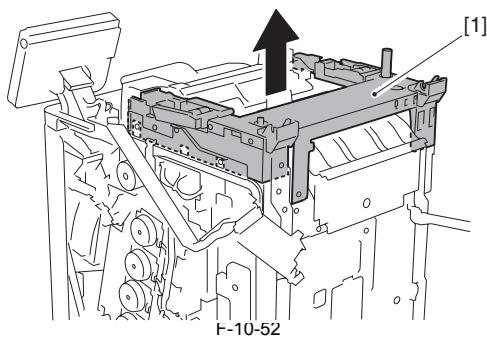

8) Open the fixing delivery cover [1] to remove the left upper front inner cover [2] and the right upper front inner cover [3].

9) Close the fixing delivery cover [1].

10) Remove the upper frame unit [1].

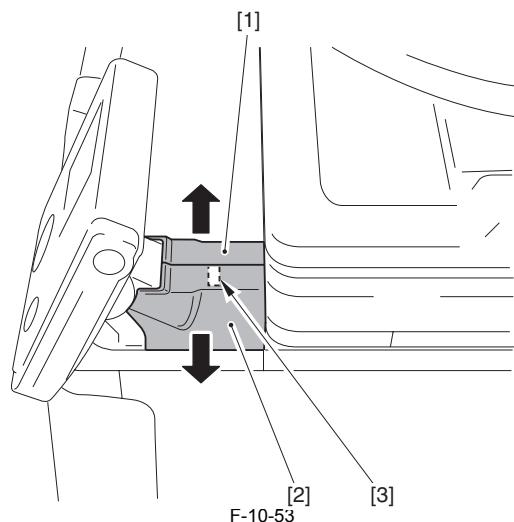

10.5.11 Operation Panel Unit

10.5.11.1 Removing the Control Panel Unit

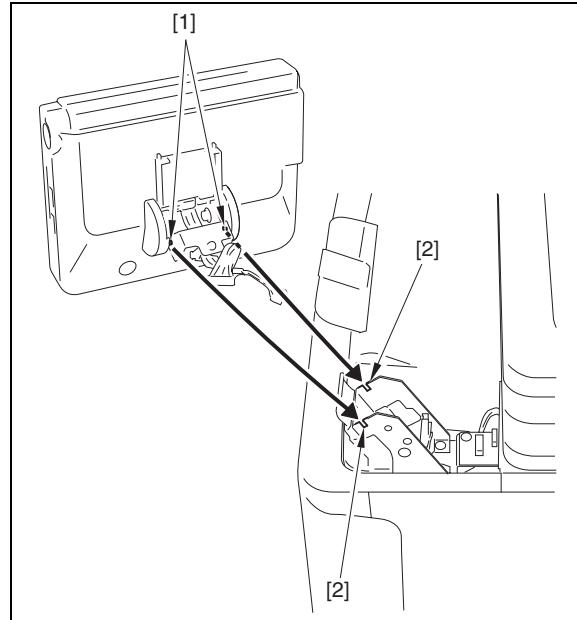

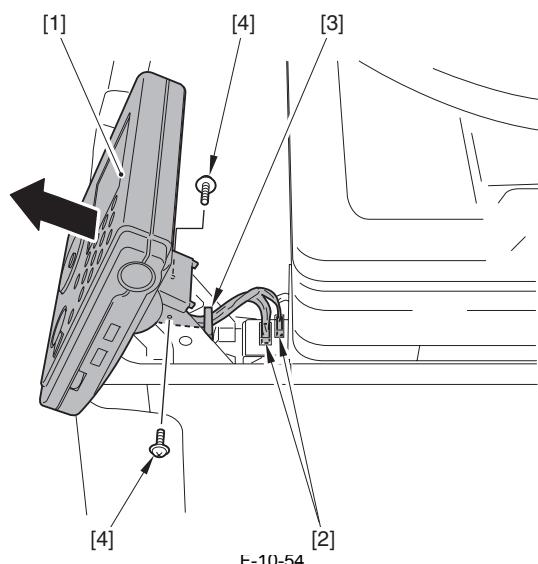

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the panel stand left cover [1] and the panel stand right cover [2].
- 1 claw [3]

- 2) Remove the control panel unit [1].

- 2 connectors [2]
- 1 clamp [3]
- 2 screws [4]

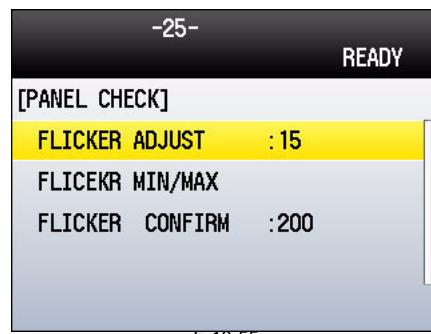

10.5.11.2 Procedure after Replacing the Control Panel

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the control panel, adjust the flicker value of the control panel using the service mode.

- 1) Using the service mode, make the machine display the flicker value adjustment screen for the control panel.
TESTMODE> PANEL> FLICKER CHECK START

- 2) Press the [OK] key.
The flicker value entry screen is displayed.

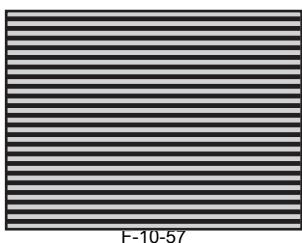

Point to Note at Installation

Be sure to fit the 2 bosses [1] of the control panel unit into the 2 grooves [2] of the stand to install.

3) Press the [OK] key.

The flicker adjustment pattern (a pattern with horizontal stripes) is displayed in the LCD.
Pressing the right/left arrow keys, search for the area with the minimum flicker.

F-10-57

4) Press the [OK] key.

5) Press the [Back] key.

The service mode operation is terminated.

10.5.12 NCU Board**10.5.12.1 Before Removing the NCU PCB**

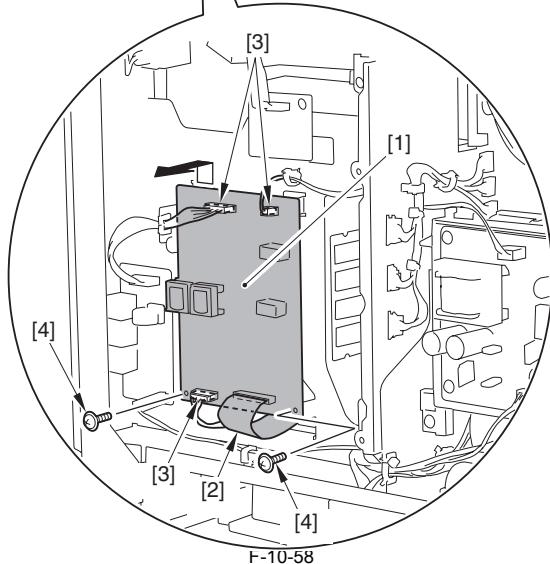

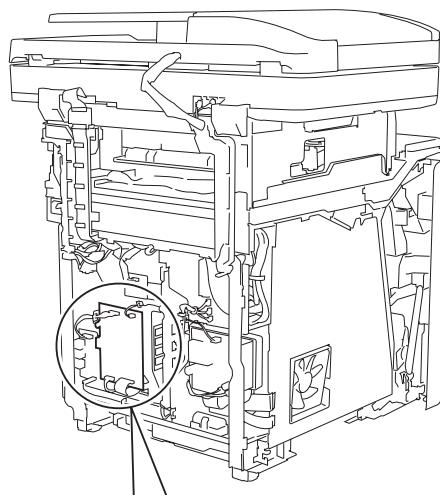

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#)) Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit. ([page 10-11](#)) Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover. ([page 10-13](#)) Reference [Removing the Left Cover]
- 4) Remove the Electrical Components Cover. ([page 10-15](#)) Reference [Removing the Electrical Components Cover]

10.5.12.2 Removing the NCU PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the NCU PCB.
 - 1 flat cable [2]
 - 3 connectors [3]
 - 2 screws [4]

F-10-58

10.5.13 DC Controller PCB**10.5.13.1 Before Removing the DC Controller PCB**

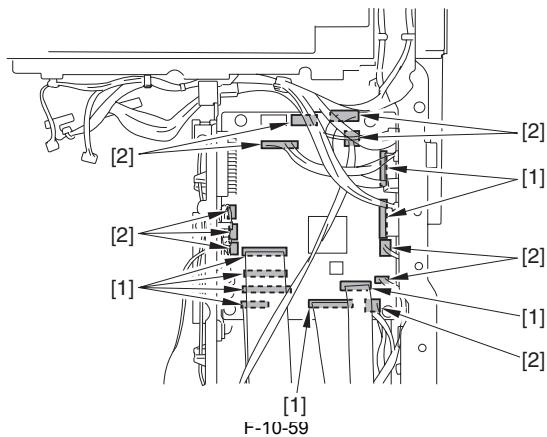

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit. ([page 7-31](#)) Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit. ([page 10-11](#)) Reference [Removing the Rear Cover Unit]

10.5.13.2 Removing the DC Controller PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Disconnect the 8 flat cable connectors [1] and the 10 connectors [2].

- 2) Remove the DC controller PCB [1].
- 4 screws [2]

10.5.13.3 Procedure after Replacing the DC controller PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the DC controller PCB, restore the backup data from the main controller PCB.

- 1) Using the service mode, restore the backup data of the DC controller stored in NVRAM of the main controller PCB to NVRAM of the DC controller PCB.
COPIER> FUNCTION> VIFFNC> RSTR-DCN
- 2) Execute "Initial Setting/Registration > Adjustment/Cleaning > Automatic Gradation Correction > Full Correction".

10.5.14 Memory Controller PCB

10.5.14.1 Before Removing the Memory Controller PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

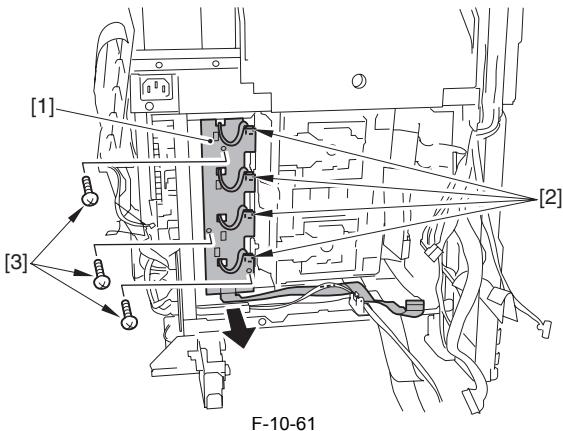

- 1) Remove the ETB unit.(page 7-31)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.(page 10-11)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.(page 10-13)Reference [Removing the Left Cover]

- 5) Remove the Electrical Components Cover.(page 10-15)Reference [Removing the Electrical Components Cover]
- 6) Remove the Controller Box.(page 10-15)Reference [Removing the Controller Box]
- 7) Remove the Off Hook PCB. (only of the machine with FAX)(page 10-25)Reference [Removing the Off Hook PCB]
- 8) Remove the DC Controller PCB.(page 10-22)Reference [Removing the DC Controller PCB]
- 9) Remove the Laser Scanner Cover.(page 10-16)Reference [Removing the Laser Scanner Cover]

10.5.14.2 Removing the Memory Controller PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the memory controller PCB [1].

- 4 connectors [2]
- 3 screws [3]

10.5.15 Duplexing Driver PCB

10.5.15.1 Before Removing the Duplex Driver PCB

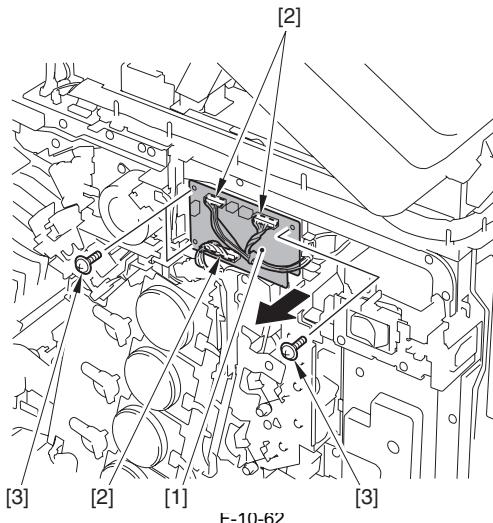

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.(page 7-31)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.(page 10-11)Reference [Removing the Rear Cover Unit]
- 3) Remove the right cover.(page 10-11)Reference [Removing the Right Cover]

10.5.15.2 Removing the Duplex Driver PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the duplex driver PCB [1].
- 3 connectors [2]
- 3 screws [3]

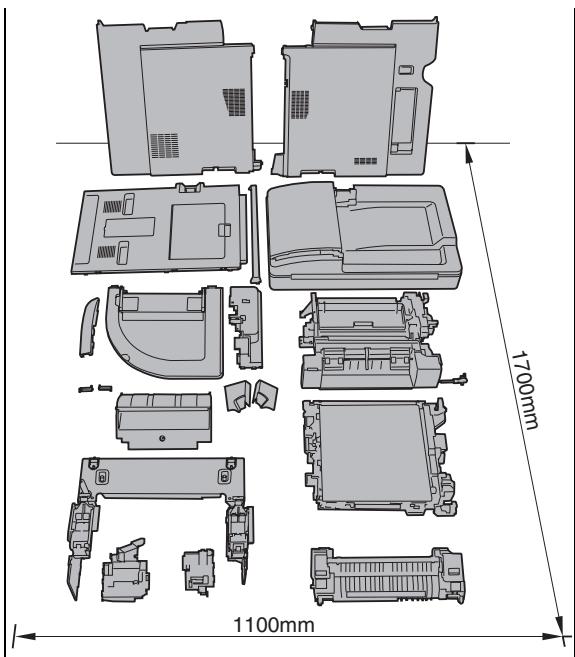

10.5.16 Low-voltage Power Supply PCB

10.5.16.1 Before Removing the Low-Voltage Power Supply PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

MEMO:

19 parts (e.g.: external cover, unit) need to be removed when removing the low voltage power supply PCB. Be sure to have enough space equivalent to 1,700mm x 1,100mm for storing parts.

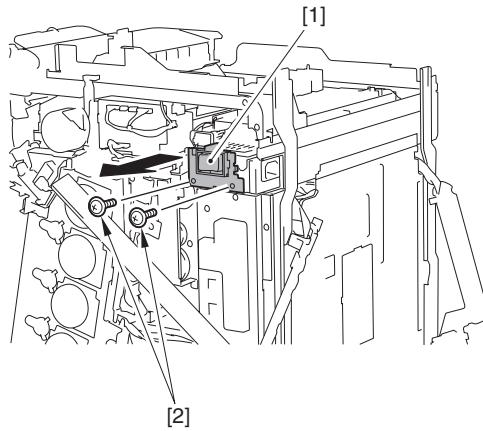

- 1) Remove the ETB unit.([page 7-31](#))Reference [Removing the ETB Unit]
- 2) Remove the fixing assembly.([page 9-6](#))Reference [Removing the Fixing Assembly]
- 3) Remove the rear cover unit.([page 10-11](#))Reference [Removing the Rear Cover Unit]
- 4) Remove the ADF Unit + Reader Unit.([page 4-8](#))Reference [Removing the ADF Unit + Reader Unit]
- 5) Remove the left cover.([page 10-13](#))Reference [Removing the Left Cover]
- 6) Remove the right cover.([page 10-11](#))Reference [Removing the Right Cover]
- 7) Remove the Upper Frame Unit.([page 10-18](#))Reference [Removing the Upper Frame Unit]
- 8) Remove the Reversal Unit.([page 8-28](#))Reference [Removing the Reversal Unit]

10.5.16.2 Removing the Low Voltage Power Supply PCB

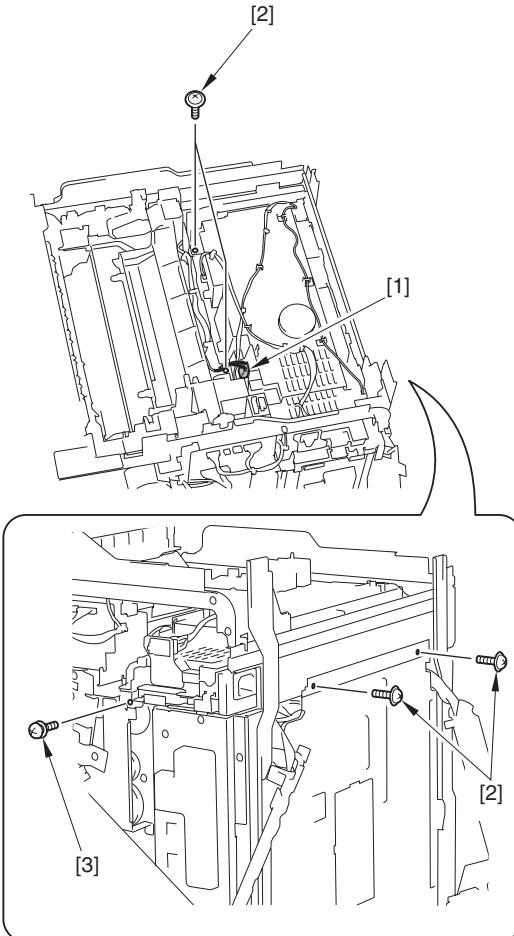

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the switch button unit [1].
- 2 screws [2]

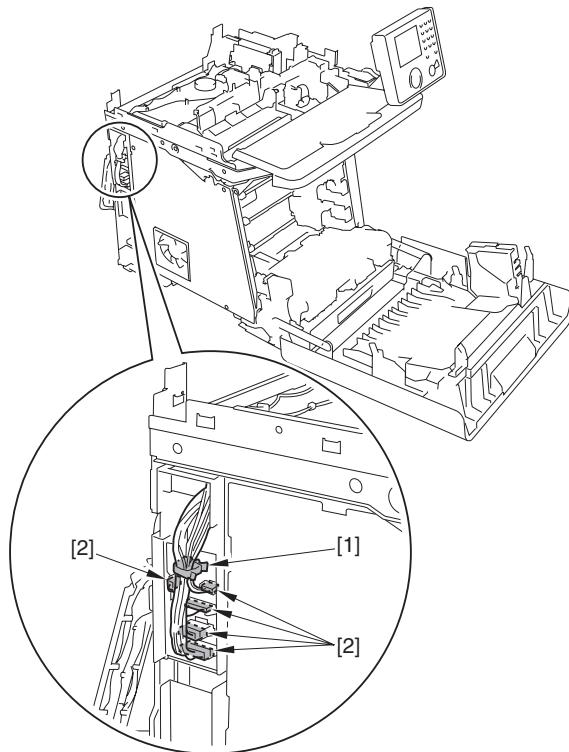

F-10-63

- 2) Disconnect the connector [1] and remove the 4 screws (TP) [2] and the screw (with washer) [3].

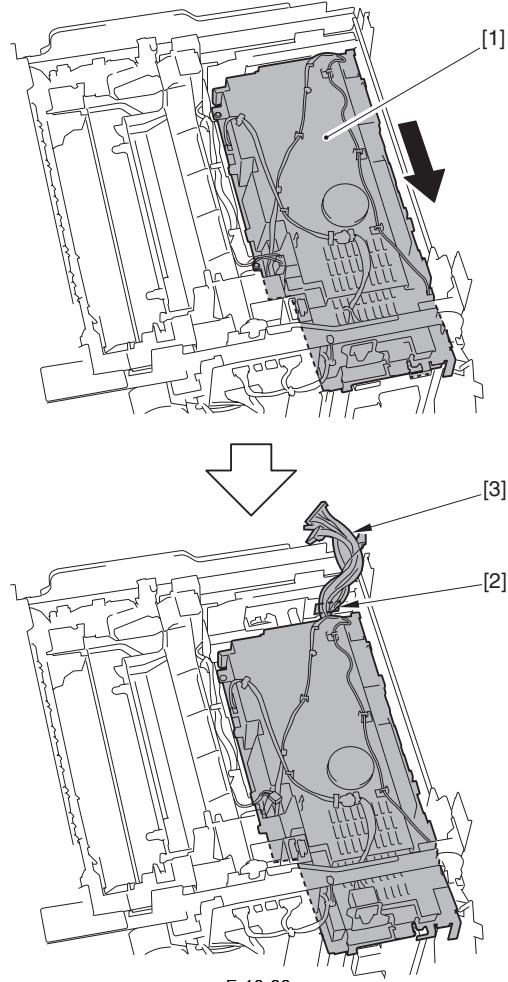

F-10-64

- 3) Remove the wire saddle [1] and disconnect the 5 connectors [2].

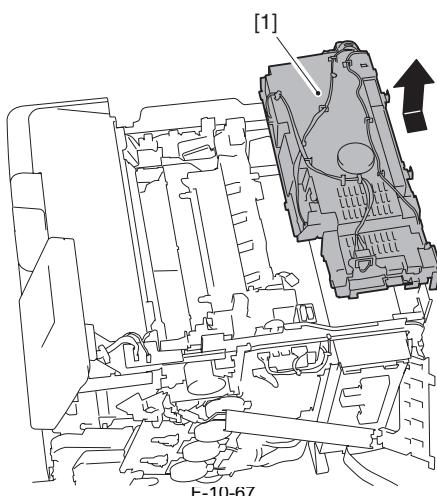

F-10-65

- 4) Move the low voltage power supply PCB [1] in the direction of the arrow, and free the 5 harnesses [3] from the harness guide hole [2].

5) Remove the low voltage power supply PCB [1].

10.5.17 High-voltage Power Supply PCB

10.5.17.1 Before Removing the High Voltage Power Supply PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

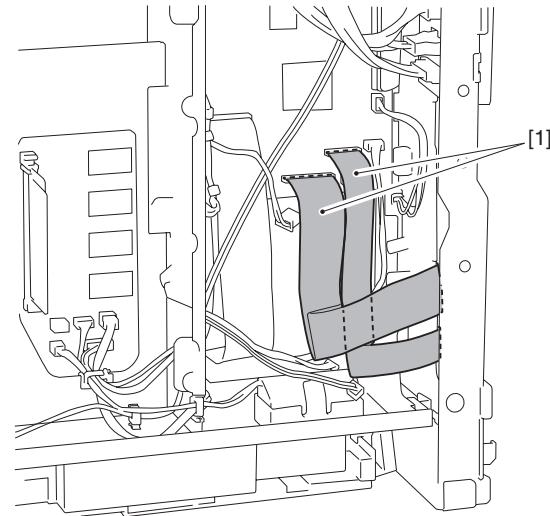

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 4) Remove the Electrical Components Cover.[\(page 10-15\)](#)Reference [Removing the Electrical Components Cover]

- 5) Remove the Off Hook PCB. (only of the machine with FAX)[\(page 10-25\)](#)Reference [Removing the Off Hook PCB]

10.5.17.2 Removing the High Voltage Power Supply PCB

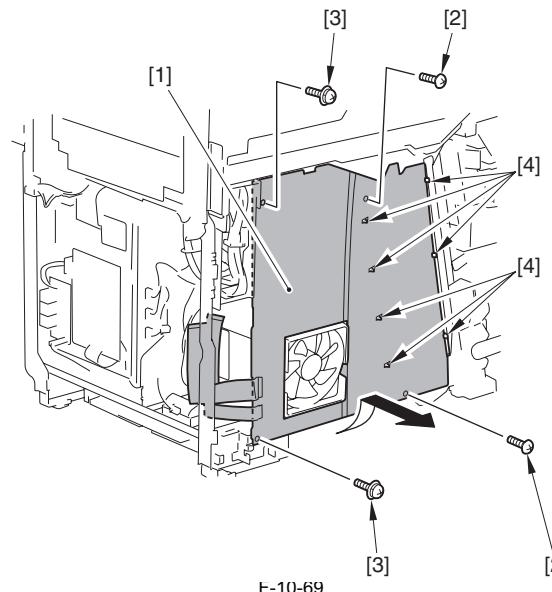

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Disconnect the 2 flat cables [1].

- 2) Remove the high voltage power supply PCB [1].

- 2 screws (binding) [2]
- 2 screws (double SEMS) [3]
- 7 claws [4]

10.5.18 Off Hook PCB

10.5.18.1 Before Removing the Off Hook PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 4) Remove the Electrical Components Cover.[\(page 10-15\)](#)Reference [Removing the Electrical Components Cover]

10.5.18.2 Removing the Off Hook PCB

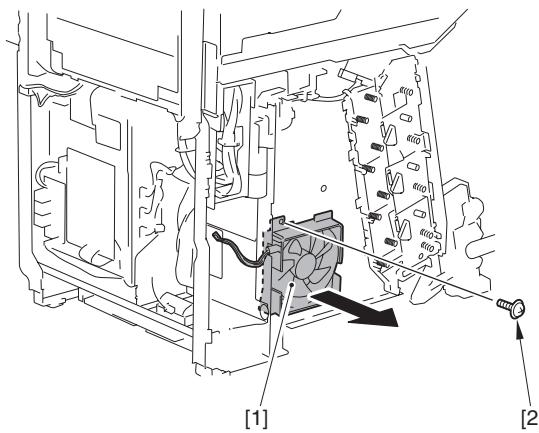

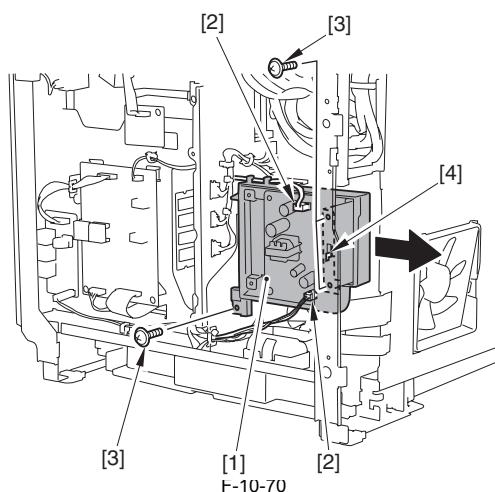

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the Off Hook PCB unit [1].

- 2 connectors [2]

- 3 screws [3]

- 1 hook [4]

3) Remove the grounding spring [1].

10.5.19 Cooling Fan

10.5.19.1 Before Removing the Cooling Fan

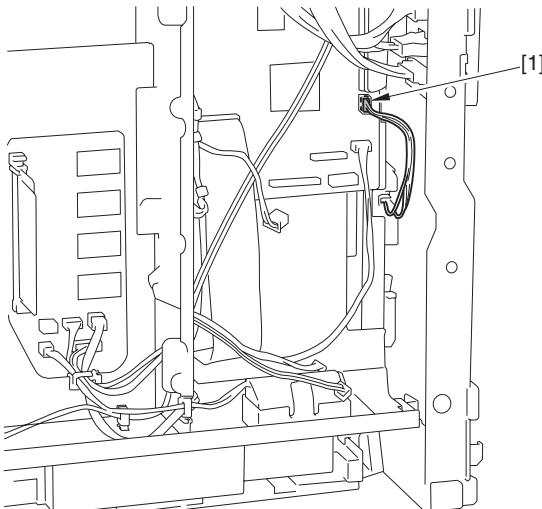

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]
- 2) Remove the rear cover unit.[\(page 10-11\)](#)Reference [Removing the Rear Cover Unit]
- 3) Remove the left cover.[\(page 10-13\)](#)Reference [Removing the Left Cover]
- 4) Remove the Electrical Components Cover.[\(page 10-15\)](#)Reference [Removing the Electrical Components Cover]
- 5) Remove the Off Hook PCB. (only of the machine with FAX)[\(page 10-25\)](#)Reference [Removing the Off Hook PCB]
- 6) Removing the High Voltage Power Supply PCB.[\(page 10-25\)](#)Reference [Removing the High Voltage Power Supply PCB]

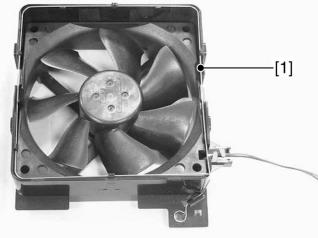

10.5.19.2 Removing the Cooling Fan

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Disconnect the connector [1].

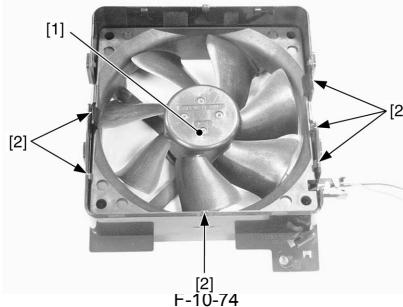

- 2) Remove the cooling fan unit [1].
- 1 screw [2]

F-10-73

- 4) Remove the heat exhaust fan [1].
- 6 claws [2]

10.5.20 Duplex Fan

10.5.20.1 Before Removing the Duplex Fan

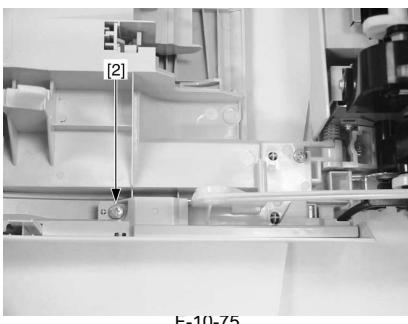

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the ETB unit.[\(page 7-31\)](#)Reference [Removing the ETB Unit]

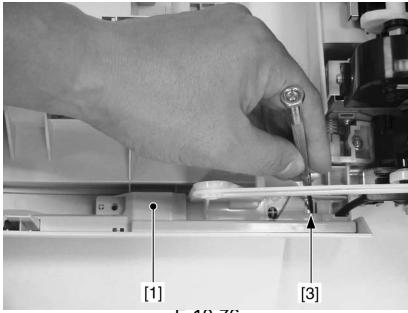

10.5.20.2 Removing the Duplex Fan

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Remove the cable cover [1].
- 1 screw [2]
- 1 claw [3]

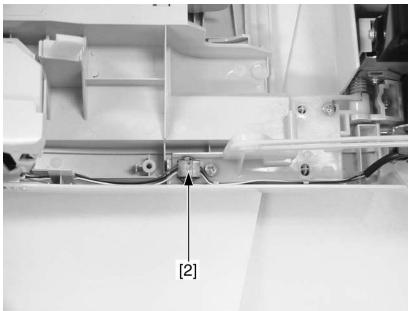

F-10-75

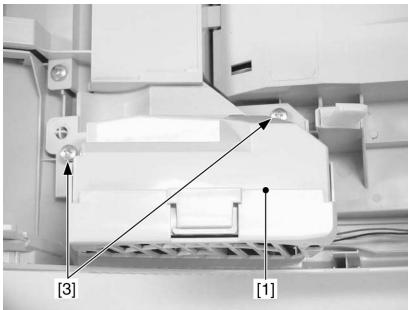

F-10-76

2) Remove the duplex fan unit [1].

- 1 connector [2]
- 2 screws [3]

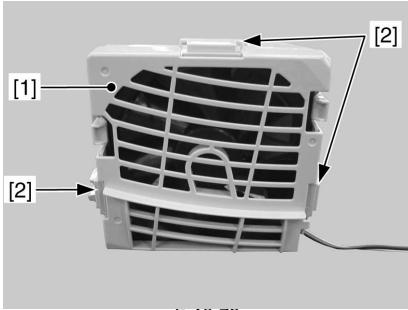

F-10-77

F-10-78

3) Remove the fan cover [1] to remove the duplex fan.

- 3 claws [2]

F-10-79

Contents

11.1 Periodically Replaced Parts	11-1
11.1.1 Periodically Replaced Parts.....	11-1
11.2 Consumables.....	11-1
11.2.1 Expected Service Life of Consumable Parts	11-1
11.3 Periodical Service	11-1
11.3.1 Periodic Service.....	11-1

11.1 Periodically Replaced Parts

11.1.1 Periodically Replaced Parts

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

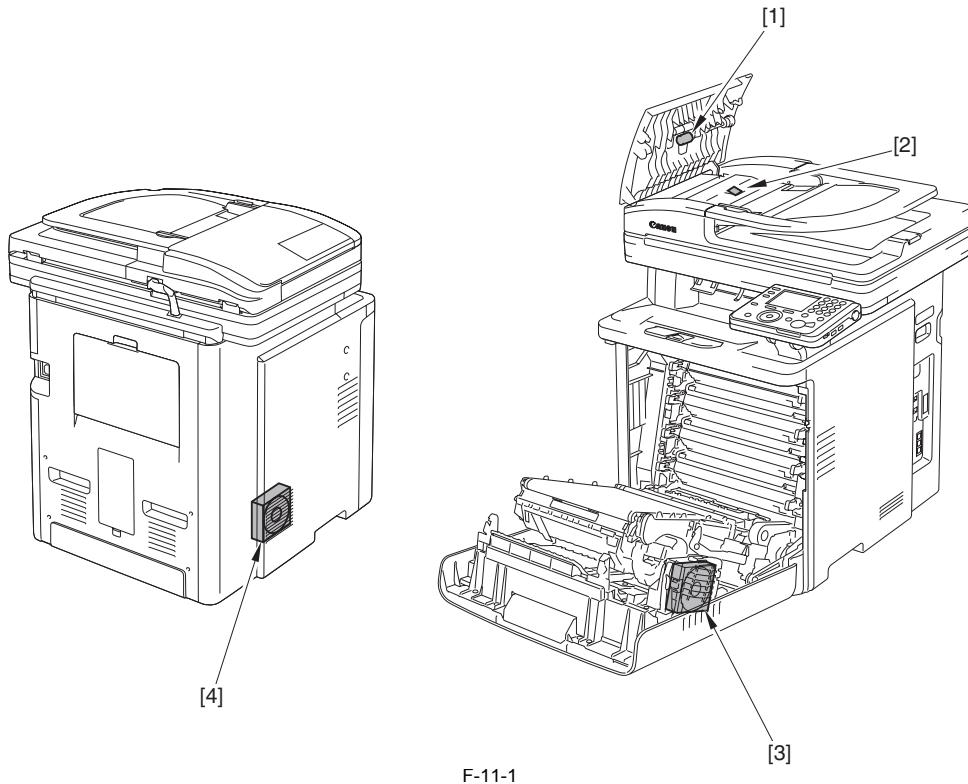

This machine does not have parts that require periodical replacement.

11.2 Consumables

11.2.1 Expected Service Life of Consumable Parts

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Some parts of the machine are likely to require replacement once or more because of wear or damage. Replace them when they are found to be faulty by referring to the following table:

F-11-1
T-11-1

No.	Parts name	Parts No.	Q'ty	Replacement Timing
[1]	ADF separation roller	FL2-6637	1	50,000 sheets
[2]	ADF separation pad	FC7-6297	1	50,000 sheets
[3]	Duplex fan	RK2-0954	1	25,000 hours
[4]	Main body fan	RK2-0954	1	25,000 hours

*: The estimated life in the case of continuous power distribution at 24 hours/day for 25,000 hours is nearly equivalent to 3 years.
(It is nearly equivalent to 5 years in the case of power distribution at 14 hours/day.)

11.3 Periodical Service

11.3.1 Periodic Service

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

This machine does not have parts that require periodic servicing.

12.4 ADF	12-2
12.4.1 Outline	12-2
12.4.1.1 Procedure after Replacing the ADF Unit.....	12-2

12.1 Scanning System

12.1.1 Procedure after Replacing the Copyboard Glass

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the copyboard glass, enter the correction values (X, Y, Z) of the standard white plate which are indicated on the back of the new copyboard glass in the service mode.

Correction value (X):

Service mode> COPIER> ADJUST> CCD> W-PLT-X

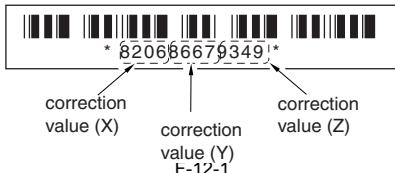

Correction value (Y):

Service mode> COPIER> ADJUST> CCD> W-PLT-Y

Correction value (Z):

Service mode> COPIER> ADJUST> CCD> W-PLT-Z

Also, rewrite the values in the service book.

12.1.2 Procedure after Replacing the Reader Unit

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the reader unit, execute automatic detection of the CCD reading position at ADF stream reading in the following service mode.

COPIER> FUNCTION> INSTALL> STRD-POS

[Operation]

Adjust the reading position by moving the scanner in increments of 0.1 mm.

[Time]

When the lamp is turned on: Adjustment time; 10 seconds
When the lamp is not turned on: Lamp adjustment time; 10 to 30 seconds
+ Adjustment time; 10 seconds

12.2 Fixing System

12.2.1 Checking the Nip Width (fixing pressure roller)

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

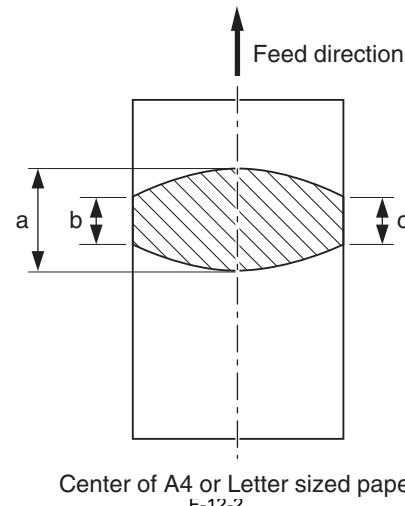

When removing a paper, be sure to turn on the power supply and remove it after checking that jam has occurred in the machine.
Take notice that removing a paper with no jam occurred in the machine may cause a broken fixing film.

An incorrect nip width may cause the faulty fixing.

Check the nip width by following the procedure below if poor fixing image defect occurs.

- 1) Make an all solid black print of A4 or Letter size using a toner cartridge same as for this machine, and take the print to the customer's site.
- 2) Place the solid black print, with the printed side facing DOWN, in the cassette of the printer.
- 3) Press the test print switch.
- 4) Open the upper cover as soon as the leading edge of the paper appears in the delivery slot. Leave it for ten seconds.
- 5) Turn OFF the machine and take fixing unit from the machine. Then take the paper out from the fixing unit.
- 6) Measure the width of the glossy band across the paper and check that it meets the requirements as shown in Figure.
 - Center (a): 8 +/- 1.0 mm
 - Difference between right/left and center (a-b, a-c): 0 to 1 mm
 - Difference between right and left (|b-c|): 1.5 mm or less

Center of A4 or Letter sized paper
F-12-2

Replace the fixing unit if the nip width is out of specification, since the nip width of the fixing unit is not adjustable in this machine.

12.3 Electrical Components

12.3.1 Procedure after Replacing the DC controller PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the DC controller PCB, restore the backup data from the main controller PCB.

- 1) Using the service mode, restore the backup data of the DC controller stored in NVRAM of the main controller PCB to NVRAM of the DC controller PCB.
COPIER> FUNCTION> VIFFNC> RSTR-DCN
- 2) Execute "Initial Setting/Registration > Adjustment/Cleaning > Automatic Gradation Correction > Full Correction".

12.3.2 Procedure after Replacing the Main Controller PCB

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the main controller PCB with new one, perform the following procedure.

1. Backup the user data

Import the user data using the remote UI.

The machine does not support "Import/export via USB" (provided in the following service SW) because it supports network as standard function.
COPIER->FUNCTION->PARAM->SYS-SW->Bit Switch->SW 02 Bit6

2. Enter the flicker adjustment value of the control panel

- 1) Using the service mode, check the flicker value of the control panel.
TESTMODE> PANEL> FLICKER CHECK START> FLICKER ADJUST

MEMO:

The flicker adjustment value can be also checked in the spec list (FLICKER ADJ PRM).

How to output the spec list: COPIER> FUNCTION> MISC-P> OUTPUT> SPEC

- 2) Replace the main controller PCB.

- 3) Using the service mode, enter the adjustment value checked in Step 1).
TESTMODE> PANEL> FLICKER CHECK START> FLICKER ADJUST

- 4) Using the user mode, execute automatic gradation correction (full correction).
Initial Setting/Registration> Adjustment/Cleaning> Automatic Gradation Correction> Full Correction

12.3.3 Procedure after Clearing RAM Data

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After clearing the RAM data (ALL CLEAR) in the main controller PCB, perform the following procedure.

1. Backup the user data

Import the user data using the remote UI.

The machine does not support "Import/export via USB" (provided in the following service SW) because it supports network as standard function.
COPIER->FUNCTION->PARAM->SYS-SW->Bit Switch->SW 02 Bit6

2. Enter the flicker adjustment value of the control panel

- 1) Using the service mode, check the flicker value of the control panel.
TESTMODE> PANEL> FLICKER CHECK START> FLICKER ADJUST

MEMO:

The flicker adjustment value can be also checked in the spec list (FLICKER ADJ PRM).
How to output the spec list: COPIER> FUNCTION> MISC-P> OUTPUT> SPEC

- 2) Replace the main controller PCB.
- 3) Using the service mode, enter the adjustment value checked in Step 1).
TESTMODE> PANEL> FLICKER CHECK START> FLICKER ADJUST
- 4) Using the user mode, execute automatic gradation correction (full correction).
Initial Setting/Registration> Adjustment/Cleaning> Automatic Gradation Correction> Full Correction

12.3.4 Procedure after Replacing the Control Panel

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

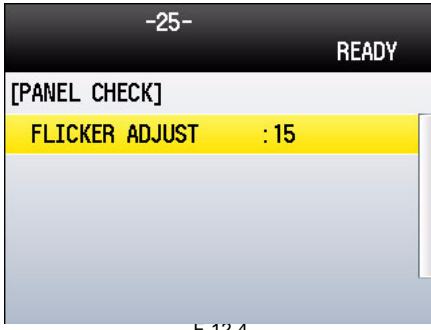

After replacing the control panel, adjust the flicker value of the control panel using the service mode.

- 1) Using the service mode, make the machine display the flicker value adjustment screen for the control panel.
TESTMODE> PANEL> FLICKER CHECK START

F-12-3

- 2) Press the [OK] key.
The flicker value entry screen is displayed.

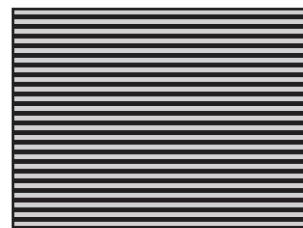

F-12-4

- 3) Press the [OK] key.

The flicker adjustment pattern (a pattern with horizontal stripes) is displayed in the LCD.

Pressing the right/left arrow keys, search for the area with the minimum flicker.

F-12-5

- 4) Press the [OK] key.

- 5) Press the [Back] key.

The service mode operation is terminated.

12.4 ADF**12.4.1 Outline****12.4.1.1 Procedure after Replacing the ADF Unit**

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

After replacing the ADF unit, execute automatic detection of the CCD reading position at ADF stream reading in the following service mode.

COPIER> FUNCTION> INSTALL> STRD-POS

[Operation]

Adjust the reading position by moving the scanner in increments of 0.1 mm.

[Time]

When the lamp is turned on: Adjustment time; 10 seconds

When the lamp is not turned on: Lamp adjustment time; 10 to 30 seconds
+ Adjustment time; 10 seconds

13.1 Initial Checkup

13.1.1 Initial Check

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Check the following items before you diagnose malfunction. If any failure is found, a service engineer is to clear the problem and to give the instruction to a user.

Installation environment

- The power voltage is $-/+10\%$ of the rated voltage.
- The machine is securely installed on a level surface.
- The room temperature is kept between 10 and 30 deg C, and the relative humidity, between 10 and 80 %.
- Avoid sites generating ammonia gas, high temperature or high humidity (near water faucet, kettle, or humidifier), cold places, open flames, dusty area and sites the wind blows in from the air-conditioning duct.
- Avoid sites exposed to direct sunlight. If unavoidable, advise the customer to hang curtains.
- A well-ventilated place.
- Make sure that the power cord is inserted to the machine and the outlet securely.

Paper checks

- The recommended paper for the printer is used.
- Paper is not damp.
- Paper is not dirty.

Paper sets

- The amount of paper in the pick-up source is within specifications.
- Paper is correctly set on the selected pick-up source.
- The size guides are aligned with paper.

Cartridge sets

Make sure the toner cartridges in each color are set in the machine properly.

Fixing unit sets

Make sure the fixing unit is set in the machine properly.

External cover sets

Make sure the front cover is closed securely.

Condensation

During winter, if the machine is brought from a cold place such as a warehouse into a warm room, condensation will appear inside the machine, causing various problems.

Ex.)

- a. Condensation in the optical system (polygon mirror, reflective mirror, lens, etc.) will result in a light print image.
- b. As the photosensitive drum is cold, the resistance of the photoconductive layer is high; this will lead to incorrect contrast.

If condensation appears, either wipe the parts with dry cloth, or leave the printer on for 10 to 20 minutes.

If the toner cartridges are opened soon after being moved from a cold room to a warm room, condensation may appear inside the cartridge and may cause various problems.

Be sure to instruct the user that it is necessary to leave the printer for one to two hours at a room temperature to allow it to acclimatize to the temperature.

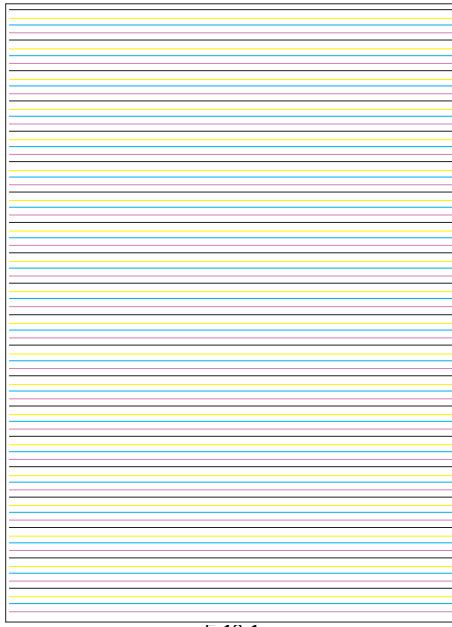

13.2 Test Printing

13.2.1 Test Printing

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

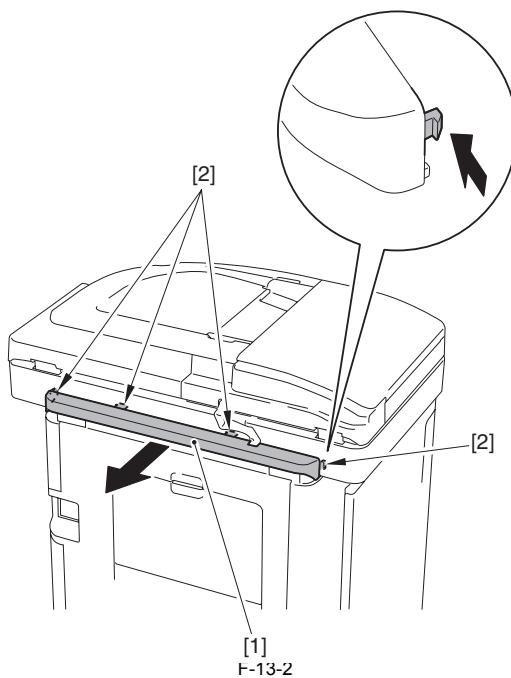

You can check with test prints if the printer engine works normally.

When pressing the test print switch at the DC controller PCB with the machine in standby mode, a test pattern (horizontal lines) is printed. This test print can be executed without the main controller PCB.

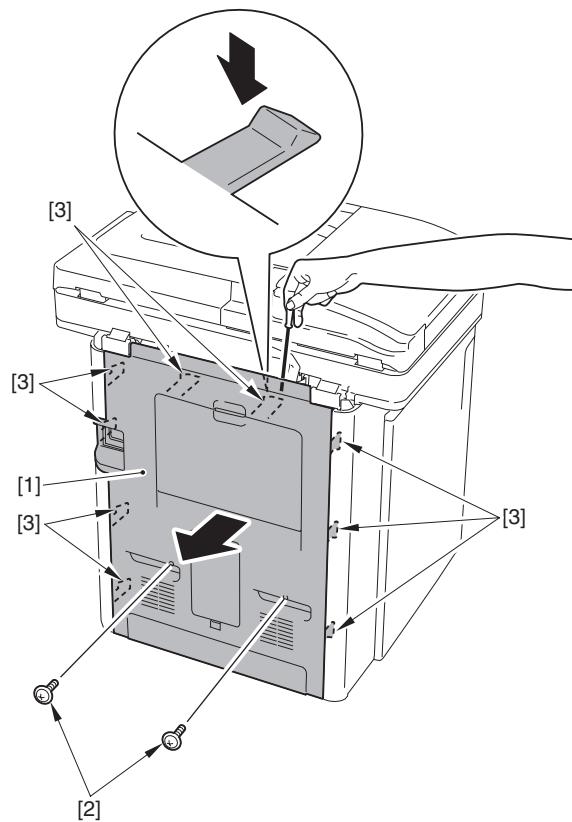

Implementation procedure

- 1) Remove the reader hinge cover [1].
 - 4 claws [2]

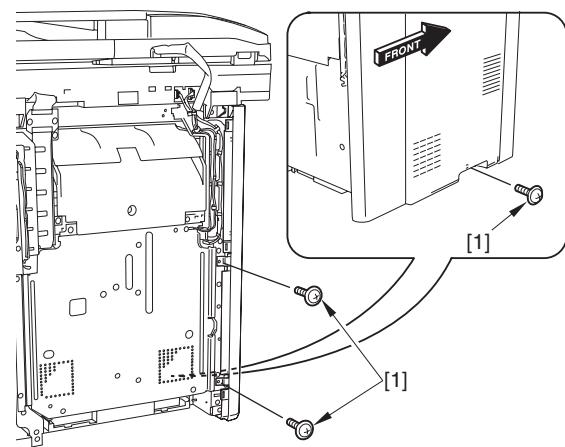

2) Remove the rear cover unit [1].

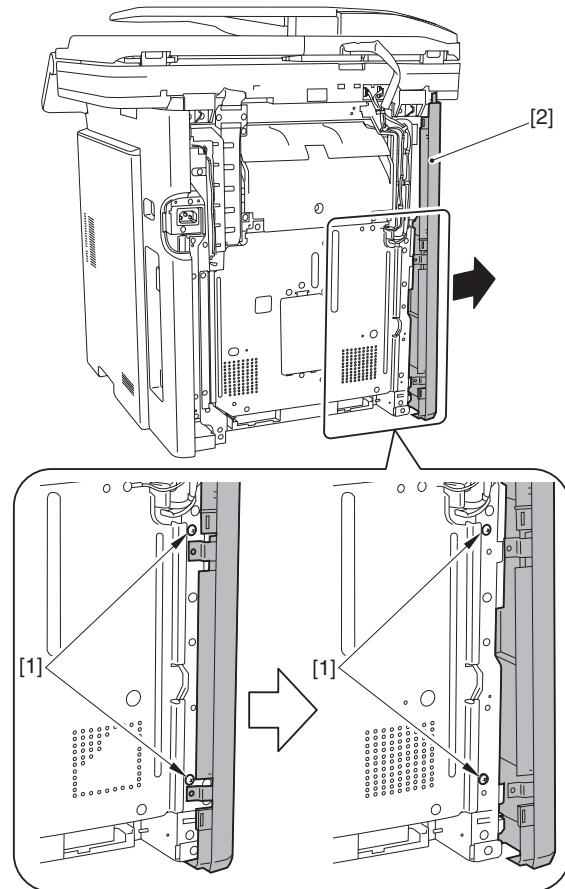

- 2 screws [2]
- 9 claws [3]

3) Remove the 3 screws [1].

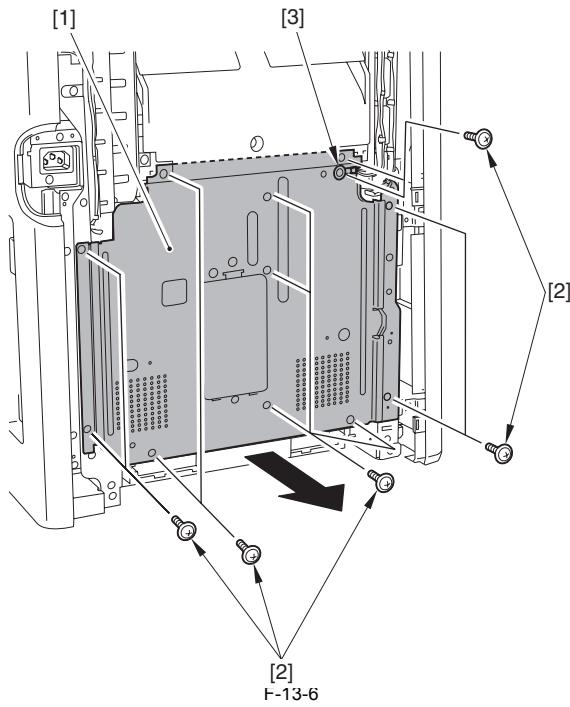

- 4) Move the left cover [2] to the position where the 2 screws [1] of the power unit cover can be removed.

F-13-5

- 5) Remove the power unit cover [1].
 - 12 screws [2]
 - 1 terminal [3]

F-13-6

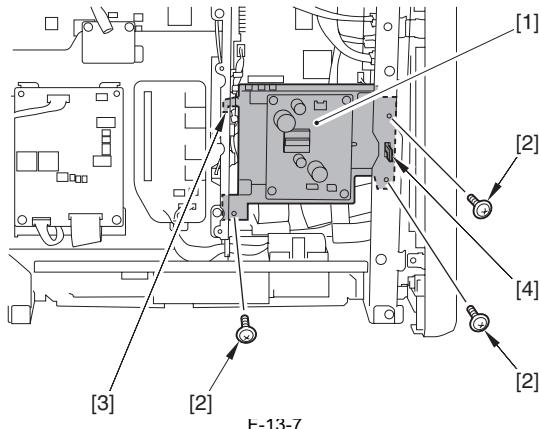

6) Remove the off-hook unit [1] without disconnecting the connector.

- 3 screws (TP; M3X6) [2]
- 1 hook [3]
- 1 hook [4]

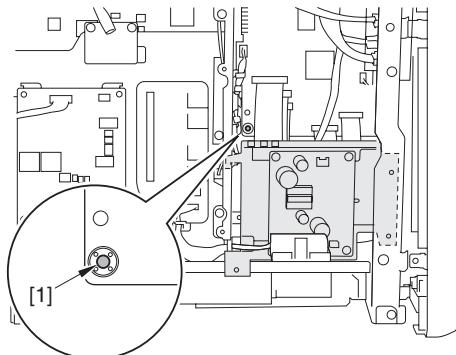

Points to Note When Removing the Off-Hook Unit

Be careful not to pull strongly the cable connected with the off-hook unit and break it. It is enough to move the off-hook unit downward so that the test print switch at the rear side can be seen.

F-13-7

7) Press the test print switch [1].

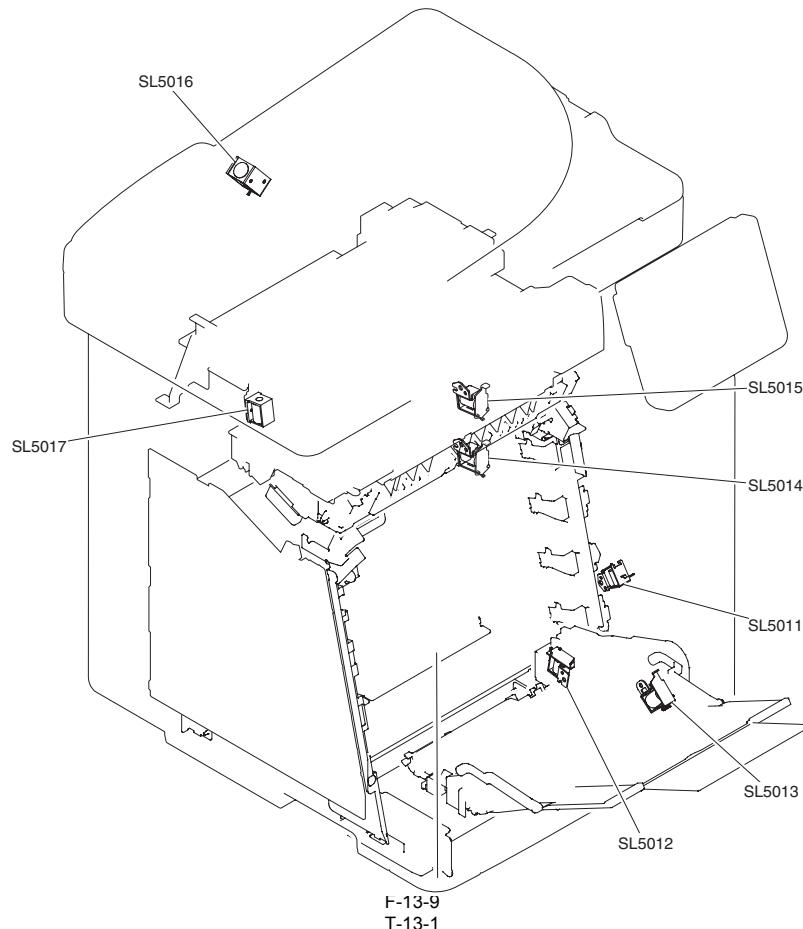

F-13-8

13.3 Outline of Electrical Components

T-14-1

Error Code	Detail Code	Error Name/Explanation of Error
E000	0000	Fixing temperature abnormal rise
E001	0000	Fixing unit temperature rise detection (by main thermistor)
	0001	Fixing unit temperature rise detection (by sub thermistor)
E003	0000	Fixing unit temperature insufficient rise (by main thermistor)
	0001	Fixing unit temperature insufficient rise (by sub thermistor)
E004	0000	Error in fixing power supply drive circuit
E012	0000	ETB motor fails to run.
	0001	ETB motor runs but then stops running.
	0002	Drum Y motor fails to run.
	0003	Drum Y motor runs but then stops running.
	0004	Drum M motor fails to run.
	0005	Drum M motor runs but then stops running.
	0006	Drum C motor fails to run.
	0007	Drum C motor runs but then stops running.
	0008	Drum Bk motor fails to run.
	0009	Drum Bk motor runs but then stops running.
E014	0000	Fixing motor fails to run.
	0001	Fixing motor runs but then stops running.
E015	0000	Failure in developing disengagement
E020	0000	Error in density sensor
E024	0000	Y toner level sensor failure
	0001	M toner level sensor failure
	0002	C toner level sensor failure
	0003	Bk toner level sensor failure
E066	0000	Error in environment sensor
E078	0000	Error in primary transfer estrangement unit
E100	0000	Y scanner assembly fault
	0001	M scanner assembly fault
	0002	C scanner assembly fault
	0003	Bk scanner assembly fault
	0004	Primary pseudo BD fault
	0005	Secondary pseudo BD fault
E194	0000	Error in CPR sensor
E196	0001	Error in DCON ROM
E197	0000	Engine Communication Error
E198	0000	DC controller memory malfunction
E202	0000	Reader HP sensor fault
E225	0000	Error in light intensity of the lamp
E248	0000	EEPROM access error
E351	0000	Main controller PCB fault
E719	0000	Erroneous communication with card reader (serial communication)
	0002	Erroneous communication with coin vendor (serial communication)
E744	0001	Language file version error
	0002	Language file size error
	0003	Language file version error
	0004	Language file read error
E804	0000	Error in main unit fan
E805	0005	Error in duplex fan
E840	0000	Error in pressure release mechanism

14.2 Error Code Details

14.2.1 Error Code Details

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-14-2

Code	Description	Action
E000	Error in start-up of fixing assembly	
0000	<p>Description When 1 sec passed after energization of the heater, the detected temperature of the main thermistor is not 5 deg C or more (0 deg C at power on).</p> <p>Cause Disconnection of main thermistor, disconnection of fixing heater, error in DC controller PCB.</p>	<ul style="list-style-type: none"> - Check of the connector of the low-voltage power supply PCB - Replacement of fixing sleeve unit - Replacement of DC controller PCB
E001	Error in overheating of fixing assembly	
0000	<p>Description The status where the detected temperature of the main thermistor is 225 deg C (approx. 0.84V equivalent) or more is detected for 0.5 continuous sec or more.</p> <p>Cause Error in main thermistor, error in DC controller PCB.</p>	<ul style="list-style-type: none"> - Check of the connector of the low-voltage power supply PCB - Replacement of fixing sleeve unit - Replacement of DC controller PCB
0001	<p>Description The status where the detected temperature of the sub thermistor is 245 deg C (approx. 2.12V equivalent) or more is detected for 0.5 continuous sec or more.</p> <p>Cause Error in sub thermistor, error in DC controller PCB.</p>	
E003	Error in abnormally low temperature of fixing assembly	
0000	<p>Description The status where the detected temperature of the main thermistor is 100 deg C (approx. 2.60V equivalent) or less is detected for 0.5 continuous sec or more.</p> <p>Cause Error in low-voltage power supply PCB, disconnection of main thermistor, error in DC controller PCB.</p>	<ul style="list-style-type: none"> - Replacement of low-voltage power supply PCB - Replacement of fixing sleeve unit - Replacement of DC controller PCB
0001	<p>Description The status where the detected temperature of the sub thermistor is less than 100 deg C (approx. 0.38V equivalent) is detected 0.5 continuous sec or more after energization of the heater.</p> <p>Cause Error in sub thermistor, error in DC controller PCB.</p>	<ul style="list-style-type: none"> - Check of the connector of the low-voltage power supply PCB - Replacement of fixing sleeve unit - Replacement of DC controller PCB
E004	Error in fixing power supply drive circuit	
0000	<p>Description Cannot detect the zero cross signal for the specified period or more.</p> <p>Cause Error in fixing control circuit block.</p>	<ul style="list-style-type: none"> - Replacement of low-voltage power supply PCB

Code	Description	Action
E012	Error in activation of motor	
0000	<p>Description When 3.5 sec passed after activation of ETB motor, the cycle of ETB motor speed detection signal does not become its specified value.</p> <p>Cause Error in ETB motor, error in DC controller PCB.</p>	- Replacement of ETB motor - Replacement of DC controller PCB
0001	<p>Description After ETB motor speed detection signal became the specified value of the cycle, it exceeds the specified cycle for 2 continuous sec or more.</p> <p>Cause Error in ETB motor, error in DC controller PCB.</p>	
0002	<p>Description When 2.5 sec passed after activation of the yellow drum motor, the cycle of drum motor speed detection signal does not become its specified value.</p> <p>Cause Error in drum motor, error in DC controller PCB.</p>	- Replacement of drum motor - Replacement of DC controller PCB
0003	<p>Description After the yellow drum motor speed detection signal became the specified value of the cycle, it exceeds the specified cycle for 2 continuous sec or more.</p> <p>Cause Error in drum motor, error in DC controller PCB.</p>	
0004	<p>Description When 2.5 sec passed after activation of the magenta drum motor, the cycle of drum motor speed detection signal does not become its specified value.</p> <p>Cause Error in drum motor, error in DC controller PCB.</p>	
0005	<p>Description After the magenta drum motor speed detection signal became the specified value of the cycle, it exceeds the specified cycle for 2 continuous sec or more.</p> <p>Cause Error in drum motor, error in DC controller PCB.</p>	
0006	<p>Description When 2.5 sec passed after activation of the cyan drum motor, the cycle of the drum motor speed detection signal does not become its specified value.</p> <p>Cause Error in drum motor, error in DC controller PCB.</p>	
0007	<p>Description After the cyan drum motor speed detection signal became the specified value of the cycle, it exceeds the specified cycle for 2 continuous sec or more.</p> <p>Cause Error in drum motor, error in DC controller PCB.</p>	
0008	<p>Description When 2.5 sec passed after activation of the black drum motor, the cycle of the drum motor speed detection signal does not become its specified value.</p> <p>Cause Error in drum motor, error in DC controller PCB.</p>	
0009	<p>Description After the black drum motor speed detection signal became the specified value of the cycle, it exceeds the specified cycle for 2 continuous sec or more.</p> <p>Cause Error in drum motor, error in DC controller PCB.</p>	
E014	Error in activation of fixing motor	
0000	<p>Description When 2.5 sec passed after activation of fixing motor, the cycle of the fixing motor speed detection signal does not become its specified value.</p> <p>Cause Error in fixing motor, error in DC controller PCB.</p>	- Replacement of fixing motor - Replacement of DC controller PCB
0001	<p>Description After the fixing motor speed detection signal became the specified value of the cycle, it exceeds the specified cycle for 2 continuous sec or more.</p> <p>Cause Error in fixing motor, error in DC controller PCB.</p>	
E015	Failure in developing disengagement	
0000	<p>Description Developing cylinder disengagement mechanism does not function correctly.</p> <p>Cause Developing disengagement mechanism fault, developing disengagement solenoid fault, developing disengagement sensor fault, DC controller PCB fault.</p>	Check the developing disengagement mechanism. Replace developing disengagement solenoid. Replace developing disengagement sensor. Replace DC controller PCB.

Code	Description	Action
E020	Error in density sensor	
0000	<p>Description Cannot receive enough light when detecting image density.</p> <p>Cause Dirt on density sensor, error in density sensor, error in DC controller PCB, error in toner cartridge.</p>	<ul style="list-style-type: none">- Replacement of ETB unit- Error in high-voltage joint (Check high-voltage joint for each color, and each joint to high-voltage PCB)- Replacement of DC controller- Replacement of toner cartridge

Code	Description	Action
E024	Toner level sensor failure	
0000	<p>Description Failure output from the toner level sensor (Yellow).</p> <p>Cause Memory controller PCB assembly fault, DC controller PCB assembly fault, toner cartridge fault.</p>	<ul style="list-style-type: none"> - Replace toner cartridge - Replace memory controller PCB - Replace DC controller PCB
0001	<p>Description Failure output from the toner level sensor (Magenta).</p> <p>Cause Memory controller PCB assembly fault, DC controller PCB assembly fault, toner cartridge fault.</p>	
0002	<p>Description Failure output from the toner level sensor (Cyan).</p> <p>Cause Memory controller PCB assembly fault, DC controller PCB assembly fault, toner cartridge fault.</p>	
0003	<p>Description Failure output from the toner level sensor (Black).</p> <p>Cause Memory controller PCB assembly fault, DC controller PCB assembly fault, toner cartridge fault.</p>	
E066	Error in environment sensor	
0000	<p>Description Failure in environment sensor.</p> <p>Cause Environment sensor fault, DC controller PCB assembly fault.</p>	<ul style="list-style-type: none"> - Replace environment sensor - Replace DC controller PCB
E078	Error in primary transfer estrangement unit	
0000	<p>Description Primary transfer estrangement unit does not function properly.</p> <p>Cause Terminal assembly fault, transfer roller estrangement solenoid fault, EBT unit fault, high-voltage power PCB assembly fault.</p>	<ul style="list-style-type: none"> - Replace ETB estrangement solenoid - Replace ETB unit - Terminal assembly fault (check on every contact between the terminals of each color and the high voltage PCB assembly)
E100	Error in scanner motor, laser unit, BD	
0000	<p>Description Yellow scanner assembly malfunction.</p> <p>Cause Laser scanner unit fault, DC controller PCB assembly fault.</p>	<ul style="list-style-type: none"> - Replace laser scanner unit - Replace DC controller PCB
0001	<p>Description Magenta scanner assembly malfunction.</p> <p>Cause Laser scanner unit fault, DC controller PCB assembly fault.</p>	
0002	<p>Description Cyan scanner assembly malfunction.</p> <p>Cause Laser scanner unit fault, DC controller PCB assembly fault.</p>	
0003	<p>Description Black scanner assembly malfunction.</p> <p>Cause Laser scanner unit fault, DC controller PCB assembly fault.</p>	
0004	<p>Description Failure output of a magenta BD signal</p> <p>Cause laser scanner unit fault, DC controller PCB fault.</p>	
0005	<p>Description Failure output of a magenta BD signal</p> <p>Cause laser scanner unit fault, DC controller PCB fault.</p>	
E194	Error in CPR sensor	
0000	<p>Description Cannot detect color displacement detection pattern, detected results fall outside the acceptable range.</p> <p>Cause Dirty color displacement detection sensor, color displacement detection sensor fault, DC controller PCB assembly fault, toner cartridge fault.</p>	<ul style="list-style-type: none"> - Replace ETB unit - Terminal assembly fault (check on every contact between the terminals of each color and the high voltage PCB assembly) - Replace DC controller PCB - Replace toner cartridge
E196	Error in DCON ROM	
0001	Updating the ROM on the DC controller PCB assembly has been failed.	<ul style="list-style-type: none"> - Replace DC controller PCB
E197	Engine communication error	

Code	Description	Action
0000	Internal communication error	- Replace DC controller PCB - Replace video controller PCB
E198	DC controller memory malfunction	
0000	Description DC controller memory malfunction. Cause DC controller PCB assembly fault.	- Replace DC controller PCB assembly

Code	Description	Action
E202	Reader HP sensor fault	
0001	Reader HP outward fault The CCD unit moves backward, but does not move to the home position.	- Replace reader HP sensor. - Replace reader motor sensor. - Replace reader unit.
0002	Reader HP homeward fault The CCD unit moves forward, but does not move to the home position.	
E225	Error in light intensity of the lamp	
0000	Decrease of light intensity of the lamp.	Replace reader unit.
E248	EEPROM access error	
0001	Error at EEPROM power-on EEPROM data cannot be read at power-on.	Replace reader unit.
0002	Error in EEPROM writing EEPROM writing cannot be performed.	
0003	Error in EEPROM reading after writing EEPROM reading cannot be performed after writing is performed.	
0004	Error in EEPROM register writing EEPROM register writing cannot be performed.	
E351	Main controller PCB fault	
0000	Description Internal error of the main controller PCB Cause Main controller PCB fault.	- Check the connection of main controller PCB. - Replace main controller PCB.
E719	Communication error of options	
0000	Erroneous communication with card reader (serial communication) - Disconnection from the card reader has been detected since communication started after confirmation of normal connection to the card reader (after power-on). - A serial communication error has occurred. (The serial communication error cannot be recovered.)	- Check the connectors of the card reader and image processor PCB. - Replace the card reader for normal connection. - Replace the image processor PCB.
0002	Erroneous communication with coin vendor (serial communication) - Disconnection from the coin vendor has been detected since communication started after confirmation of normal connection to the coin vendor (after power-on). - A serial communication error has occurred. (The serial communication error cannot be recovered.)	- Check the connection between the image processor PCB and serial PCB. - Check the connectors of the serial PCB and coin vendor for normal connection. - Replace the serial PCB. - Check the coin vendor. - Replace the image processor PCB.
E744	Language file/boot ROM/USB memory error	
0001	Language file version error The language file version does not match Bootable.	Download a language file of the correct version.
0002	Language file size error The language file is longer than the permitted size.	Download a language file of the correct version.
0003	Language file version error The language file version does not match Bootable.	Download a language file of the correct version.
0004	Language file read error Reading of language file is invalid.	Download a language file of the correct version.
E804	Error in power supply fan	
0000	Description The fan lock detection signal is input for about 10 sec or longer continuously. Cause Power supply fault, DC controller PCB fault.	- Replace the power supply fan - Replace the DC controller PCB
E805	Error in duplexing fan/CPU fan	
0005	Description The duplexing fan lock detection signal is input for about 10 sec or longer continuously. Cause Duplexing fan fault, DC controller PCB fault.	- Replace the duplexing fan - Replace the DC controller PCB
E840	Error in pressure release mechanism	
0000	Description Although passing 2.5 sec from the start of HP control, HP (pressure condition) cannot be controlled. Cause Fixing drive assembly fault, fixing pressure release cam fault.	- Replace the fixing drive assembly - Replace the fixing pressure release cam

14.3 Jam Code

14.3.1 Jam Code (main body)

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-14-6

Code	Name	Sensor No.	Description
0104	Delay jam in paper pickup section	SR710	The registration sensor cannot detect the leading edge of paper from the moment paper pickup starts to the moment the jam detection time is reached.
0208	Stationary jam in paper pickup section	SR710	The registration sensor cannot detect the no paper status specified time before the leading edge of the picked up paper reaches this sensor.
010c	Delay jam in deliver section	SR710, SR6005	- The fixing delivery sensor cannot detect presence of paper within the specified time after turning on of the registration clutch. - The fixing delivery sensor detected absence of paper within the specified time after the sensor had detected presence of paper within the specified time after turning on of the registration clutch. - The No.1 delivery sensor cannot detect presence of paper within the specified time after turning on of the fixing delivery sensor.
0210	Stationary jam in delivery section	SR710, SR6005	- The fixing delivery sensor cannot detect absence of paper within the specified time after turning off of the registration clutch. - The fixing delivery sensor cannot detect absence of paper within the specified time after the sensor detected the leading edge of paper. - The No.1 delivery sensor cannot detect absence of paper within the specified time after the sensor detected the leading edge of paper.
0214	Stationary jam in machine	SR706, SR710, SR6001, SR6005	Paper was detected in the paper transport path during initial rotation, during automatic delivery, at the end of cleaning, or at reception of an emergency stop command.
1118	Door open jam	SR720	The door was opened when there was printing paper in the transport path.
0221	Reverse section JAM	SR706, SR715	This jam is applied when the double-fed paper drops on the back of the host machine. The machine determines the reverse section jam if the paper length that is detected by the reverse sensor (SR706) is 50mm or more longer than the paper length that is detected by the delivery sensor (SR715).
0228	Reverse re-pickup section jam	SR710	The machine determines the reverse re-pickup jam if the registration sensor (SR710) cannot detect the presence of paper within the specified time (t) after the duplexing pickup starts. Specified time (t) differs depending on the feeding speed. 1/1 speed: approx. 2.0 sec 4/5 speed: approx. 2.5 sec 1/2 speed: approx. 4.0 sec

14.3.2 Jam Code (ADF)

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-14-7

Code	Name	Sensor No.	Description
0001	ADF paper trailing edge sensor (SR719) not reaching (delay jam)	SR719	The leading edge of paper does not reach the ADF paper trailing edge sensor (SR719) within 1.8 sec after the trailing edge of precedent page passes through the ADF paper trailing edge sensor (SR719) in 1-sided multiple jobs. The leading edge of paper does not reach the ADF paper trailing edge sensor (SR719) within 1.2 sec after reverse operation starts in 2-sided job.
0002	ADF paper trailing edge sensor (SR719) stray (stray jam)	SR719	The trailing edge of paper does not passes through the ADF paper trailing edge sensor (SR719) within 3.4 sec after the leading edge of paper reaches the ADF paper trailing edge sensor (SR719) in 1-sided job. The trailing edge of paper does not passes through the ADF paper trailing edge sensor (SR719) within 3.5 sec after the leading edge of paper reaches the ADF paper trailing edge sensor (SR719) in 2-sided job.
0094	Initial stationary (in-body residual jam)	SR719	The ADF paper trailing edge sensor (SR719) detects paper at power-ON.
0095	Pickup NG	SR718	The paper is removed from the ADF original tray within 0.1 sec after the start key is pressed.

14.4 Alarm Code

14.4.1 Alarm Code (ADF)

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-14-8

Code	Name	Sensor No.	Description
0003H	Separation NG alarm	SR719	The leading edge of paper does not reach the ADF paper trailing edge sensor (SR719) within 3.2 sec after the ADF pickup motor starts positive rotation.

14.5 Fax Error Codes

14.5.1 Outline

14.5.1.1 Error Code Outline

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

An error code is used to indicate a fault in a machine, and is indicated in the machine's LCD or reports, showing the nature (symptoms) of the fault. Using the error code, the user or the service man can readily find out how to correct the fault by simply referring to the User's Manual or service manual.

An error code may be either of the following two types:

- **User Error Codes**

A fault indicated as a user error code is one that can easily be corrected by the user, as by operating the machine. It takes the form of "#+number."

- **Service Error Codes**

If a fault calls for a service man for correction, it is indicated as a service man error code in the form of "##+number" or "SYSTEM ERROR E+number."

MEMO:

- A service error code expressed in the form of "##+number" will not appear on the LCD, Error Tx Report, or Activity Report while the machine remains in factory default state. To check a service error code, shift bit 0 of service soft switch #1 SSSW SW01 to '1'.
- Display only the error codes which are newly incorporated in this machine as well as which require remedies unique to the product. For the causes and countermeasures of other error codes, refer to the separate G3/G4 Facsimile Error Code List (Rev. 2).

14.5.2 User Error Code

14.5.2.1 User Error Code

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-14-9

No.	Tx/Rx	Description
#0001	[Tx]	an original has jammed.
#0003	[Tx]	time-out for copying or sending/receiving a single page has occurred.
#0005	[Tx]	time-out for initial identification (T0/T1) has occurred.
#0012	[Rx]	recording paper is absent at the other party.
#0018	[Tx]	auto call initiation has failed.
#0037	[Rx]	image memory overflow at time of reception has occurred.

14.5.3 Service Error Code

14.5.3.1 Service Error Code

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-14-10

No.	Tx/Rx	Description
##0100	[Tx]	at time of transmission, the procedural signal has been transmitted more than specified.
##0101	[Tx]	the modem speed does not match that of the other party.
##0102	[Tx]	at time of transmission, fall-back cannot be used.
##0104	[Tx]	at time of transmission, RTN or PIN is received.
##0106	[Rx]	at time of reception, the procedural signal is received for 6 sec while in wait for the signal.
##0107	[Rx]	at time of reception, the transmitting party cannot use fall-back.
##0109	[Tx]	at time of transmission, a signal other than DIS, DTC, FTT, CFR, or CRP is received, and the procedural signal has been sent more than specified.
##0114	[Rx]	at time of reception, RTN is transmitted.
##0200	[Rx]	at time of reception, no image carrier is detected for 5 sec.
##0201	[Tx]	DCN is received outside the normal parity procedure.
##0224	[Tx]	Error has occurred on transmission procedural signal.
##0228	[Rx]	Error has occurred on images' information control.
##0232	[Tx]	encoding error has occurred.

No.	Tx/Rx	Description
##0237	[Rx]	decoding error has occurred.
##0261	[Tx]	system error has occurred.
##0282	[Tx]	at time of transmission, the procedural signal has been transmitted more than specified.
##0283	[Tx]	at time of transmission, the procedural signal has been transmitted more than specified.
##0288	[Tx]	after transmission of EOP, a signal other than PIN, PIP, MCF, RTP, or RTN has been received.
##0289	[Tx]	after transmission of EOM, a signal other than PIN, PIP, MCF, RTP, or RTN has been received.
##0290	[Tx]	after transmission of MPS, a signal other than PIN, PIP, MCF, RTP, or RTN has been received.
##0670	[Tx]	at time of V.8 late start, the V.8 ability of DIS front the receiving party is expected to be detected, and the CI signal is expected to be transmitted in response; however, the procedure fails to advance, and the line is released because of T1 time-out.
##0671	[Rx]	at time of V.8 arrival, procedure fails to move to phase 2 after detection of CM signal from caller, causing T1 time-out and releasing line
##0672	[Tx]	at time of V.34 transmission, a shift in procedure from phase 2 to phase 3 and thereafter stops, causing the machine to release the line and suffer T1 timeout.
##0673	[Rx]	at time of V.34 reception, a shift in procedure from phase 2 to phase 3 and thereafter stops, causing the machine to release the line and suffer T1 timeout.
##0674	[Tx]	at time of V.34 transmission, a shift in procedure from phase 3 and phase 4 to the control channel and thereafter stops, causing the machine to release the line and suffer T1 timeout.
##0675	[Rx]	at time of V.34 reception, a shift in procedure from phase 3 and phase 4 to the control channel and thereafter stops, causing the machine to release the line and suffer T1 timeout.
##0752	[Tx]	at time of ECM transmission, DCN is received after transmission of PPS-NUL.
##0753	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of PPS-NUL, or T5 time-out (60 sec) has occurred.
##0754	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of PPS-NUL.
##0757	[Tx]	at time of ECM transmission, DCN is received after retransmission of PPS-MPS.
##0758	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of PPS-MPS, or T5 time-out (60 sec) has occurred.
##0759	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of PPS-MPS.
##0762	[Tx]	at time of ECM transmission, DCN is received after transmission of PPS-EOM.
##0763	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of PPS-MPS, or T5 time-out (60 sec) has occurred.
##0764	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of PPS-EOM.
##0767	[Tx]	at time of ECM transmission, DCN is received after transmission of PPS-EOP.
##0768	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of PPS-EOP, or T5 time-out (60 sec) has occurred.
##0769	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of PPS-EOP.
##0772	[Tx]	at time of ECM transmission, DCN is received after transmission of EOR-NUL.
##0773	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of EOR-NUL, or T5 time-out (60 sec) has occurred.
##0774	[Tx]	at time of ECM transmission, ERR is received after transmission of EOR-NUL.
##0778	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission EOR-MPS, or T5 time-out (60 sec) has occurred.
##0779	[Tx]	at time of ECM transmission, ERR is received after transmission of EOR-MPS.
##0782	[Tx]	at time of ECM transmission, DCN is received after transmission of EOR-EOM.
##0783	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of EOR-EOM, or T5 time-out (60 sec) has occurred.
##0784	[Tx]	at time of ECM transmission, ERR is received after transmission of EOR-EOM.
##0787	[Tx]	at time of ECM transmission, DCN is received after transmission of EOR-EOP.
##0788	[Tx]	at time of ECM transmission, the procedural signal has been transmitted more than specified after transmission of EOR-EOP, or T5 time-out (60 sec) has occurred.
##0789	[Tx]	at time of ECM transmission, ERR is received after transmission of EOR-EOP.
##0790	[Rx]	at time of ECM reception, ERR is transmitted after transmission of EOR-Q.
##0791	[Tx]	while ECM mode procedure is under way, a signal other than a meaningful signal is received.
##0792	[Rx]	at time of ECM reception, PPS-NUL cannot be detected over partial page processing.
##0793	[Rx]	at time of ECM reception, no effective frame is received while high-speed signal reception is under way, thus causing time-out.
##0794	[Tx]	at time of ECM reception, PPR with all 0s is received.
##0795	[Tx]	a fault has occurred in code processing for communication.

Chapter 15 Special Management Mode

15.2.3 Paper Error	15-3
15.2.4 Image error	15-3

15.1 Overview

15.1.1 Preface

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Special management mode is the mode for users to solve a problem by themselves when an error occurs.
However, information about this mode is not disclosed to users.

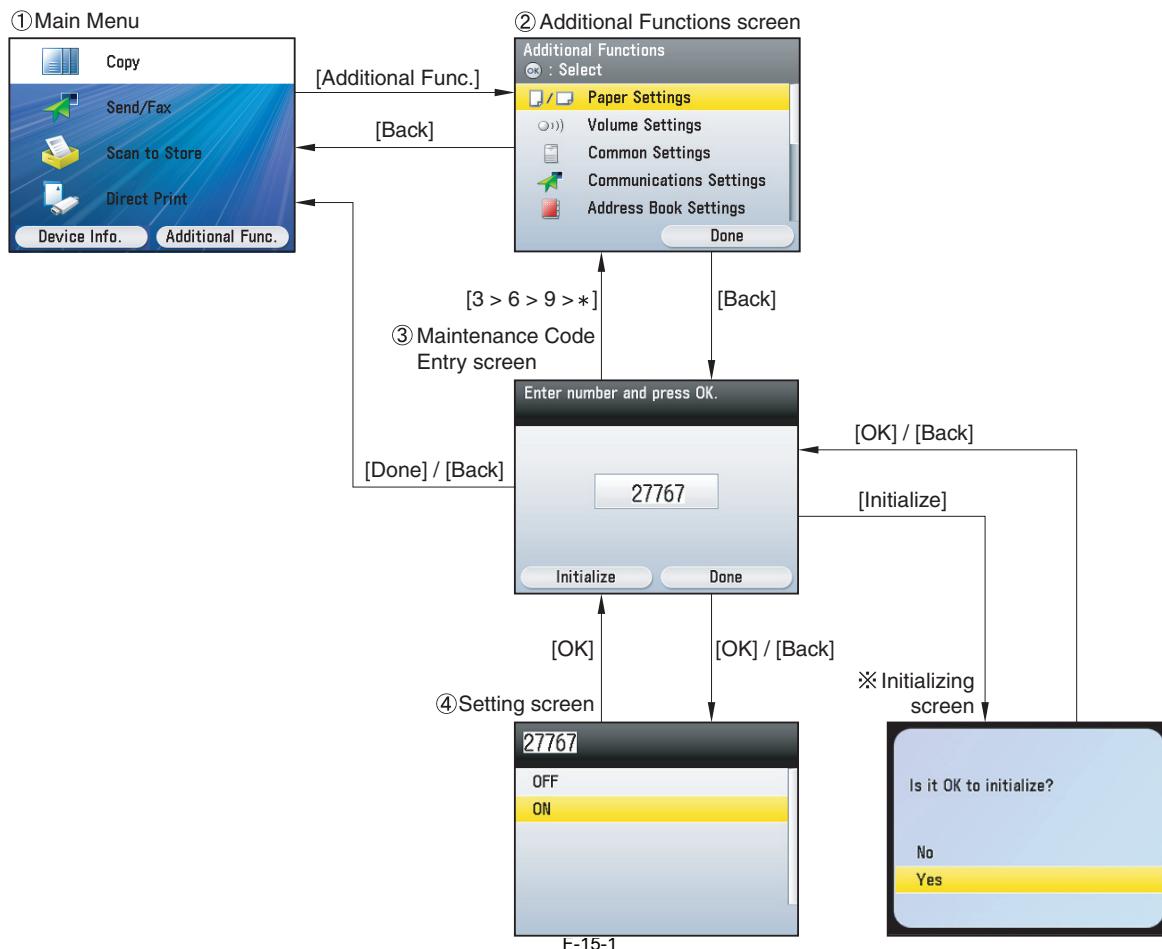

Operators at call center ask users the occurrence situation and if they decide that users can solve this problem, they tell users to use a measure with this mode to solve the problem by themselves.

If an issue cannot be solved with this mode, restore the setting to original.

15.1.2 Entering the Special Management Mode

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Turn ON the power of the host machine.
- 2) Press: Main Menu Key > Additional Func. key (Right Any key).
Additional function screen is displayed.
- 3) Press: 3 > 6 > 9 > *.
Mode transfers to the special management mode and maintenance code entry screen is displayed.
- 4) Enter the maintenance code (5 digit) and press OK.
Setting screen is displayed.
- 5) Switch from OFF to ON and press OK.
Pressing OK activates the setting.

If you restore the settings, switch from ON to OFF in the same procedure.

If you restore the initial settings, press Initialize key (left Any key) on the maintenance code entry screen.

- If the problem is not fixed after changing the setting, make sure to reset the setting.
- This machine receives jobs while changing the setting. In order not to receive jobs, disconnect the network cable before operation.

15.1.3 Menu List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-15-1

Maintenance code	Special management function	Applicable mode	Setting value (*default)	Control details
27767	High-resisting paper mode	All modes	OFF * ON	Lower the final output value of transfer bias by 250V. (Only if the high-humidity transparency mode or high-humidity glossy film mode is not specified.)
27267	4mil transparency mode	Transparency	OFF * ON	Lower the final output value of transfer bias by 500V. (Only if the high-humidity transparency mode, high-humidity glossy paper mode or high-resisting paper mode is not specified.)
23866	Calcareous paper mode	All modes	OFF * ON	Apply the maximum attraction bias regardless of environment. Since there is no attraction paper resistor result, set the transfer bias in accordance with the environment.
25407	Thin/rough paper mode	Thin paper	OFF * ON	Change the process speed by 4/5 speed. Use the temperature control table for thin/rough paper (for thin paper only). Process speed is not changed but the temperature control table is changed (for plain or thick paper 2 only).
47267	High-humidity transparency mode	Transparency	OFF * ON	Lower the final output value of transfer bias by 100V (for transparency only).
47667	Re-transfer prevention mode	All modes	OFF * ON	Lower the transfer bias of yellow and black according to the environment. (Only if the high-humidity transparency mode, high-humidity glossy film mode, high-resisting paper mode or 4mil transparency mode is not specified.)
34691	Color displacement correction mode	Color mode	OFF * ON	Pre-rotation is extended by 10 sec and also paper interval is extended by one and half-round when printing.
14682	Foggy image prevention mode	All modes	OFF * ON	Pre-exposure is turned OFF. Transfer bias is not applied as a countermeasure against the trailing edge toner splash.
25200	Transparency permeability correction mode	Transparency	OFF * ON	Specify the control temperature at 180 deg C and make an idle rotation of the fixing assembly for 45 sec at initial rotation.
53649	Monochrome mode engage mode	Monochrome mode	OFF * ON	Print in ETB full-engaged mode.
35607	Hot offset prevention mode	All modes	OFF * ON	Lower the control temperature by 10 deg C without exception.
65676	Leading edge margin switch (enlarge)	All modes	OFF * ON	Enlarge the leading edge margin by 2 mm. When the leading edge margin is already set to small beforehand, the margin will be standard.
65677	Leading edge margin switch (reduce)	All modes	OFF * ON	Reduce the leading edge margin by 2 mm. When the leading edge margin is already set to large beforehand, the margin will be standard.
68676	Image position correction mode (toward right)	All modes	OFF * ON	Use this when the image is displaced to the left. When this is specified, image is moved to the right by 2 mm. When the image position correction mode (toward left) is already set, margin will be standard.
68677	Image position correction mode (toward left)	All modes	OFF * ON	Use this when the image is displaced to the right. When this is specified, image is moved to the left by 2 mm. When the image position correction mode (toward right) is already set, margin will be standard.
25607	Printing mode setting switch	For overseas models (plain paper mode)	OFF * ON	To prevent hot offset at outside Japan, change the printing mode of [plain paper] from [Normal mode] to [Light mode].

15.2 Troubleshooting

15.2.1 Pre-Check

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Firstly, check that the paper is used within the specifications (type, weight, size, direction, pickup position). If it is not within the specifications, tell users the correct usage.

15.2.2 User Request

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-15-2

1	I need faster output in color/monochrome mixed mode.	Measure	Execute [Monochrome mode engage mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 53649 <Service mode> COPIER > FUNCTION > SPLMAN > SPL53649
		Note	When setting [Monochrome mode engage mode], it affects the life of color toner cartridges even though printing in monochrome.

15.2.3 Paper Error

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

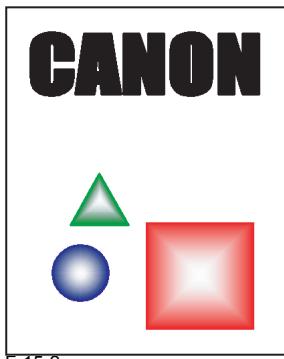

T-15-3

1	Corner bend, dirt and paper stack in monochrome	Supplement	In [Pickup] page, if setting [Paper Type] to [Plain Paper] and printing monochrome, the corner of paper may bent, dirt may appear or paper may be stack depending on the paper type.
		Measure	Execute [Monochrome mode engage mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 53649 <Service mode> COPIER > FUNCTION > SPLMAN > SPL53649
		Note	When setting [Monochrome mode engage mode], it affects the life of color toner cartridges even though printing in monochrome.

15.2.4 Image error

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

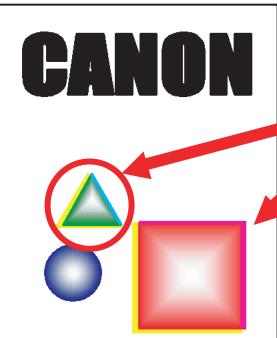

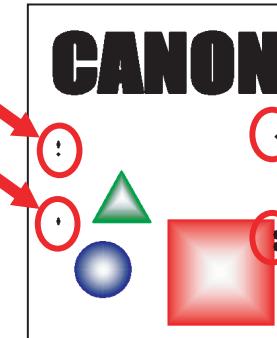

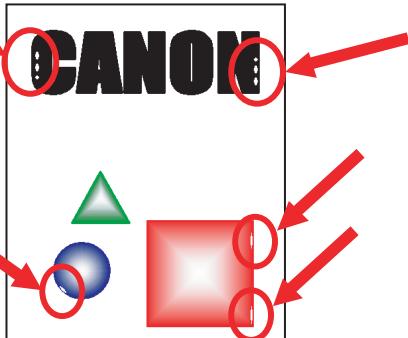

Flawless image

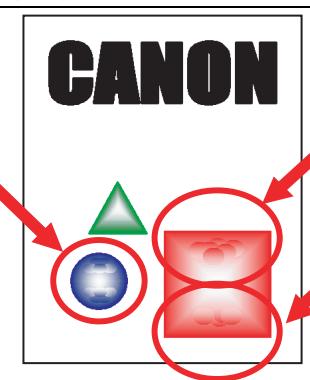

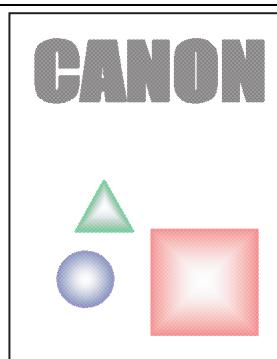

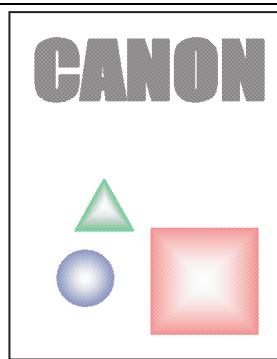

F-15-2

The following samples show the expected errors in A4 or letter size medias.

T-15-4

1	Image ghost on the non-image area		Measure	Execute [Hot offset prevention mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 35607 <Service mode> COPIER > FUNCTION > SPLMAN > SPL35607
2	Color displacement		Supplement	When printing the thick paper continuously, color displacement may occur.
			Measure	Execute [Color displacement correction mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 34691 <Service mode> COPIER > FUNCTION > SPLMAN > SPL34691
			Note	When [Color displacement correction mode] is set, printing speed may be slowing.
3	Speckles on image and non-image area		Supplement	When printing continuously, red color image may have blur or lines depending on the paper type.
			Measure	Execute [Calcareous paper mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 23866 <Service mode> COPIER > FUNCTION > SPLMAN > SPL23866
			Note	When [Calcareous paper mode] is set, paper jam may occur depending on the environment (especially, low-humidity environment).
4	Toner is not fully fixed and printing is blur.		Measure	Execute [Thin rough paper mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 25407 <Service mode> COPIER > FUNCTION > SPLMAN > SPL25407
			Note	None

5	Fine lines in feeding direction		Supplement	When printing images, vertical thin lines may appear on the image.
			Measure	Execute [Foggy image prevention mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 14682 <Service mode> COPIER > FUNCTION > SPLMAN > SPL14682
			Note	None
6	Mottled image on gradation area (not smooth)		Supplement	Depending on the paper type (especially thin paper) or environment (especially low-humidity environment), sparking mark may appear around characters or patterns.
			Measure	Execute [High resisting paper mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 27767 <Service mode> COPIER > FUNCTION > SPLMAN > SPL27767
			Note	When [High resisting paper mode] is set, printing quality may be deteriorated depending on the paper type (especially thick paper) or environment (high-humidity environment).
7	Mottled image on entire image area (not smooth)		Supplement	When printing the blue color image, mottled or scale-like image failure appears.
			Measure	Execute [Re-transfer prevention mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 47667 <Service mode> COPIER > FUNCTION > SPLMAN > SPL47667
			Note	When [Re-transfer prevention mode] is set, symptom may get worse depending on the printer status.
8	Mottled image on entire image area in transparency (not smooth)		Supplement	Depending on the environment (especially low-humidity environment), when printing on thin transparency film, uneven image failure may appear on the image.
			Measure	Execute [4mil transparency mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 27267 <Service mode> COPIER > FUNCTION > SPLMAN > SPL27267
			Note	None
9	Mottled image at the center image area of the transparency (not smooth)		Measure	Execute [High temperature transparency mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 47267 <Service mode> COPIER > FUNCTION > SPLMAN > SPL47267
			Note	None

10	When projecting the transparency, image looks dark.		
	Supplement	When using the transparency printed with this machine with a projector, image may look dark.	
	Measure	Execute [Transparency permeability correction mode]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 25200 <Service mode> COPIER > FUNCTION > SPLMAN > SPL25200	
11	Image position differs from the setting.		
	Measure	When enlarging the leading edge margin, execute [leading edge margin switch (enlarge)]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 65676 <Service mode> COPIER > FUNCTION > SPLMAN > SPL65676	
		When reducing the leading edge margin, execute [leading edge margin switch (reduce)]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 65677 <Service mode> COPIER > FUNCTION > SPLMAN > SPL65677	
		When enlarging the left/right margin, execute [left/right margin switch (enlarge)]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 68676 <Service mode> COPIER > FUNCTION > SPLMAN > SPL68676	
		When reducing the left/right margin, execute [left/right margin switch (reduce)]. <Special management mode> Main menu > Additional function > 3 > 6 > 9 > * > 68677 <Service mode> COPIER > FUNCTION > SPLMAN > SPL68677	
	Note	None

16.1 Outline

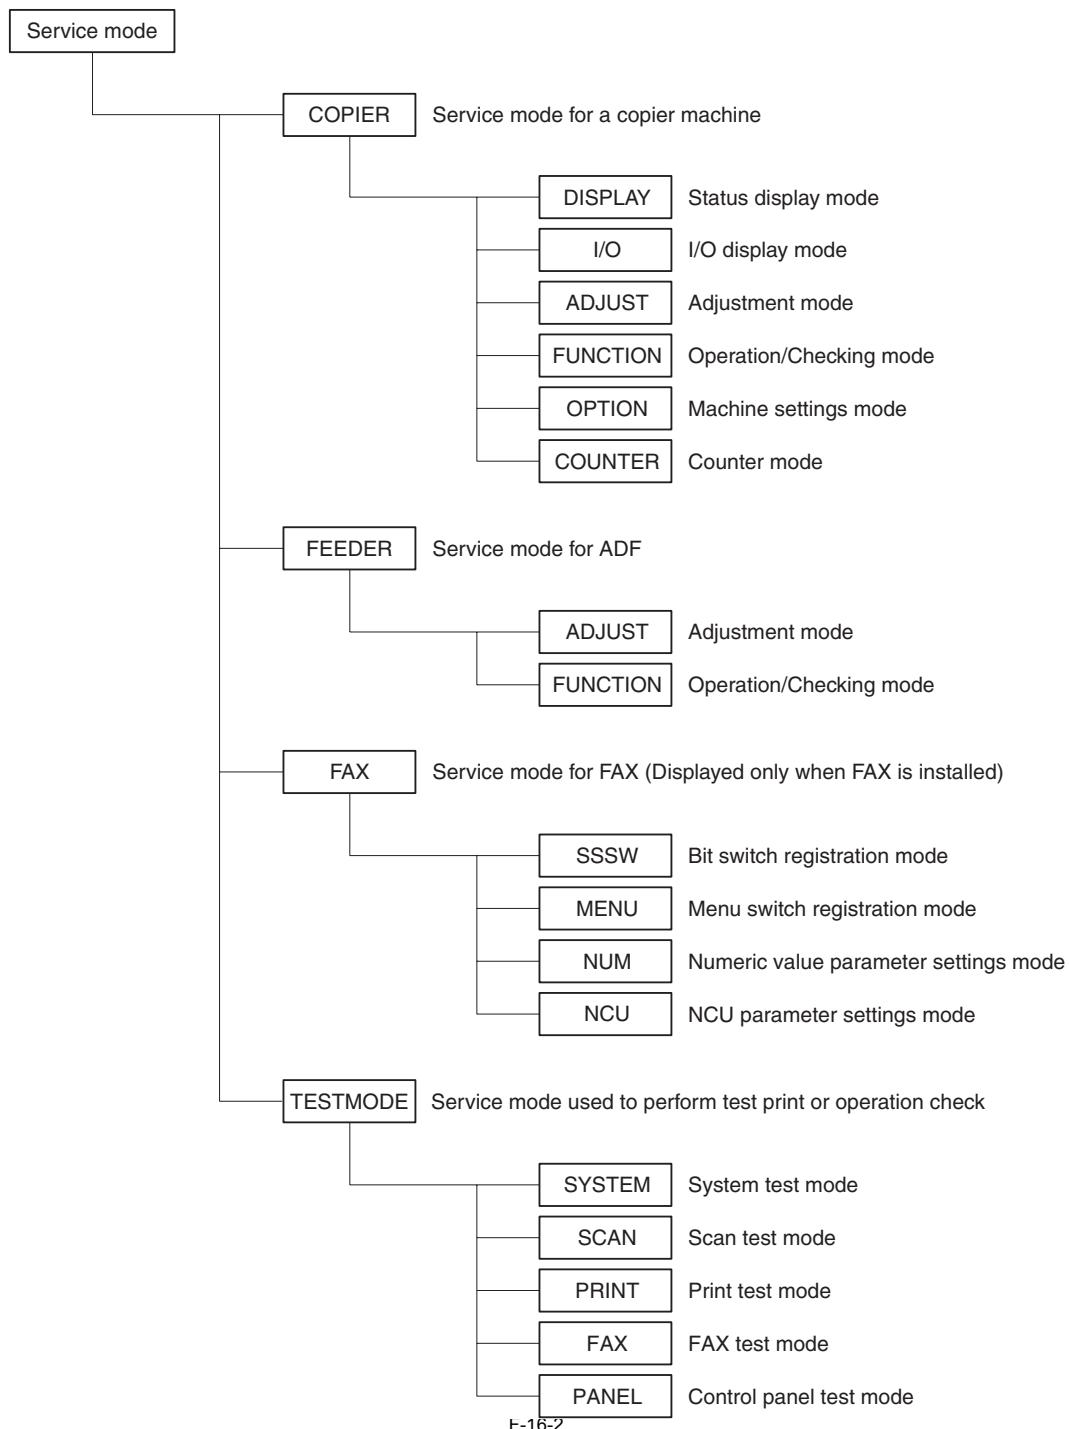

16.1.1 Service Mode Configuration

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The service mode screen transition is shown below.

The machine's service mode is categorized into the following modes.

16.1.2 Entering>Selecting Service Mode

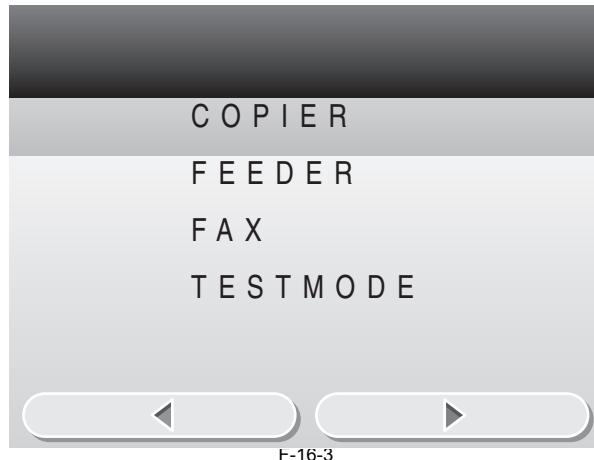

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

When making a copier machine execute an operation using the service mode, be sure to remove the cable from the external controller or the network cable before entering the service mode. Especially, when a print job is entered from an outside machine during the execution of FUNCTION mode (operation/checking mode), a malfunction may occur and cause damage to the copier machine.

- 1) Press the main menu key on the control panel unit.
- 2) Press the "2" key.
- 3) Press the "8" key.
- 4) Press the main menu key on the control panel unit.

After the above-mentioned procedure is executed, the initial screen (shown in the figure below) is displayed.

16.1.3 Exiting Service Mode

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Every time the Return key is pressed in a screen other than the initial screen, the screen goes back to the previous one.
When the Return key is pressed in the initial screen, the screen goes back to the main menu screen.

When using the service mode (ADJUST, FUNCTION, OPTION), be sure to turn the main power switch OFF/ON after exiting the service mode.

16.1.4 Service Mode Backup

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Since there is no service label in the machine, printing in the service mode setting value is not available either.
Hence, adjustment in the market is being performed. Please note that when the value service mode is modified, be sure to record the modified value.

MEMO:

When PCB is replaced or RAM clearing is performed, the adjusted ADJUST and OPTION value will return to default value.

16.1.5 Service Mode Screen Operation

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

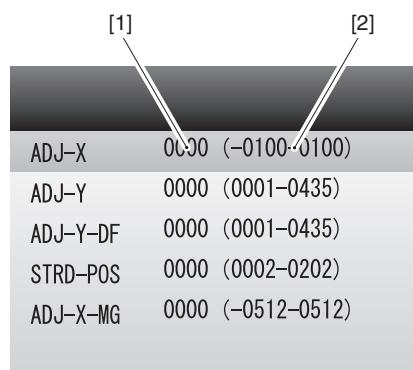

Initial/Main/Intermediate screen

- | | |
|--|-------------------------|
| To select the item: | ▲/▼ key or scroll wheel |
| To display the items on the lower layer: | OK key |
| To display the items on the upper layer: | Back key |

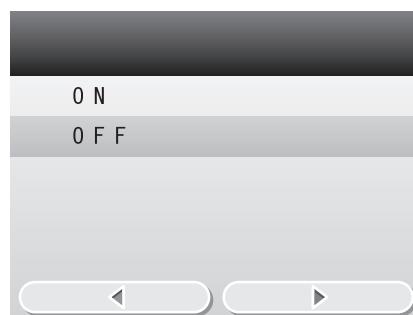

Sub screen 1

- | | |
|-------------------------------------|-------------------------|
| To select the item: | ▲/▼ key or scroll wheel |
| To display the each setting screen: | OK key |
| To display the intermediate screen: | Back key |
| Setting value: | [1] |
| Setting range: | [2] |

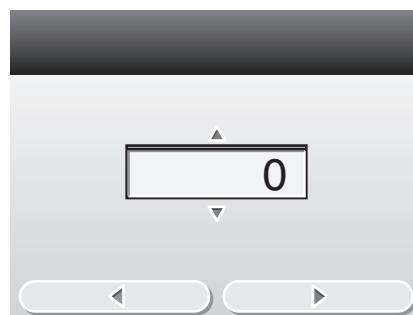

ON/OFF selection screen

- | | |
|-------------------------|-------------------------|
| To select the setting: | ▲/▼ key or scroll wheel |
| To change the setting: | OK key |
| Not change the setting: | Back key |

Numeric value entry screen 1

- | | |
|--------------------------------------|--|
| To enter the setting value: | Numeric keys |
| To increase the setting value by 1: | ► key or scroll wheel (clockwise) |
| To decrease the setting value by 1: | ◀ key or scroll wheel (counterclockwise) |
| To enter the negative setting value: | Right any key (if displayed), ▲ key or scroll wheel (counterclockwise) (continue to operate until the value smaller than 0 is displayed) |
| To change the setting: | OK key |
| Not change the setting: | Back key |

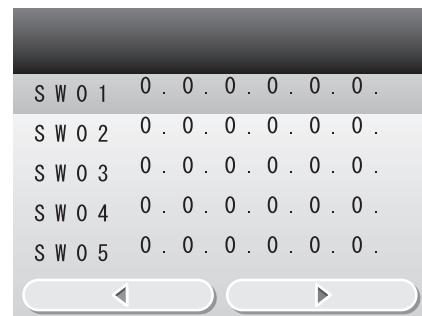

Switch selection screen

To select the switch: ▲/▼ key or scroll wheel

To display the entry screen of switch setting value: OK key

To display the small screen: Back key

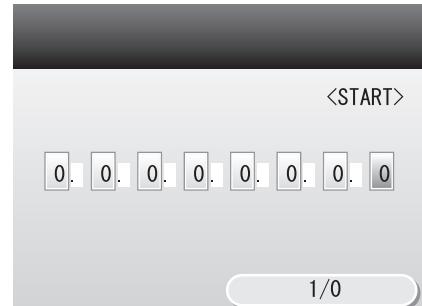

**Entry screen of switch setting value**

To select the setting item: ◀▶ key

To switch the setting value: Right any key (0 or 1 can be selected)

To change the setting: OK key

Not change the setting: Back key

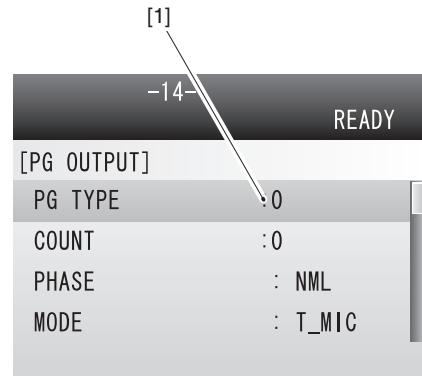

**Small screen 2**

To select the item: ▲/▼ key or scroll wheel

To display the each setting screen: OK key

To display the previous screen: Back key

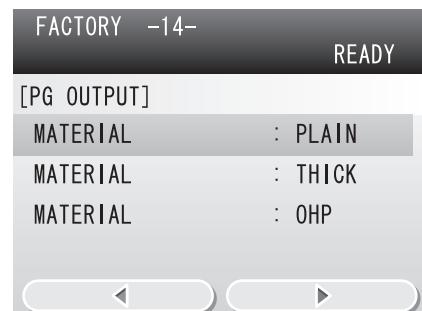

Setting value: [1]

**Item selection screen**

To select the setting: ▲/▼ key or scroll wheel

To change the setting: OK key

Not change the setting: Back key

**Numeric value entry screen 2**

To enter the setting value: Numeric keys

To change the setting: OK key

Not change the setting: Back key

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<ADJ-XY>

T-16-4

COPIER > ADJUST > ADJ-XY	
Sub item	Description
ADJ-X	<p>Adjustment of the optical image leading edge position (image reading start position in the sub-scanning direction) [When used] Incorrect copyboard reading position in the sub scanning direction. [Adjustment method]</p> <ul style="list-style-type: none"> - When the no-image width is larger than the standard value, decrease the setting value. - When the area outside of the document field is printed, increase the setting value. - When the setting value is increased by 1, the image reading start position moves toward the trailing edge by 0.1mm. <p>Setting range: -100 to 100 [Factory setting value: Differs depending on the machine.] [Value after RAM clearing: 0]</p>
ADJ-Y	<p>Adjustment of the CCD reading start cell position (image reading start position in the main-scanning direction) [When used] Incorrect copyboard reading position in the main scanning direction. [Adjustment method]</p> <ul style="list-style-type: none"> - When the no-image width is larger than the standard value, decrease the setting value. - When the area outside of the document field is printed, increase the setting value. - When the setting value is increased by 1, the image reading start position moves toward the front side by 0.1mm. <p>Setting range: 1 to 435 [Factory setting value: Differs depending on the machine.] [Value after RAM clearing: 169]</p>
ADJ-Y-DF	<p>Adjustment of the DF stream reading main-scanning position [When used] Incorrect DF stream reading position in the main scanning direction [Adjustment method]</p> <ul style="list-style-type: none"> - When the setting value is increased by 1, the image reading start position moves toward the front side by 0.1mm. <p>Setting range: 1 to 435 [Factory setting value: Differs depending on the machine.] [Value after RAM clearing: 338]</p>
STRD-POS	<p>Adjustment of the DF stream reading CCD reading position [When used] Incorrect DF stream reading position in the sub scanning direction. [Adjustment method]</p> <ul style="list-style-type: none"> - When the setting value is increased by 1, the image reading start position moves toward the leading edge by 0.1mm. <p>Setting range: -30 to 30 [Factory setting value: Differs depending on the machine. (It differs depending on whether the machine is a reader or an ADF.)] [Value after RAM clearing: 0]</p>
ADJ-X-MG	<p>Fine adjustment of the copyboard reading sub-scanning magnification [When used] The image printed in the copy output sheet is larger or smaller than the document image. [Adjustment method]</p> <p>Compare the document and copy output sheet, and make an adjustment.</p> <ul style="list-style-type: none"> - When the image printed in the output sheet is smaller than the document image, increase the value. - When the image printed in the output sheet is larger than the document image, decrease the value. <p>Setting range: -512 to 512 [Factory setting value/Value after RAM clearing: 0] [Caution: This adjustment is made to adjust the image position, and it may affect the SEND image.]</p>

<CCD>

T-16-5

COPIER > ADJUST > CCD	
Sub item	Description
W-PLT-X	<p>Entry of white level data for standard white plate Enter a correction value (X) for standard white plate on the backside of the copyboard glass using the service mode after replacement of the copyboard glass or after execution of RAM clearing for the reader unit. Setting range: 4096 to 9999 [Factory setting value/Value after RAM clearing: 8232]</p>
W-PLT-Y	<p>Entry of white level data for standard white plate Enter a correction value (Y) for standard white plate on the backside of the copyboard glass using the service mode after replacement of the copyboard glass or after execution of RAM clearing for the reader unit. Setting range: 4096 to 9999 [Factory setting value/Value after RAM clearing: 8693]</p>
W-PLT-Z	<p>Entry of white level data for standard white plate Enter a correction value (Z) for standard white plate on the backside of the copyboard glass using the service mode after replacement of the copyboard glass or after execution of RAM clearing for the reader unit. Setting range: 4096 to 9999 [Factory setting value/Value after RAM clearing: 9370]</p>
DFTAR-R	<p>Entry of the shading target value when DF is used (RED color) (Normal document reading position) Make the following adjustment using this item. [When used] An image failure occurred after execution of ADF white level adjustment (COPIER>FUNCTION>CCD>DF-WLVL1/DF-WLVL2) (caused by a dirt on the chart, etc.). Setting range: 0 to 99999 [Factory setting value: Differs depending on the machine] [Value after RAM clearing: 0]</p>

COPIER > ADJUST > CCD	
Sub item	Description
DFTAR-G	Entry of the shading target value when DF is used (GREEN color) (Normal document reading position) Make the following adjustment using this item. [When used] An image failure occurred after execution of ADF white level adjustment (COPIER>FUNCTION>CCD>DF-WLVL1/DF-WLVL2) (caused by a dirt on the chart, etc.). Setting range: 0 to 99999 [Factory setting value: Differs depending on the machine] [Value after RAM clearing: 0]
DFTAR-B	Entry of the shading target value when DF is used (BLUE color) (Normal document reading position) Make the following adjustment using this item. [When used] An image failure occurred after execution of ADF white level adjustment (COPIER>FUNCTION>CCD>DF-WLVL1/DF-WLVL2) (caused by a dirt on the chart, etc.). Setting range: 0 to 99999 [Factory setting value: Differs depending on the machine] [Value after RAM clearing: 0]

<PASCAL>

T-16-6

COPIER > ADJUST > PASCAL	
Sub item	Description
OFST-P-Y	Adjustment of the test print reading density Perform an offset adjustment for the test print reading signal when PASCAL control is performed at the time of automatic gradation correction (full correction). Setting range: -32 to 32
OFST-P-M	Adjustment of the test print reading density Perform an offset adjustment for the test print reading signal when PASCAL control is performed at the time of automatic gradation correction (full correction). Setting range: -32 to 32
OFST-P-C	Adjustment of the test print reading density Perform an offset adjustment for the test print reading signal when PASCAL control is performed at the time of automatic gradation correction (full correction). Setting range: -32 to 32
OFST-P-K	Adjustment of the test print reading density Perform an offset adjustment for the test print reading signal when PASCAL control is performed at the time of automatic gradation correction (full correction). Setting range: -32 to 32

<MISC>

T-16-7

COPIER > ADJUST > MISC	
Sub item	Description
SEG-ADJ	Adjustment of the separation level of text and photo in the text/photo/map mode Setting range: -4 to 4 [Factory setting value/Value after RAM clearing: 0]
ACS-EN	Adjustment of copyboard ACS-EN ACS-judgment area [When used] The user does not need color adjustment of the upper edge or corners of the BOOK document. (At copyboard reading) Setting range: -2 to 2 Increase the setting value to enlarge the judgment area. [Factory setting value/Value after RAM clearing: 1]
ACS-EN2	Adjustment of DF ACS-EN ACS-judgment area [When used] The user does not need color adjustment of the upper edge or corners of the BOOK document. (At DF stream reading) Setting range: -2 to 2 Increase the setting value to enlarge the judgment area. [Factory setting value/Value after RAM clearing: 1]

<VIFADJ>

T-16-8

COPIER > ADJUST > VIFADJ	
Sub item	Description
CRG-BS-Y	Charging bias setting value (Y) [When used] Low/high image density or fogging occurs but the problem cannot be solved by changing the density setting and performing special printing process. [Adjustment method] - When fogging occurs, it may be eliminated by increasing the setting value. - Increase the setting value to slightly lower the image density. - Decrease the setting value to slightly increase the image density. Setting range: -10 to 10 (Unit: 20V) [Factory setting value/Value after RAM clearing: 0]

COPIER > ADJUST > VIFADJ

COPIER > FUNCTION > INSTALL	
Sub item	Description
CNT-DATE	Setting of the date and time to start sending counter information to the server Set the date and time to start sending counter information to the server using the E-RDS third-party extended function. Refer to the date and time setting in the user mode. (12 digits: YYYYMMDDHHMM) YYYY: Year, MM: Month, DD: Day, HH: Hour, MM: Minute) Setting range: 2000/1/1 00:00 to 2037/12/31 23:59 [Factory setting value/Value after RAM clearing: 000000000000]
CNT-INTV	Setting of the interval for sending counter information to the server Set the interval of sending counter information to the server using the E-RDS third-party extended function. Setting range: 1 to 168 (Unit: 1 week) [Factory setting value/Value after RAM clearing: 24]
STRD-POS	Automatic detection of the DF stream reading CCD reading position Execute this item after performing any of the replacement of the ADF unit, replacement of the reader unit, or RAM clearing for the scanner. [Operation] Â@The reading position is adjusted while the scanner continues to move by 0.1 mm. [Time] Â@When the lamp lights up: Adjustment time: 10 sec When the lamp does not light up: Lamp adjustment time of 10 to 30 sec + Adjustment time of 10 sec [Displays] 0: Operating / 1: OK / 2: NG

<CLEAR>

T-16-11

COPIER > FUNCTION > CLEAR	
Sub item	Description
R-CON	Not used
TEL-USER	Clearing of user data and data registered in the address book SSSW is not cleared.
SRVC-DAT	Clearing of SERVICE DATA User data is not cleared.
COUNTER	Clearing of the maintenance/parts counter and mode counter to 0 Clear the counter (numerator) on the system dump list to 0.
TYPE	Initialization of USER DATA and SERVICE DATA for the specified destination setting Japan: JAPAN USA: U.S.A. Europe: EUROPE 1(area) / U.K. / SWEDEN / SWISS / AUSTRIA / DENMARK / NORWAY / HOLLAND / BERUGIUM / FINLAND / ITALY / SPAIN / PORTUGAL / IRELAND / HUNGARY / SAF / GERMANY / FRANCE / CZECH / SLOVENIA / PORLAND / GREECE / LUXEMBOURG / RUSSIA / EUROPE 2(area) Australia: AUSTRALIA / N.Z. China: CHINA Korea: KOREA Taiwan: TAIWAN Asia: SINGAPORE / HONG KONG / MALAYSIA / ASIA(area) Note) STANDARD / CANADA are not in use.
HIST	ACT-HIST Clearing of the communication management history
	ACC-HIST Clearing of the print history
	JAM-HIST Clearing of the jam history
	ERR-HIST Clearing of the error (E code) history
	ALARM Not used
	ENV-HIST Not used

COPIER > FUNCTION > CLEAR		
Sub item		Description
CARD		Clearing of the connection information of a new card reader equipment Clear data related to card IDs (department). Operation method 1) Set the department management in user registration to OFF. 2) Execute this item. 3) Execute COPIER>FUNCTION>CLEAR>ERR>E719. 4) Turn off the main power switch. 5) Remove the control card equipment. 6) Turn on the main power switch.
ERR	E355-CLR	Not used
	E719-CLR	Clearing of E719 Clear the connection information of the control card equipment and coin robo.
PWD-CLR		Clearing of the password of a system administrator
FILE-SYS		Initialization of the file system for the main and optional ROMs (File decompression)
FORMAT	FMT-USB	Not used
	FMT-LDRV	Not used
	FMT-SD	Not used
	512	Not used
	1024	Not used
	2048	Not used
CA-KEY		Initialization of the CA certificate installed (Only displayed after the activation of e-RDS function)
ERDS-DAT		Initialization of e-RDS parameters (Only displayed after the activation of e-RDS function) - ERDS SWITCH - RGW-ADDRESS - RGW-PORT - CNT-DATE - CNT-INTV - COM-LOG
DEPT-USR		Setting the ID management by department and user management to OFF
SYS-INFO		Clearing of the system administration password
ALL		Clearing of the following items - USER DATA - SERVICE DATA - JOB ID - Histories - Clearing date MEMO: USER DATA/SERVICE DATA are initialized for the default destination setting.
EAM-DAT		Not used
ELA-DAT		Not used

<MISC-R>

Sub item		Description
MISC-SW		Not used
MISC-NUM		Not used
OUTPUT	SRVC-DAT	Output of the system data list/system dump list
	SYS-DAT	Output of the system data list Mainly output the report of each service software switch and parameter used for FAX function.
	SYS-DMP	Output of the system dump list Output the service data such as the number of communication, number of received sheets, number of sent sheets, number of recording sheets, and number of errors, etc.
	CNTR	Output of the counter report Display the counter indicating how often the function of reading, recording, communication, and copy operation is performed.
	ERR-LOG	Output of error logs
	SPEC	Output of the spec report Print the current equipment condition.
	ERDS-COM	Output of e-RDS communication error logs
	SRVC-LBL	Not used

Sub item	Description
SYS-SW	Registration of system parameters (See the table shown below.)

T-16-17

PARAM > SYS-SW			
SW	Bit	Function	Remarks
05	7	Switching of whether or not to prohibit exporting of PWD in the address book (0: Do not prohibit exporting, 1: Prohibit exporting)	Initial value: 1

T-16-18

COPIER > FUNCTION > PARAM		
Sub item	Description	
SYS-NUM	001 to 100	
FAX-SW	Not used	
FAX-NUM	Not used	
NET-SW	SW01 to SW50	
NETNUM	001 to 050	
NET-CERT	VERSION	CA certificate version
	SRLNUM	Serial number
	SIGALG	Signature algorithm
	ISSUER	Issuer
	VLD_FROM	Commencement date of the expiration period
	VLD_TO	Finishing date of the expiration period
	SUBJECT	Subject of issuance
	PUB_KEY	Public key algorithm and size
	THMB_PRT	Digest (Thumb imprint)
CDC-SW	Not used	
CDC-NUM	Not used	
EXC-NAVI	Switch for whether or not to start up the installation navigation When setting this switch to 1 after the installation navigation is completed, the installation navigation does not start up at the time of next activation. Setting value: 0: Start up the navigation. 1: Do not start up the navigation. [Factory setting value/Value after RAM clearing: 0]	
DSP-PPRSE	Setting of whether or not to display the paper setting screen when ACS setting is set to ON at the time of copy operation Setting value: 0: Do not display the screen. 1: Display the screen. [Factory setting value/Value after RAM clearing: 0]	
SET-PPRSZ	Setting of the ACS document size when DSP-PPRSEL is set to ON When the document size is unknown, a screen prompting an operator to enter the document size is displayed. When the sizes other than UNKNOWN are specified, ACS judgment processing is performed based on the specified document size. Setting range: 0 to 20 Setting value: 0: UNKNOWN, 2: A4, 3: A5, 7: B5, 12: LGL, 13: LTR, 60: STMT [Factory setting value/Value after RAM clearing: 0]	
DSP-TNROW	Setting of whether or not to display "Toner Low" Setting value: 0: Do not display the screen. 1: Display the screen. [Factory setting value/Value after RAM clearing: 1 (0 for iR C1022/iR C1022i (for US) only)]	
SCAN-SW	Not used	
SCAN-NUM	Not used	

COPIER > FUNCTION > PARAM	
Sub item	Description
APS-LTLG	Switching of whether or not to display "Automatic (LTR/LGL)" (For future expansion) Setting value: 0: Do not display the item, 1: Display the item [Factory setting value/Value after RAM clearing: 0: MF9330C/ MF9340C/ MF9370C/ iR C1021/ iR C1021i/ iR C1022/ iR C1022i/ iR C2110F/ iR C2110N 1: Other models]
DSP-SCWD	Switching of whether or not to enable ScanToMedia (For future expansion) Setting value: 0: Enable the function, 1: Disable the function [Factory setting value/Value after RAM clearing: 0]
DSP-MDPR	Switching of whether or not to enable MediaPrint (For future expansion) Setting value: 0: Enable the function, 1: Disable the function [Factory setting value/Value after RAM clearing: 0]
DSP-ACS	Switching of whether or not to display [ACS Function Adjustment] when selecting [Additional Func.] > [Adjustment/Cleaning] > [ACS Function Adjustment]. Setting value: 0: Do not display the item, 1: Display the item [Factory setting value/Value after RAM clearing: 0: IR C1022i / IR C1021I / iRC 1021i / iRC 1022 / iRC 1021 for North America, Europe, and Australia 1: Other models]

SYS-NUM	Not used

<VIFFNC>

T-16-20

COPIER > FUNCTION > VIFFNC	
Sub item	Description
RSTR-DCN	Restoration of the backup information of DC controller NVRAM retained in the controller's NVRAM to the DC controller NVRAM Perform the following procedure after replacement of the DC controller PCB. 1) Using this item, restore the backup data of the DC controller retained in the NVRAM of the main controller PCB to the NVRAM of the DC controller PCB. 2) Print the user data list by selecting "Initial setting/registration > Report output > List print > User data list". 3) Execute full correction by selecting "Initial setting/registration > Adjustment > Cleaning > Automatic gradation correction > Full correction".
CLR-DCN	Clear of the backup information of DC controller NVRAM retained in the controller's NVRAM to the DC controller NVRAM
SEL-TALC	Setting of TALC paper ETB cleaning is performed 10 times at initial rotation.
INV-ATVC	Setting to enable ATVC Ignore ATVC and use a default value for the output value of each bias.
IMP-BNDG	Setting for banding improvement Perform idling with engagement of the developing assembly and disengagement of ETB.
AANY-0 / AANY-1	Setting of any-any mode 0 / any-any mode 1 Combination of any-any mode 0 / any-any mode 1 AANY-0=0/AANY-1=0: Perform constant-speed cleaning after a job only when the paper size does not match. AANY-0=1/AANY-1=0: Perform high-speed cleaning after all jobs. AANY-0=0/AANY-1=1: Perform constant-speed cleaning after all jobs. AANY-0=1/AANY-1=1: Perform high-speed cleaning after a job only when the paper size does not match.

<SPLMAN>

T-16-21

COPIER > FUNCTION > SPLMAN	
Sub item	Description
SPL27767	Setting of high-resistance paper Decrease the final output value of transfer bias by 250V. (Only when high-humidity OHT/high-humidity gloss film is not specified) Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL27267	Setting of 4mil OHT Decrease the final output value of transfer bias by 500V. (Only when high-humidity OHT/high-humidity gloss film/high-resistance paper is not specified) Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL23866	Setting of calcium carbonate paper Apply the maximum attraction bias wherever possible regardless of the environment. Since there is no result of detection of attraction paper resistance, set a transfer bias from the environment. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]

COPIER > FUNCTION > SPLMAN	
Sub item	Description
SPL25407	Setting of thin paper/rough paper Change the process speed to 4/5 speed. Use the temperature control table for thin paper/rough paper. (Thin paper only) Do not change the process speed, but change the temperature control table. (Plain paper, Thick paper 2 only) Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL47267	Setting of high-humidity OHT Decrease the final output value of transfer bias by 100V. (OHT only) Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL47667	Setting of prevention of re-transfer Decrease the transfer bias for the 3rd/4th station depending on the environment. (Only when high-humidity OHT/high-humidity gloss film/high-resistance paper/4mil OHT is not specified) Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL34691	Setting for improvement of color misregistration Rotate the fixing motor in +0.5% speed up to the 10th page. Secure the wait time of 10 seconds when the 1st page is picked up at the time of initial rotation, mode switching, or toner ejection. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL14682	Setting for prevention of fogging 2 Turn off the pre-exposure operation. Do not add a transfer bias as measures to prevent a bird's foot print on the trailing edge. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL25200	Setting for improvement of OHT transparency Set the controlled temperature at 180 degC, and perform idling of the fixing machine for 45 seconds before initial rotation. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL53649	Setting of engagement for monochrome mode Perform full engagement of the ETB. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL35607	Setting of measures for hot offset Decrease the controlled temperature by 10 degC without exception. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL14660	Not used
SPL65676	Switching of the margin at the lead edge (in the direction of increasing the margin) Increase the margin at the lead edge of the paper. The standard margin is set if the setting conflicts with that of the decreased margin at the lead edge. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL65677	Switching of the margin at the lead edge (in the direction of decreasing the margin) Decrease the margin at the lead edge of the paper. The standard margin is set if the setting conflicts with that of the increased margin at the lead edge. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL68676	Switching of the margin at the right/left side (in the direction of increasing the margin) Increase the margin at the right and left side of the paper. The standard margin is set if the setting conflicts with that of the decreased margin at the right/left side. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL68677	Switching of the margin at the right/left side (in the direction of decreasing the margin) Decrease the margin at the right and left side of the paper. The standard margin is set if the setting conflicts with that of the increased margin at the right/left side. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]
SPL25607	Switching of the print mode setting Switch the print mode for "plain paper" from "Normal" to "Light" as measures for hot offset at overseas countries. Setting value: 0: OFF, 1: ON [Factory setting value/Value after RAM clearing: 0]

16.2.5 OPTION

16.2.5.1 OPTION List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<BODY>

T-16-22

COPIER > OPTION > BODY	
Sub item	Description
DFDST-L1	Adjustment of the level of dust detection when DF is used (Correction of an interval between sheets) When the value is increased, the dust detection level is increased. (This makes it easier to detect the dust causing low-density lines.) Setting range: 1 to 9999
DFDST-L2	Adjustment of the level of dust detection when DF is used (Detection after a job) When the value is increased, the dust detection level is increased. (This makes it easier to detect the dust causing low-density lines.) Setting range: 1 to 9999

COPIER > OPTION > BODY	
Sub item	Description
TMIC-BK	Switching of the method of correcting the end of TMIC_BK_PASCAL_LUT (high-density area) Setting value: 0: Correction of the end of BK_LUT for PDL is set to OFF. Correction of the end of Bk_LUT for copy operation is set to OFF. 1: Correction of the end of BK_LUT for PDL is set to ON. Correction of the end of Bk_LUT for copy operation is set to ON. [Factory setting value/Value after RAM clearing: 1]
AST-SEL	AST-SEL for the change of the advanced smoothing range (AST level SELect) Setting range: 0 to 3 [Factory setting value/Value after RAM clearing: 2]
TMIC-CMY	Switching of the method of correcting the end of TMIC_PASCAL_LUT (high-density area) 0: Correction of the end of LUT for PDL is set to OFF. Correction of the end of LUT for copy operation is set to OFF. 1: Correction of the end of LUT for PDL is set to ON. Correction of the end of LUT for copy operation is set to ON. [Factory setting value/Value after RAM clearing: 1]
TMC-SLCT	Switching of the coefficient used for error diffusion correction Setting value: 0: Small granularity for CMYK 1: Small granularity for CMY, Large granularity + large stability for K 2: Large granularity + large stability for CMYK [Factory setting value/Value after RAM clearing: 0]
IFXEMPL-Z	Control of the additional function of the attribute flag when printing a message received by email Setting value: 0: For PDL_Text mode (CardDirect_Gray Correction ODM + Background On) 1: For PDL_Photo mode (CardDirect_Normal ODM + Background Off) 2: For Scan_Photo mode (CardDirect_Normal ODM + Background On) [Factory setting value/Value after RAM clearing: 0] * The Text mode is set as default because it is considered that many of the email messages contain documents mixed with text. ODM for CardDirect is used regardless of PDL or Scan because there is a restriction in terms of input/output color space.

<USER>

T-16-23

COPIER > OPTION > USER	
Sub item	Description
COUNTER1	Not used
COUNTER2	Selection of the counter type for Counter 2 Setting range: 0 to 999 [Factory setting value/Value after RAM clearing: (Reference: External and Controls > Counters)]
COUNTER3	Selection of the counter type for Counter 3 Setting range: 0 to 999 [Factory setting value/Value after RAM clearing: (Reference: External and Controls > Counters)]
COUNTER4	Selection of the counter type for Counter 4 Setting range: 0 to 999 [Factory setting value/Value after RAM clearing: (Reference: External and Controls > Counters)]
COUNTER5	Selection of the counter type for Counter 5 Setting range: 0 to 999 [Factory setting value/Value after RAM clearing: (Reference: External and Controls > Counters)]
COUNTER6	Selection of the counter type for Counter 6 Setting range: 0 to 999 [Factory setting value/Value after RAM clearing: (Reference: External and Controls > Counters)]
CNT-SW	Switching of the type of counter display Setting range: 0 to 4 [Factory setting value/Value after RAM clearing: 0]
TNRB-SW	Switching of whether or not to display the toner bottle counter Setting value: 0: Do not display the toner bottle counter. 1: Display the toner bottle counter. [Factory setting value/Value after RAM clearing: 0]
SCALL-SW	Turning ON/OFF call button function (For future expansion) Setting value: 0: Call button function OFF 1: Call button function ON [Factory setting value/Value after RAM clearing: 0]
SCALLCMP	Actions when repair of call button function is completed (For future expansion) Used when actions for a repair request are completed.

Software counter specifications

100 to 199: Total
 200 to 299: Copy (When more numbers are needed, add the number from 001.)
 300 to 399: Print
 400 to 499: Copy and print
 500 to 599: Scan
 600 to 699: Box, Media/Pic/Mobile phone print
 700 to 799: Reception print
 800 to 899: Report print
 900 to 999: Sending/Box/Remote/Media

<Explanation of the symbols in the table>

- yes: Valid counter for this machine

- Large size: Paper larger than B4-size
- Small size: B4-size or smaller paper
- Numbers 1, 2 indicated under "Counter Details": Number of counts for large size paper

- Total A: Total number of counts for operation other than "local copy + remote copy"
- Total B: Total number of counts for operation other than "local copy + remote copy + Box print"
- Copy: Local copy + remote copy + Box print
- Copy A: Local copy + remote copy + Box print
- Print: PDL print + report print + Box print
- Print A: PDL print + report print
- Scan: B&W scan + color scan

Numbers from 191 to 194 are not available for the settings of Counter 2 to 6.

16.2.6 COUNTER

16.2.6.1 COUNTER List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<TOTAL>

T-16-29

COPIER > COUNTER > TOTAL	
Display/setting/adjustment range: 00000000 to 99999999 When 99999999 is exceeded, the value returns to 00000000.	
Sub item	Description
SERVICE1	Total counter for service: 1 Count up the counter value when the paper is delivered to outside of the printer. (Perform count-up regardless of large or small size.)
SERVICE2	Total counter for service: 2 Count up the counter value when the paper is delivered to outside of the printer. (Count up the value by 2 for large size, and 1 for small size.)
TTL	Total counter (copy + printer + FAX + composite function)
COPY	Total copy counter Count up the counter value when copy operation is executed and the paper is delivered to outside of the printer.
PDL-PRT	PDL print counter Count up the counter value when the paper is delivered to outside or stacked in double-sided mode according to the charging counter at the time of PDL printing. Do not perform count-up when a blank sheet is delivered or stacked. Count up the value by 1 for large and small sizes.

COPIER > COUNTER > TOTAL	
Display/setting/adjustment range: 00000000 to 99999999 When 99999999 is exceeded, the value returns to 00000000.	
Sub item	Description
FAX-PRT	FAX reception print counter Count up the counter value when the paper is delivered to outside or stacked in double-sided mode according to the charging counter at the time of FAX reception. Do not perform count-up when a blank sheet is delivered or stacked. Count up the value by 1 for large and small sizes. The counter value can be cleared.
RPT-PRT	Report print counter Count up the counter value when the paper is delivered to outside or stacked in double-sided mode according to the charging counter at the time of report printing. Do not perform count-up when a blank sheet is delivered or stacked. Count up the value by 1 for large and small sizes. The counter value can be cleared.
2-SIDE	Double-sided copy/print counter Count up the number of times double-sided copying/printing is performed when the paper is delivered to outside or stacked in double-sided mode according to the charging counter. Do not perform count-up when a blank sheet is delivered or stacked. Count up the value by 1 for large and small sizes. The counter value can be cleared.
SCAN	Scanning counter Count up the number of times scanning is performed when reading is completed according to the charging counter. Count up the value by 1 for large and small sizes. The counter value can be cleared.

<PICK-UP>

T-16-30

COPIER > COUNTER > PICK-UP	
Display/setting/adjustment range: 00000000 to 99999999 When 99999999 is exceeded, the value returns to 00000000.	
Sub item	Description
C1	Cassette pickup total counter Display the number of sheets picked up from Cassette.
C2	Option cassette pickup total counter Display the number of sheets picked up from option cassette.
C3	Not used
C4	Not used
MF	Manual feed total counter Display the number of sheets picked up from the manual feed pickup unit.
DK	Not used
2-SIDE	Double-sided pickup total counter Display the number of sheets picked up in double-sided mode.

<FEEDER>

T-16-31

COPIER > COUNTER > FEEDER	
Display/setting/adjustment range: 00000000 to 99999999 When 99999999 is exceeded, the value returns to 00000000.	
Sub item	Description
FEED	Total counter for documents picked up by ADF
DFOP-CNT	Not used

<JAM>

T-16-32

COPIER > COUNTER > JAM	
Display/setting/adjustment range: 00000000 to 99999999 When 99999999 is exceeded, the value returns to 00000000.	
Sub item	Description
TOTAL	Total jam counter
FEEDER	Feeder total jam counter
SORTER	Not used
2-SIDE	Duplexing unit jam counter
MF	Multi-feeder jam counter
C1	Cassette jam counter
C2	Option cassette jam counter
C3	Not used
C4	Not used

T-16-33

COPIER > COUNTER > MISC	
Sub item	Description
WST-TNR	Not used

<DRBL-2>

T-16-34

COPIER > COUNTER > DRBL-2	
Display/setting/adjustment range: 0000000 to 9999999 When 9999999 is exceeded, the value returns to 0000000. Use this item as a guide to know the timing of replacement of consumable parts. Be sure to clear the value after the replacement of parts.	
Sub item	Description
DF-SP-PD	Number of times the paper goes through the ADF separation pad Display range: 0 to 999999 (Limit: 50000) [Factory setting value/Value after RAM clearing: 0]
DF-SP-RL	Number of times the paper goes through the ADF separation roller Display range: 0 to 999999 (Limit: 50000) [Factory setting value/Value after RAM clearing: 0]

16.3 FEEDER

16.3.1 ADJUST

16.3.1.1 ADJUST List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<ADJUST>

T-16-35

FEEDER > ADJUST	
Sub item	Description
DOCST	Adjustment of the position to stop the document when it is picked up from ADF (picked up from the document tray) Setting range: -100 to 100 For reference: When the value is increased, the margin at the lead edge is decreased.
LA-SPEED	Adjustment of the document feeding speed at DF stream reading Setting range: -512 to 512

16.3.2 FUNCTION

16.3.2.1 FUNCTION List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<FUNCTION>

T-16-36

FEEDER > FUNCTION	
Sub item	Description
FEED-CHK	Checking of paper transport at a single ADF Setting value: 0: Single-sided, 1: Double-sided
SL-ON	Start of solenoid operation
MTR-ON	Start of motor operation
FEED-ON	Checking of paper transport at a single ADF

16.4 FAX

16.4.1 SSSW

16.4.1.1 SSSW List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-16-37

SSSW No.	Bit No.	Function
01		(Error, Copy function-related)
	0	Error code output for service engineer
02		(Network connecting condition setting-related)
	4	Forbid communication control that supports V34 CCRTN OFF IP network
	7	Connect as F-network 2-type terminal
03		(Echo-related)
	0	TCF EQM check
	1	Transmit echo protection tone to V.29
	7	Output 1080Hz before CED

SSSW No.	Bit No.	Function
04		(Communication trouble-related)
	1	Check frequency of CI signal
	2	V.21 end flag
	3	Forbid duplex waiting of T.30 node
	4	T.30 node F echo timer
	5	Check frequency of CI signal at PBX settings
	6	Do not deliver CNG at manual transmission
05		(Standard function, DIS signal setting-related)
	1	mm/inch convert (text mode)
	2	mm/inch convert (text photo/photo mode)
	3	Forbid bit delivery after bit 33 of DIS
	4	Cut paper declaration
06		(Scanning condition settings)
	4	Scanning width 0: A4, 1: LTR
12		(Page timer settings-related) Time by 2-bit combination (0, 0): 8 min, (0, 1): 16 min, (1, 0): 32 min, (1, 1): 64min
		When bit 7 is 0: - 1 page timeout time is specified with bit 1 and bit 0 regardless of any mode communication. When bit 7 is 1: - The timeout time for general transmission is specified with bit 1 and bit 0, for HT transmission with bit 3 and bit 2, for reception with bit 5 and bit 4
	0	1 page timeout time (transmission)
	1	
	2	1 page timeout time (HT transmission)
	3	
	4	1 page timeout time (reception)
	5	
	7	1 page timeout time
13	2	Convert mm/inch when sending received image
14		
	2	Whether executing inch to mm conversion in both main and sub scanning directions, or in sub scanning direction only
15	4	Perform inch-type resolution declaration
	2	Accept receiving ND line: Host machine line
18	6	Detect continuous signal at F/T switching
	0	Detect carrier disconnection between DCS and TCF
22	1	Waiting time for carrier disconnection between DCS and TCF
	2	Forbid communication control for IP network
	0	Forbid delivering NSX
25	3	Forbid manual polling operation
		(Report display function settings-related)
	0	Prioritize received phone number to dialed number
	2	When receiving blank CSI, regard the CSI as not-received
28	3	Message language selection user SW
	0	Forbid V8 procedure at calling side
	1	Forbid V8 procedure at receiving side
	2	Forbid V8 late start at calling side
	3	Forbid V8 late start at receiving side
30	4	Forbid fallback start from V.34 receiving side
	5	Forbid fallback start from V.34 sending side
32		
	5	New dial tone detection method
33		
	5	0: NCU2004, 1: NCU2002
	0	(Record) whether to count B4 size as large size or not
33	2	(Scan) whether to count B4 size as large size or not
	5	Display toner replacement counter

SSSW No.	Bit No.	Function
35		
	0	e-RDS function (0: OFF/1: ON)

16.4.2 MENU

16.4.2.1 MENU List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-16-38

Registration mode of menu switch		
Number	Parameter	Description of the selection
05	ON/OFF of NL equalizer	0: OFF, 1: ON
06	Telephone line monitor	0: DIAL, 1: SERVICEMAN1, 2: SERVICEMAN2, 3: OFF
07	Delivery level (ATT)	0-15
08	Upper limit of V.34 modulating speed	0: 3429BAUD, 1: 3200BAUD, 2: 3000BAUD, 3: 2800BAUD, 4: 2743BAUD, 5: 2400BAUD
09	Upper limit of V. 34 data speed	(Unit: kbps) 0: 33.6, 1: 31.2, 2: 28.8, 3: 26.4, 4: 24.0, 5: 21.6, 6: 19.2, 7: 16.8, 8: 14.4, 9: 12.0, 10: 9.6, 11: 7.2, 12: 4.8, 13: 2.4
10	Frequency of pseudo CI signal	0: 50 Hz, 1: 25 Hz, 2: 17 Hz

16.4.3 NUM

16.4.3.1 NUM List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-16-39

Numeric parameter setting mode		
Number	Parameter	Available setting range
02	RTN delivery condition X	1 to 99%
03	RTN delivery condition n	2 to 99 times
04	RTN delivery condition m	1 to 99 lines
05	NCC pause time (before ID code)	1 to 60 s
06	NCC pause time (after ID code)	1 to 60 s
10	T.30 T0 timer	Generally 55s
11	T.30 T1 timer (for receiving)	0 to 9999 (France = 3500, Others = 3000)
12	Maximum number of receiving lines	0 to 65535 (lines) Unlimited for 0
13	T.30 EOL timer	500 to 3000 (Default: 55s)
15	Threshold for hooking and on-hook	0 to 999
16	Time to temporarily response at FAX/TEL switching	0 to 9
17	Pseudo RBT cadence ON time	0 to 999
18	Pseudo RBT cadence OFF time (short)	0 to 999
19	Pseudo RBT cadence OFF time (long)	0 to 999
20	Pseudo ring tone cadence ON time	0 to 999
21	Pseudo CI cadence OFF time (short)	0 to 999
22	Pseudo CI cadence OFF time (long)	0 to 999
23	CNG detection level at FAX/TEL switching	0 to 7
24	Pseudo RBT delivery level at FAX/TEL switching	10 to 20 (100V), 0 to 20 (120/ 230V)
25	CNG monitoring time when answer phone is used	0 to 999
26	Level to detect no-sound when answer phone is used	0 to 7
27	Preamble detection time of V21 low-speed flag	20 (* 10ms)
51	Threshold value of hook detection	10 to
53	Set the number of DTMF ringing times at FAX remote reception	10 to (Default: 25)
54	Set the transmission time of BusyTone when the handset is used	
55	Cycle to obtain data of environment log	0 to 480 min (Default: 60min) (No data is obtained with 0)
56	Select counter type to be displayed at counter 1	101
57	Select counter type to be displayed at counter 2	0 to 999
58	Select counter type to be displayed at counter 3	0 to 999
59	Select counter type to be displayed at counter 4	0 to 999
60	Select counter type to be displayed at counter 5	0 to 999
61	Select counter type to be displayed at counter 6	0 to 999
74	Port number of e-RDS RGW	
75	Transmission interval of e-RDS for 3rd party	

16.4.4 NCU

16.4.4.1 NCU List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<TONE/ PULSE>

Operating Method

(1) Setting tone parameter

With "#NCU" displayed, press set key -> Press "#TONE/PULSE" set key
-> Pressing "#TONE" set key makes the setting mode for tone parameter.

(2) Setting pulse parameter

With "#NCU" displayed, press set key -> Press "#TONE/PULSE" set key.
-> Pressing "#PULSE" set key makes the setting mode for pulse parameter.

T-16-40

Item		Function	Setting Range
TONE	01	Tone signal delivery time (PSTN)	10 to 9999 (ms)
	02	Minimum pause time (PSTN)	10 to 9999 (ms)
PULSE	PULSE FORM	Pulse digit format	0 -> DP (N) 1 -> DP (N + 1) 2 -> DP (10 - N)
		01	Pulse dial speed (10 pps)
	03	Pulse dial make ratio	10 to 90 (%)
		04	Minimum pause time
			10 to 9999 (ms)

<DIAL TONE>

(1) Bit switch

T-16-41

Bit No.	Function	1	0
0	Frequency sensing method	Modem	Tonal counter
1			
2	Signal frequency	Changes	No change
3			
4	Screening intermittent signal	From ON	From both
5			
6	Signal method	Continuous	Intermittent
7	Signal sensing	Yes	No

(2) Numeric parameter

T-16-42

Parameter No.	Function	Setting Range
01	T0 timer	0 to 9999 (x 10 ms)
02	T1 timer	0 to 9999 (x 10 ms)
03	T2 timer	0 to 9999 (x 10 ms)
04	T3 timer	0 to 9999 (x 10 ms)
05	T4 timer	0 to 9999 (x 10 ms)
06	Signal sensing table	0 to 16
07	Signal sensing level	0 to 7
08	Number of signal frequencies	0 to 9999 (pce)

<2nd DIAL TONE>

(1) Bit switch

T-16-43

Bit No.	Function	1	0
0	Frequency sensing method	Modem	Tonal counter
1			
2	Signal frequency	Changes	No change
3			
4	Screening intermittent signal	From ON	From both
5			
6	Signal method	Continuous	Intermittent
7	Signal sensing	Yes	No

(2) Numeric parameter

T-16-44

Parameter No.	Function	Setting Range
01	T0 timer	0 to 9999 (x 10 ms)

Parameter No.	Function	Setting Range
02	T1 timer	0 to 9999 (x 10 ms)
03	T2 timer	0 to 9999 (x 10 ms)
04	T3 timer	0 to 9999 (x 10 ms)
05	T4 timer	0 to 9999 (x 10 ms)
06	Signal sensing table	0 to 16
07	Signal sensing level	0 to 7
08	Number of signal frequencies	0 to 9999 (pce)

<BUSY TONE 0>

(1) Bit switch

T-16-45

Bit No.	Function	1	0
0			
1			
2	Signal frequency	Changes	No change
3			
4	Screening intermittent signal	From ON	From both
5			
6	Signal method	Continuous	Intermittent
7	Signal sensing	Yes	No

(2) Numeric parameter

T-16-46

Parameter No.	Function	Setting Range
01		
02	T1 timer	0 to 9999 (x 10 ms)
03	T2 timer	0 to 9999 (x 10 ms)
04	T3 timer	0 to 9999 (x 10 ms)
05	T4 timer	0 to 9999 (x 10 ms)
06	Signal sensing table	0 to 16
07	Signal sensing level	0 to 7
08	Number of signal frequencies	0 to 9999 (pce)

<BUSY TONE 1>

(1) Bit switch

T-16-47

Bit No.	Function	1	0
0			
1			
2	Signal frequency	Changes	No change
3	RBT signal detection	Yes	No
4	Screening intermittent signal	From On	From Both
5	RBT signal checking cycle	1 cycle	1/2 cycle
6	Signal format	Continuous	Intermittent
7	Signal sensing	Yes	No

(2) Numeric parameter

T-16-48

Parameter No.	Function	Setting Range
01		
02	T1 timer	0 to 9999 (x 10 ms)
03	T2 timer	0 to 9999 (x 10 ms)
04	T3 timer	0 to 9999 (x 10 ms)
05	T4 timer	0 to 9999 (x 10 ms)
06	Signal sensing table	0 to 16
07	Signal sensing level	0 to 7
08	Number of signal frequencies	0 to 9999 (pce)

<REORDER TONE>

(1) Bit switch

T-16-49

Bit No.	Function	1	0
0			

Bit No.	Function	1	0
1	Signal sensing method	FED	FR3
2	Signal frequency	Changes	No change
3			
4	Screening intermittent signal	From ON	From both
5			
6	Signal format	Continuous	Intermittent
7	Signal sensing	Yes	No

(2) Numeric parameter

T-16-50

Parameter No.	Function	Setting Range
01		
02	T1 timer	0 to 9999 (x 10 ms)
03	T2 timer	0 to 9999 (x 10 ms)
04	T3 timer	0 to 9999 (x 10 ms)
05	T4 timer	0 to 9999 (x 10 ms)
06	Signal sensing table	0 to 16
07	Signal sensing level	0 to 7
08	Number of signal frequencies	0 to 9999 (pce)

<AUTO RX>

(1) Numeric parameter

T-16-51

Parameter No.	Function	Setting Range
01	CI ON time	0 to 9999 (x 10 ms)
02	CI LONG ON time	0 to 9999 (x 10 ms)
03	CI OFF time	0 to 9999 (x 10 ms)
04	CI LONG OFF time	0 to 9999 (x 10 ms)
05	CI MAX OFF time	0 to 9999 (x 10 ms)
06	CI WAIT time	0 to 9999 (x 10 ms)
07	CI frequency	0 to 9999 (cycle)
08	Lower limit of CI frequency	0 to 9999 (Hz)
09	Upper limit of CI frequency	0 to 9999 (Hz)

<CNG DETECT>

(1) Numeric parameter

T-16-52

Parameter No.	Setting description	Setting range
01	At F/T switching	CNG MIN ON time
02		CNG MAX ON time
06		Hit ratio
07	When answer phone is directly connected	CNG MIN ON time
08		CNG MAX ON time
09		instantaneous interruption tolerable time
11		Number of detection
12		Hit ratio

<SPECIAL N>

T-16-53

Number	Setting Description	Setting Range
04	CTC/EOR delivery timing	1 to 9 (times)
05	High speed flag delivery time in ECM mode	20 to 500 (x 10 ms)
06	Continuous delivery of 1 before image signal delivery	20 to 200 (x 10 ms)
07	Time from S relay ON to P relay OFF	0 to 9999 (x 10 ms)
08	Time that ring back tone parameter is ON	0 to 9999 (x 10 ms)
09	Time that ring back tone parameter is OFF	0 to 9999 (x 10 ms)
11	Lower limit in setting range for redial interval	2 to 99 (min)
12	DTMF delivery level (H1-3, PSTN)	0 to -16 (dBm)
13	DTMF delivery level (L1-4, PSTN)	0 to -16 (dBm)
14	ECM T5 timer	60 to 480 (sec)
15	ECM CD timer	0 to 9999 (ms)
16	CED detection level	0 to 9

Number	Setting Description	Setting Range
17	Upper limit for F/T calling time	0 to 9999 (sec)
19	Number of trail edge margin (lines) at image's trail edge	0 to 9999 (lines)
20	Time to capture F/T line	0 to 9999 (sec) Special SW17 bit 4
24	Delivery time for V34 control channel flag	0 to 100 (x 10 ms)
25	Delivery time for V34 primary channel flag	20 to 500 (x 10 ms)
26	V34 fallback speed	1 to 4 (x 2.4 kbps)
27	Number of PPR to start V34 fallback	1 to 9 (times)
30	T2 timer	6 to 30 (sec)
40	Setting T2 timer value for V34 communication	
41	Synchronization interval for RETRY to use for synchronization of V8 procedure signal 'PC -> CC' at the time of receiving FAX	
44	Number of times of RETRY to use for synchronization of V8 procedure signal 'PC -> CC' at the time of receiving FAX	
45	Wait time when the DT detection function that is executed before calling is disabled	
46	Time to identify DialTone signal	
47	Time of not being disconnected in the case that DialTone signal is disconnected	
65	Number of maximum lines of A4 paper at the time of sending cut paper	
66	Number of maximum lines of B4 paper at the time of sending cut paper	

<RKEY>

(1) Numeric parameter

T-16-54

Parameter No.	Function	Setting Range
01	Flash connection time	0 to 9999 (x 10 ms)
02	Grounding time	0 to 9999 (x 10 ms)

<PBX DIAL TONE>

(1) Bit switch

T-16-55

Bit No.	Function	1	0
0	Frequency sensing method	Modem	Tonal counter
1			
2	Signal frequency	Changes	No change
3			
4	Screening intermittent signal	From ON	From both
5			
6	Signal format	Continuous	Intermittent
7	Signal sensing	Yes	No

(2) Numeric parameter

T-16-56

Parameter No.	Function	Setting Range
01	T0 timer	0 to 9999 (x 10 ms)
02	T1 timer	0 to 9999 (x 10 ms)
03	T2 timer	0 to 9999 (x 10 ms)
04	T3 timer	0 to 9999 (x 10 ms)
05	T4 timer	0 to 9999 (x 10 ms)
06	Signal sensing table	0 to 16
07	Signal sensing level	0 to 9
08	Number of signal frequencies	0 to 9999 (pce)

<PBX BUSY TONE>

(1) Bit switch

T-16-57

Bit No.	Function	1	0
0			
1			
2	Signal frequency	Changes	No change
3			
4	Screening intermittent signal	From ON	From both
5			
6	Signal format	Continuous	Intermittent
7	Signal sensing	Yes	No

(2) Numeric parameter

T-16-58

Parameter No.	Function	Setting Range
01		
02	T1 timer	0 to 9999 (x 10 ms)
03	T2 timer	0 to 9999 (x 10 ms)
04	T3 timer	0 to 9999 (x 10 ms)
05	T4 timer	0 to 9999 (x 10 ms)
06	Signal sensing table	0 to 16
07	Signal sensing level	0 to 9
08	Number of signal frequencies	0 to 9999 (pce)

16.5 TESTMODE

16.5.1 SYSTEM

16.5.1.1 SYSTEM List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<DRAM>

T-16-59

TESTMODE > SYSTEM > DRAM	
Check DRAM	
Sub item	Description
TEST1	Check writing/reading of data in DRAM area (excluding system work area)
TEST2	Check data reading (high speed)

<ACC>

T-16-60

TESTMODE > SYSTEM > ACC	
Check ID control card reader	
Sub item	Description
NCR-CRD	Display: presence/absence of NCR device or the card
CRD-KIND	Card type (the first 3-digit characters)
CRD-STYL	Card format (the second 3-digit characters)
READ-STS	Read status (the third 3/2-digit characters)
NCR-STS	Device status (the fourth character)
NCR-VER	Version of NCR device (4-digit numeric figures)

<SPEAKER>

T-16-61

TESTMODE > SYSTEM > SPEAKER	
Check SPEAKER	
Sub item	Description
ON	When "ON" is selected, increase the volume step by step from the minimum up to maximum whenever OK key is pressed. When reaching the maximum volume, it goes back to the minimum volume through silent state.
MIN	When "MIN" is selected, set off the minimum volume with OK key.
MAX	When "MAX" is selected, set off the maximum volume with OK key.
VOL	Set off the volume according to the hardware volume.

16.5.2 SCAN

16.5.2.1 SCAN List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<ADJUST>

T-16-62

TESTMODE > SCAN > ADJUST	
Sub item	Description
WLVL-ADJ	Correct white level in copyboard scanning and stream scanning to determine shading target.

TESTMODE > SCAN > ADJUST	
Sub item	Description
SCAN READ	Start copyboard scanning operation to read white level of the document (original).
FLOW SCAN READ	Start stream scanning operation to read white level at stream scanning.
KDT-DF1-R	Display DT-DF1-R
KDT-DF1-G	Display DT-DF1-G
KDT-DF1-B	Display DT-DF1-B
KDT-DF2-R	Display DT-DF2-R
KDT-DF2-G	Display DT-DF2-G
KDT-DF2-B	Display DT-DF2-B
ADF-ADJ	Execute adjustment of ADF
DF-STRM	Not used
DF-SPEED	Not used
DF-OFFST	Not used
DF-POSAD	Not used

<SENSOR>

T-16-63

TESTMODE > SCAN > ADJUST	
Checking Sensor	
Sub item	Description
HP-SENS	Home position sensor 1: HP, 0: anything other than HP
TP-SENS	Sensor for paper in tray 1: presence of paper, 0: no paper
REG-SENS	Pre-registration sensor 1: presence of paper, 0: no paper
ESS-SENS	Front door sensor 1: ON, 0: OFF

<ADFTEST>

T-16-64

TESTMODE > SCAN > ADFTEST	
ADF Feeding Test	
Execute feeding operation according to the scanning feeding speed (specified in SPEED, 2-SIDE, COUNT)	
Sub item	Description
SPEED	Not used
2-SIDE	Select ON/OFF for duplex mode
COUNT	Not used
START	Start feeding

<BOOKFEED>

T-16-65

TESTMODE > SCAN > BOOKFEED	
Testing Book Feed Operation	
Sub item	Description
PAGE	Display the number of pages that had been book-fed
START	Start book feeding

16.5.3 PRINT

16.5.3.1 PRINT List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<PRINT>

T-16-66

TESTMODE > PRINT	
Printing PG pattern	
Sub item	Description
PG-TYPE	Enter PG number
COUNT	Enter the number to be output
PHASE	Select 1-sided/2-sided
MODE	Not used
THRU	Not used
DENS-M	Not used

TESTMODE > PRINT	
Printing PG pattern	
Sub item	Description
DENS-C	Not used
DENS-Y	Not used
DENS-K	Not used
COLOR-M	Selection for each color is available The selected color (ON) is to be output. Setting value: 1: ON, 0: OFF
COLOR-Y	Selection for each color is available The selected color (ON) is to be output. Setting value: 1: ON, 0: OFF
COLOR-C	Selection for each color is available The selected color (ON) is to be output. Setting value: 1: ON, 0: OFF
COLOR-K	Selection for each color is available The selected color (ON) is to be output. Setting value: 1: ON, 0: OFF
SIZE	Display paper size
PAPER	Display presence/absence of paper
MATERIAL	Display paper type
FACE UP DOWN	Not used
FEED	Selection for the pickup position
START	Start PG pattern print Execute output that has been selected above by pressing it.

16.5.4 FAX

16.5.4.1 FAX List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

<MODEM>

T-16-67

TESTMODE > FAX > MODEM		
Sub item		Description
RELAY-1	CML	Test ON/OFF state of NCU's each relay and port SW
	P	
	S	
	H	
	D	
	R	
RELAY-2	CI2	Test ON/OFF state of NCU's each relay and port SW
	C1	
	NOR	
	DCSEL	
	DCLIN	
	IPSEL1	
FREQ	462Hz	Close DC circuit to deliver the selected frequency using the modem's tone delivery function.
	1100Hz	
	1300Hz	
	1500Hz	
	1650Hz	
	1850Hz	
	2100Hz	
G3TX	300bps	Close DC circuit to deliver the selected signal pattern with the selected frequency using the modem's G3 signal delivery function.
	2400bps	
	4800bps

Key, wheel, LCD, LED, and flicker check		
Sub item	Description	
KEY CHECK START	Key check Check the operation of the key on the control panel. The following table shows information displayed when pressing each key. When pressing the OK key after operation check, OK or NG is displayed in the following condition. OK: Operation was correctly performed for all keys. NG: A failure occurred to key operation. (Clicking the ► key displays the keys which have not been pressed sequentially.)

T-16-71

TESTMODE > PANEL	
Key, wheel, LCD, LED, and flicker check	
Sub item	Description
WHEEL CHECK START	<p>Wheel check Check the operation of the wheel. Turning the wheel clockwise increases the value, and turning it counterclockwise decreases the value. (Values are displayed in the range from 0 to 23.) When pressing the OK key after operation check, OK or NG is displayed in the following condition. OK: Entry was made with more than 12 consecutive clicks counterclockwise, and with more than 12 consecutive clicks clockwise. (Refer to MEMO.) NG: Requirements for displaying OK are not satisfied. (The OK key was pressed with clockwise or counterclockwise operation only.)</p> <p>MEMO: - 1 click increases/decreases the value by 1. - The wheel rotates 360 degrees with 24 clicks.</p>
LED CHECK START	<p>LED check Check the LED operation. Every time pressing the OK key after LEDs are completely turned off, the Start Key Lamp --> Execution/Memory Lamp --> Error Lamp light up sequentially. When pressing the Return key in midstream, LED check stops and NG is displayed.</p> <p>MEMO: The main power lamp lights up constantly.</p>
LCD CHECK START	<p>LCD check Check the LCD operation. Every time pressing the OK key, colors are displayed on the entire LCD in the order of black-->white-->red-->green-->blue. When LED check is completed, OK is displayed. When pressing the Return key in midstream, LCD check stops and NG is displayed.</p>
FLICKER CHECK START	<p>Flicker check Adjust and check the LCD flicker. Adjustment can be made by changing the setting value. Perform operation in the order of "FLICKER ADJUST -> FLICKER MIN/MAX -> FLICKER CONFIRM".</p>

TESTMODE > PANEL	
Key, wheel, LCD, LED, and flicker check	
Sub item	Description
FLICKER ADJUST	<p>Adjust the setting value. [Adjustment method] 1) Press the OK key. 2) In the setting value entry screen displayed, press the OK key again. 3) Increase or decrease the setting value to minimize flicker in the flicker screen displayed. (◀ key: The value decreases. ▶ key: The value increases.) 4) When pressing the OK key, the setting value is displayed in the setting value input screen. 5) Press the Return key and complete adjustment.</p> <p>Setting range: 0 to 33 [Factory setting value: Varies depending on the machine] [Value after clearing of RAM data: 15]</p> <p>MEMO: A setting value can be entered in the setting value entry screen, using numeric keys. However, to reflect the setting value, it is necessary to display the flicker screen once after the value is entered.</p>
FLICKER MIN/MAX	<p>Specify the minimum/maximum setting value to make an adjustment.</p> <p>MEMO: After setting is completed, the setting value which was displayed in FLICKER ADJUST is changed to the average value of MIN and MAX.</p>
MIN	<p>Set the minimum setting value. [Adjustment method] 1) Press the OK key. 2) Increase/decrease the setting value to minimize flicker in the flicker screen displayed. (◀ key: The value decreases. ▶ key: The value increases.) 3) When pressing the OK key, the setting value is displayed. 4) Press the Return key and complete adjustment.</p> <p>[Factory setting value: Varies depending on the machine] [Value after clearing of RAM data: 10]</p>
MAX	<p>Set the maximum setting value. [Adjustment method] 1) Press the OK key. 2) Increase/decrease the setting value to minimize flicker in the flicker screen displayed. (◀ key: The value decreases. ▶ key: The value increases.) 3) When pressing the OK key, the setting value is displayed. 4) Press the Return key and complete adjustment.</p> <p>[Factory setting value: Varies depending on the machine] [Value after clearing of RAM data: 20]</p>
FLICKER CONFIRM	<p>Check the setting. [Adjustment method] 1) Press the OK key. 2) In the setting value entry screen displayed, press the OK key again. 3) When pressing the OK key after checking the flicker screen, the setting value entry screen is displayed. 4) Press the Return key and complete checking.</p> <p>Setting range: 0 to 255 [Factory setting value: Varies depending on the machine] [Value after clearing of RAM data: 200]</p>

Chapter 17 Upgrading

Contents

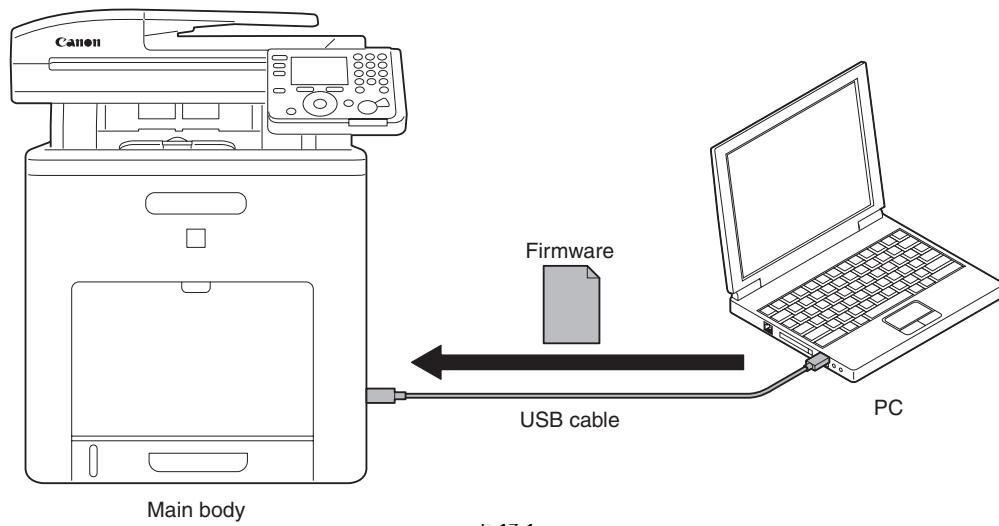

17.1 Outline	17-1
17.1.1 Overview of Upgrade	17-1
17.2 Making Preparations	17-2
17.2.1 Required System Environment	17-2
17.2.2 Before Upgrade	17-2
17.3 Downloading System Software	17-3
17.3.1 Downloading the System Software	17-3
17.3.1.1 Downloading Procedure.....	17-3

17.1 Outline

17.1.1 Overview of Upgrade

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

To upgrade this machine, download the firmware from PC to the machine with using the user support tool (hereinafter called UST).

Firmware Structure

T-17-1

Firmware	Function	Storage
BOOTROM	Main controller activation	Main controller PCB
BOOTABLE	Whole control	Main controller PCB
LANGUAGE	Language file	Main controller PCB
DCON	Control printer area	DC controller PCB

Depending on the UST version, Firmware can be less than above mentioned.

17.2 Making Preparations

17.2.1 Required System Environment

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- OS (any of the following)

- Microsoft Windows 2000 Server/Professional
- Microsoft Windows XP Professional/Home Edition *
- Microsoft Windows Server 2003 *
- Microsoft Windows Vista *

*: 32-bit processor version only

- PC

- PC that supports the foregoing OS
- Memory (RAM): 32 MB or more
- Hard disk; 100 MB or more
- Display: resolution 640x480 pixel or better, 256 color or more
- PC that has USB port

- UST file for the Machine *

*: Obtained from System CD and Service site's download. (Vary depends on the sales company).

- USB cable (USB1.1/2.0)

17.2.2 Before Upgrade

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

Remove all the connected cable (except for the power cord) from the machine, before upgrade.
Communication during upgrade operation may trigger errors.

- 1) Start PC.
- 2) Connect the machine and a PC with a USB cable.
- 3) Turn ON the machine and enter the download mode in service mode.
COPIER> FUNCTION> SYSTEM> DOWNLOAD
[USB DOWNLOAD AVAILABLE] is displayed on the control panel.

F-17-2

MEMO:

Click "Cancel" when [Found New Hardware Wizard] is displayed on PC screen.

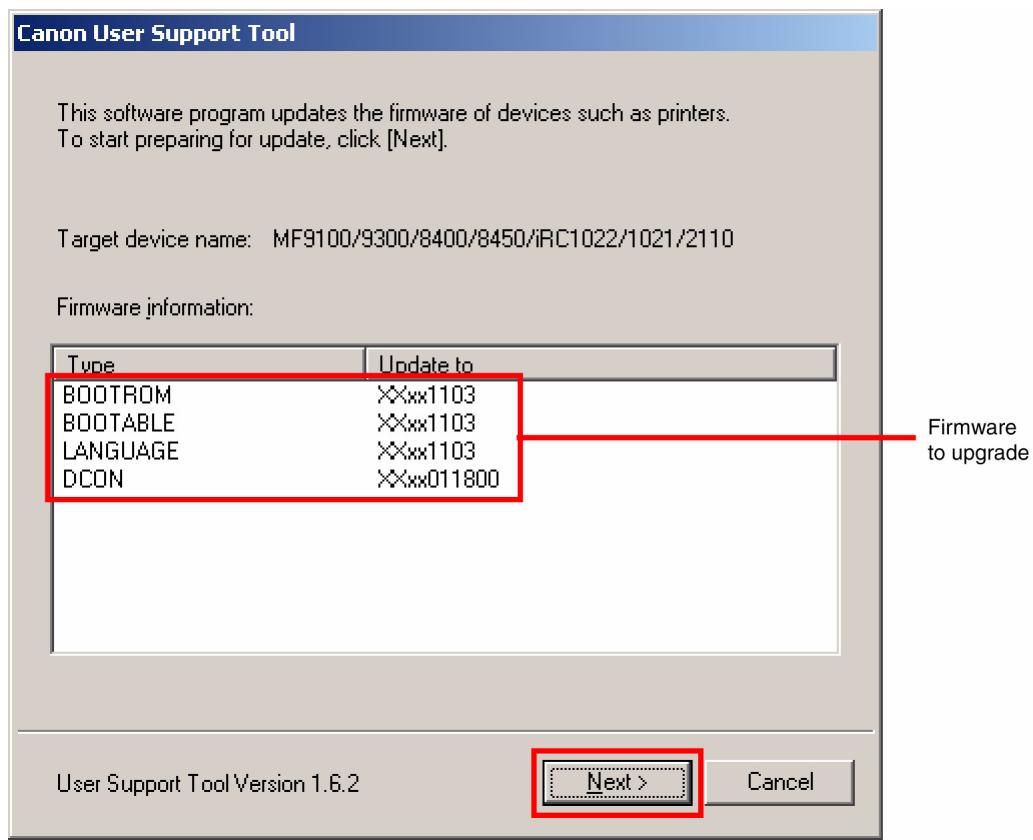

17.3 Downloading System Software

17.3.1 Downloading the System Software

17.3.1.1 Downloading Procedure

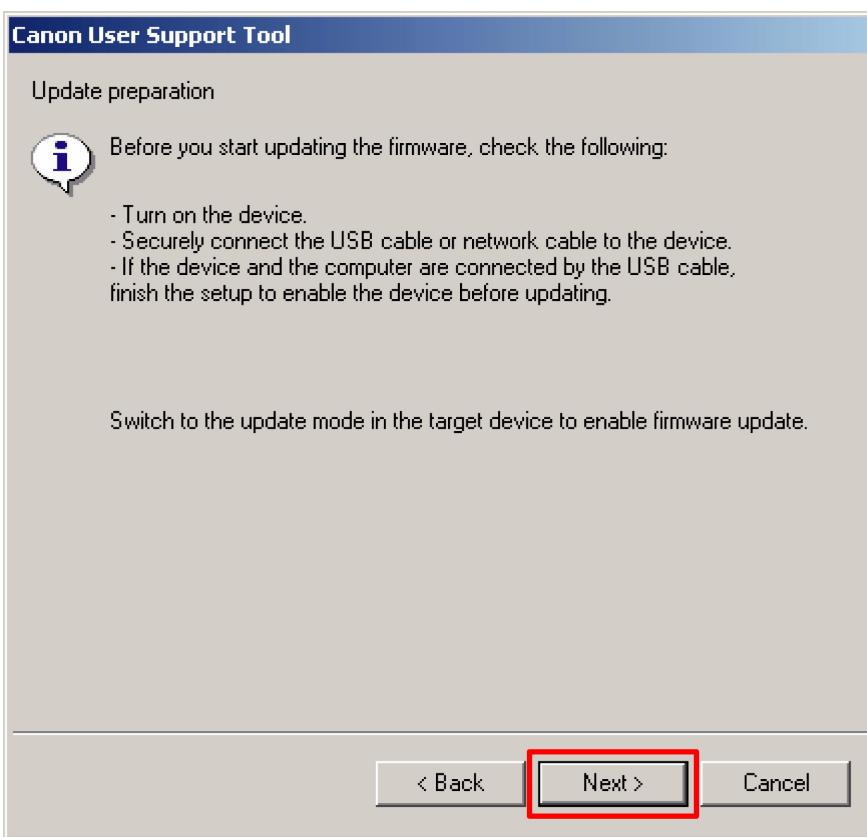

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

- 1) Open the UST (wlaaXXXX-ust-all.exe).
XXXX: firmware version
- 2) Note the firmware version that the current one will be updated to and click "Next".

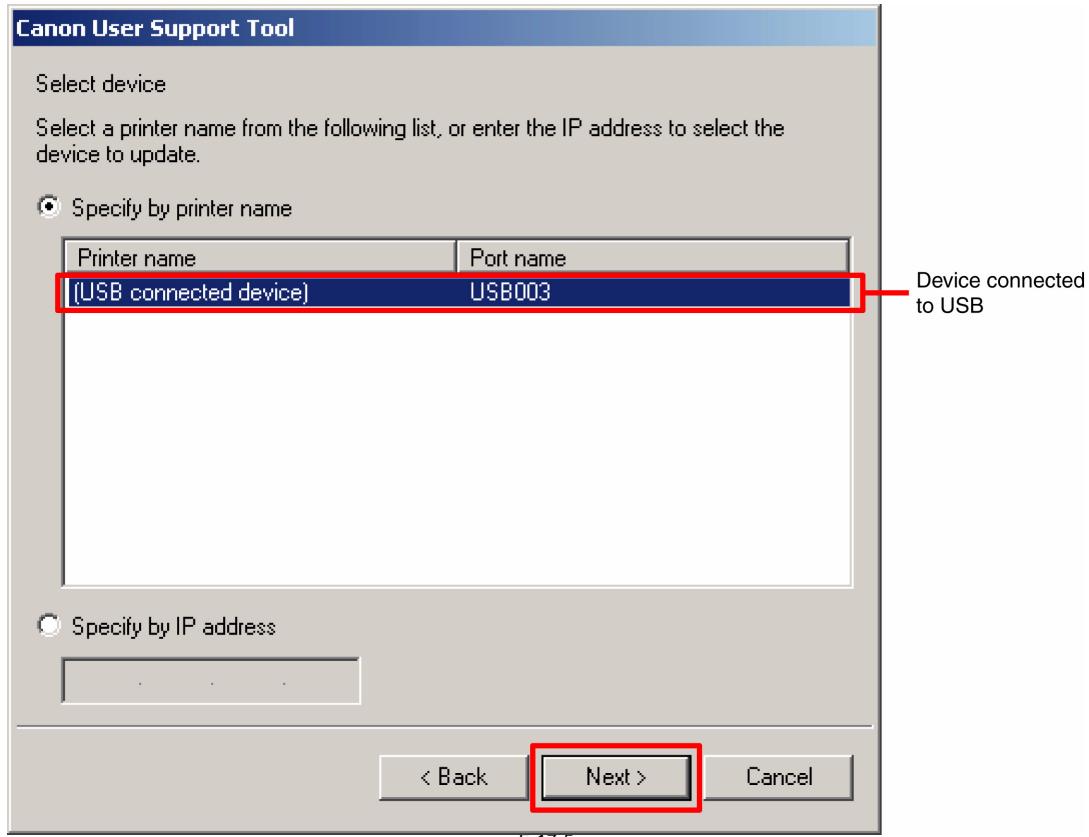

F-17-3

3) Click "Next".

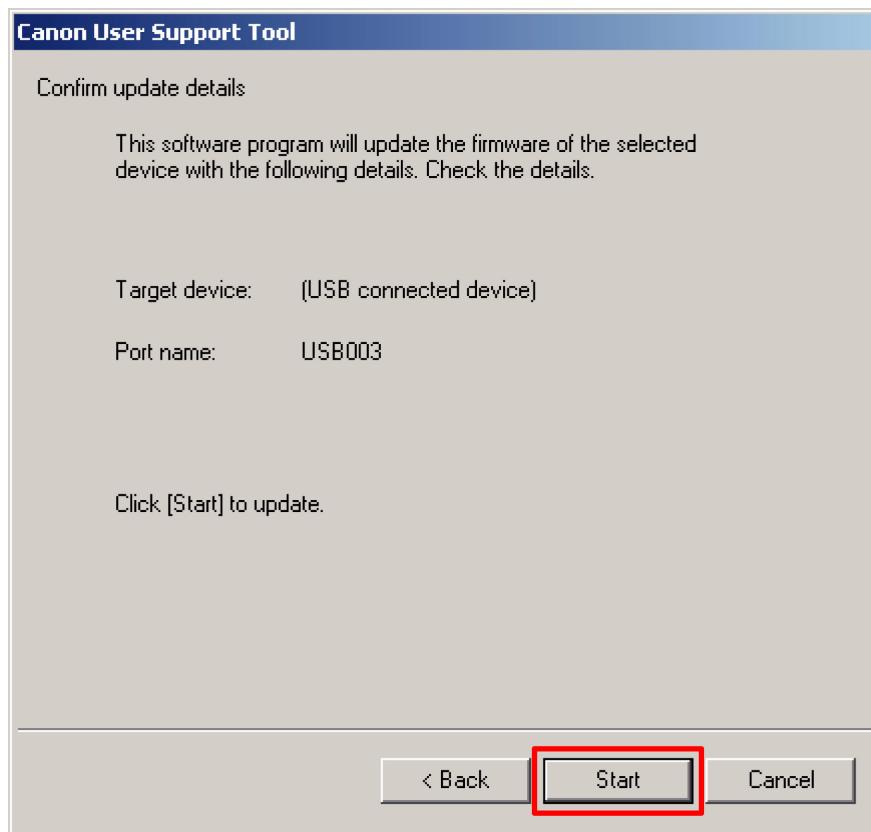

F-17-4

4) Select a USB connected device and click "Next".

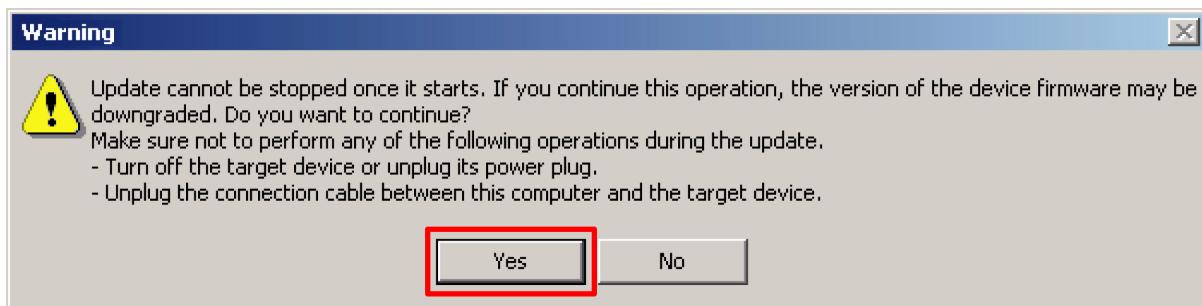

F-17-5

5) Click "Start".

F-17-6

6) Click "Yes".

F-17-7

Download will be started.

F-17-8

- 7) When download is complete, click "OK".

The machine restarts automatically.

- 8) Check that the firmware version is the same as the one checked in step 2) in service mode.
COPIER> DISPLAY> VERSION

Chapter 18 Service Tools

Contents

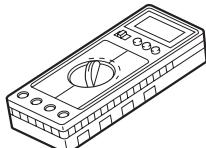

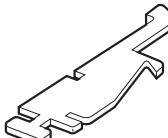

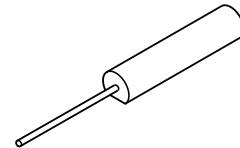

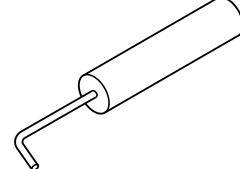

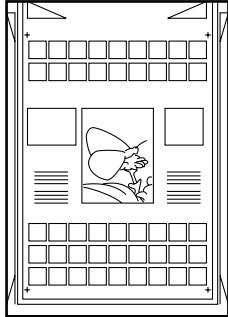

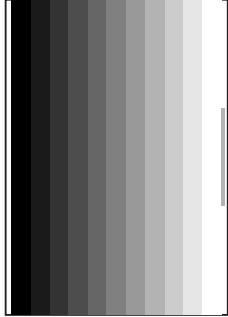

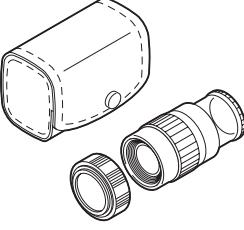

18.1 Service Tools	18-1
18.1.1 Special Tools	18-1
18.1.2 Standard Tools.....	18-2
18.1.3 Solvent/Oil List	18-2

18.1 Service Tools

18.1.1 Special Tools

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

In addition to the standard tools set, the following special tools are required when servicing the machine:
T-18-1

Tool name	Tool No.	Ctgr	Appearance	Remarks
Digital multimeter	FY9-2002	A		Use for electrical checks; for adjustment of laser power in combination with the laser power checker.
Cover switch	TKN-0093	A		
Tester extension pin	FY9-3038	A		Used as a probe extension when making electrical checks.
Tester extension pin (L-shaped)	FY9-3039	A		Used as a probe extension when making electrical checks.
CA1 test Sheet	FY9-9030	A		Used for adjusting/checking images.
D-10 test sheet	FY9-9129	B		Used for adjusting images.
Loupe	CK-0056	B		Used for checking images.

Ctgr:

- A: Must be kept by each service engineer.
 B: Must be kept by each group of about five engineers.
 C: Must be kept by each workshop.

18.1.2 Standard Tools

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

The table below lists the standard tools required for servicing the machine.

T-18-2

No.	Tool name	Tool No.	Remark
1	Tool case	TKN-0001	
2	Jumper wire	TKN-0069	With a clip
3	Clearance gauge	CK-0057	0.02 to 0.03 mm
4	Compression spring scale	CK-0058	0 to 600 g for checking the cassette spring pressure
5	Phillips screwdriver	CK-0101	M4, M5 Length : 363 mm
6	Phillips screwdriver	CK-0104	M3, M4 Length: 155 mm
7	Phillips screwdriver	CK-0105	M4, M5 Length: 191 mm
8	Phillips screwdriver	CK-0106	M4, M5 Length: 85 mm
9	Flat-blade screwdriver	CK-0111	
10	Precision flat-blade screwdriver set	CK-0114	6-piece set
11	Allen wrench set	CK-0151	
12	File, fine	CK-0161	
13	Allen (hex) screwdriver	CK-0170	
14	Diagonal cutting pliers	CK-0201	
15	Needle-nose pliers	CK-0202	
16	Pliers	CK-0203	
17	Retaining ring pliers	CK-0205	Applied to the axis ring
18	Crimper	CK-0218	
19	Tweezers	CK-0302	
20	Ruler	CK-0303	Employed to measure 150 mm
21	Mallet, plastic head	CK-0314	
22	Brush	CK-0315	
23	Penlight	CK-0327	
24	Plastic bottle	CK-0328	100 cc
25	Lint-free paper	CK-0336	500 SH/PKG
26	Oiler	CK-0349	30 cc
27	Plastic jar	CK-0351	30 cc
28	Digital multi-measure	FY9-2032	

18.1.3 Solvent/Oil List

imageCLASS MF9170c / imageCLASS MF9150c / imageCLASS MF8450c

T-18-3

No.	Name	Uses	Remarks
1	Ethyl alcohol	Cleaning - Plastic - Rubber - External parts - Oil and toner stains	- Procure locally - Flammable: keep away from flame
2	Grease	Apply to gears, shafts, bushings, and other sliding parts.	MOLYKOTE(R) EM-50LS GREASE Dow Corning Asia Ltd. (Tool no. HY9-0007)
3			MOLYKOTE(R) PD-910 LUBRICANT Dow Corning Asia Ltd. (Tool no. CK-8011)
4			DRYSURF 1340B HARVES Co., Ltd.
5		Apply to fixing unit	MOLYKOTE(R) HP-300 GREASE Dow Corning Asia Ltd. (Tool no. CK-8012)
6	Electroconductive grease	Apply to sliding parts where electroconduction deeds	MOLYKOTE(R) 41 GREASE Dow Corning Asia Ltd. (Tool no. CK-8007)
7	Thermoconductive grease	apply	FC4476CV

Do not use alcohol to wipe external covers. Use a moist cloth (well wrung) to clean them.
